Typical of people who feel so ineffective the only way they know how to resolve problems is through physical violence. The jails are full of people like that who abused wives, girlfriends, general friends, coworkers etc. Sooner or later they get their secret wish, and run in to somebody who is a bigger S.O.B. than they are, and there ends their unhappy story.

I'm reminded about a guy, who I used to know, whose brother was like that. He was in his early 30's and strong as an ox. One day he was in a hillbilly bar in down town Detroit, got a bit drunk, and proceeded to hit some little old man with a pool stick. Turned out the old guy was packing a 38 revolver and shot his tormentor three times in the chest. He's been resting in the White Chapel Cemetery for the last 25 years. The old man the police let run around on the streets for months because they were more interested in who he was dealing drugs with than closing a murder case right away.

The moral of the above true story is if you go around looking to pick a fight, it's not a question of whether you will find one, you will, the question is whether you will survive it. There is ALWAYS a bigger S.O.B. out there than you are. They just may not look like it until too late.

I don't try to subvert CBers into illegal activities either.

>so why do you hang out here?

The last I checked no reasons were necessary to post to this news group. And it is an unmoderated group so people will have to more or less tolerate opinions they may not personally agree with from any one whose wishes to post here.

Isn't this the email you sent me?

> Hi Frank... I e-mailed you a few weeks back to ask about links to your
> site.The site is up, and the links are in place. Please visit the
> site, as your comments and suggestions would be most......
<snip>

It's very clear that you would rather run your yapper and complain
about Voobner rather than get your facts straight. Maybe if I had
posted it myself you might have read it in an objective light, but
because it was posted by Aaron you label my opinions as "sick". That's
typical keyklown hypocrisy.

But you have the opportunity to redeem yourself, if you want. No
apology is needed, but if you can rise above the twistedhed mentality
and admit your error, I will never mention this incident again.

Whaddya say?

I didn't say that you had twisted ideas, but it is good that you realize that they might be. You must have missed the movie when Chuck Heston stood on the mount and received the ten commandments from God. That was a long time before Jesus was around. He didn't appear until the movie's sequel. By the way, since you are wanting to make some people better than other people, you need to take a hard look at the Bible and see where that all falls, and while you're at it, find the reference to God hating Communism. We're still all waiting for that one.

I believe you would call Jesus an extremist. The worst "extremist" is the Humanist, which has ruined our Christian Republic and turned it into into a communist Democracy!
I would indict the CIA for bringing drugs into the country instead of watching who they should of been watching to prevent the knockdown of those BIG tall Apple Trees in NYC !!!!
Dave!!!!!!!!!!!!!

What is this hang-up with the King James??? It was translated when about 2% of today's ancient manuscripts were known, cribbed heavily from the Geneva Bible which was used far more in our early history than the KJV, and contains buckets of obsolete English not to mention gross translation errors.

Incidentally, if it does not contain the Apocrypha, it ain't a real King James. These books were left over when the Jewish Bible was codified in AD 90 (the NT waited another 300 years) but had been in the Septuagint, the Bible of Jesus, which was the basis of the Latin Vulgate. The rabbis simply chopped off all the newer books; too bad they didn't get Daniel.

The Apocrypha is generally used by Roman Catholics and Orthodox Christians.
A quick once over about it can be learned in the link below.
http://members.aol.com/twarren13/apoc.html

Since from the New Testament writings there are no references of Jesus using
the Apocrypha, there is no universal support for the Apocrypha. Why would
God hide (from the Greek apo.kryp.hos or in secret) his word?

Response Below:

"Leland C. Scott" <Twistedhed-abuse@cotse.com> wrote in message
news:atOt7.5278$Gd6.93713@typhoon.mw.mediaone.net...

> Then why are you on a cb newsgroup Leland?

>So why do you hang out here?

Easy enough, I have and still do operate the cb. Though
none is hooked up. Take today, I was over playing golf
and my friend is a CB'er and we were doing DX all
over the place after the tournament.
Again, if you "dumped" cb why do you come to this newsgroup?

> I dumped Ham radio some 10 plus years ago, I don't hang out >n that group,
> nor do I try to subvert them into illegal >ctivities,

>I don't try to subvert CBers into illegal activities either.

Of course you don't, and you do try to point out the
legal aspects, nothing wrong with that.

> And it is an unmoderated group so people will have to more >or less
tolerate opinions they may not personally agree with >from any one whose
wishes to post here.

Ok, that wasn't the question, I never said that you couldn't
be here. I asked why are you on a cb group when you
despise cb, I was just curious, I didn't mean it as an
insult. I really haven't given you that hard of a time,
there are sometimes, the tech information you give is
quite good, but to hangout on a newsgroup, when you
don't even like the hobby just didn't make sense to me.

Ok.. I snipped most of this out so I could concentrate on this one point, because this seems to be a hang-up.

If someone is transmitting with a dirty radio that's "wide" (transmitting the same signal over multiple channels), this is bleedover. Front end rejection can't help that at all. As far as the receiver's front end is concerned, there's a signal coming in on that frequency.. and the receiver is correct.. but the signal that's coming in is the clipped, chopped off, incomplete (lacking a carrier and the opposite sideband) transmission of a dirty, poorly tuned, and/or overmodulated POS radio. This is most often the cause of "bleedover".

Front end overload is something that happens when you're trying to receive a distant signal, and there is another, closer, more powerful signal on a different frequency than the one you're trying to receive on. The front end is overloaded by the closer, not desired signal. This is not bleedover.

Big power doesn't have to bleed. I've been three houses down from someone running 500 watts on 37 LSB when I'm talking happily on 38 LSB with no problems whatsoever. His transmitter was properly tuned, and his amp was clean. No problems there... Before he got that radio tuned properly, he used to splatter and bleed over all 40. It wasn't the front end of my Cobra 2000 that was the problem there.. it was a dirty transmitter. How do I know? When he got his transmitter cleaned up, I didn't hear him even one channel away, even though my antenna and his were in each other's near fields.

You antennas were not in the "near field" if his house was several
houses away - not on 11 meters.

To Ray and all who have thought the same thing...

First off, CRN is not out to replace or duplicate REACT or other emergency services. CRN's intention is to augment (help and support) with their operations if they are available in the affected community. CRN allows a greater number of citizens to get involved in serving their communities. There are no barriers for participation.

1) CRN has no centralized authority or dues payments requirement.
2) Local CRN operations can be setup anywhere at anytime at a moments notice.
3) CRN is not only emergency communications but also information distribution about what's happening in the community.
4) CRN can be adapted to local needs since there is no strict charter.
5) CRN offers a standard that can be used during times of extreme emergency. Citizens with little or no radio training can listen or join without much effort.
6) CRN can be in places where there are no REACT teams available.
7) CRN hopes to be a proactive in that it plans for the worst and hopes for the best.

CRN requires nothing from any of its participants other than it set up and prepare their individual communities with emergency and informational communications so that a distributed network of its citizens can participate. CRN is a voluntary oppportunity for radio operators to supply a service to their neighbors.

1/4 wave counterpoise wire off the chassis might help reduce RFI and stray RF problems. Just run 8 1/2 foot copper wire of the radio case and lay it straight across the floor. This has helped me with microphone feedback and keeping a relay from locking up on cw in the past. It provides no electrical protection. The theory is a 1/4 wave length acts as an impedance inverter. If one end is open, the other end attached to the radio appears to be at RF ground. Good luck

Bill:

The near field is defined as being within three wavelengths by the FCC and OSHA for RF exposure compliance. On 11 meters, that's 33 meters, or close to 110 feet. His was the corner house, mine was third down on the right.. His antenna was on the closest corner of his house to mine, and mine was closest to his. Take the small "city" lots we had, and my antenna was indeed within his near field... Of course, this was a few years ago, and I don't have pictures to prove it, but that doesn't change the facts.

BOSTON MED STUDENT "TRAINED ASSASSIN" SHOOTS TWO MEN IN THEIR SLEEP

Slaying suspect ordered held without bail
BU medical student pleads not guilty

By Farah Stockman, Globe Staff, 3/8/2001

He was just a few months away from being a doctor. But the Boston University medical student bragged about being trained as an assassin by the Israeli military, and on Friday morning crept into an apartment and methodically shot two men in their sleep, prosecutors said yesterday.

Still wearing green hospital scrubs and shielding his face from television cameras with a white lab coat, Daniel Mason, 35, pleaded not guilty yesterday in West Roxbury District Court to charges he murdered Michael Lenz, 25, and severely wounded Gene Yazgur, 28. A judge ordered him held without bail after prosecutors told the court Mason had threatened to kill Yazgur, who was pressuring him to pay $118,000 in a court settlement awarded after Mason attacked Yazgur in 1997 during a traffic dispute.

Yazgur, a computer engineer, was wounded in the head, chest, and legs. He is in a coma at Boston Medical Center, the same hospital where Mason was training to become a doctor. Lenz, Yazgur's roommate, a graduate student from Minnesota, died of three shots to the head.

Robert Jubinville, Mason's lawyer, said Mason has been on medication, which could become a significant factor in the case. ''I am exploring what medication he is on and what it is for,'' Jubinville said. Shocked BU students described Mason as a private, extremely religious man who gave out tickets to temple during Jewish holidays.

But before entering medical school in 1994, prosecutors said, the student from Worcester had spent five years in a special commando unit of the Israeli military. Mason told friends he had been ''specially trained to carry out assassinations,'' and evidence found in his apartment was ''consistent with that claim,'' Suffolk Assistant District Attorney Josh Wall said.

Mason told a friend he would kill Yazgur hours after receiving a court order on Thursday directing him to start paying the $118,000, Wall said. Yazgur's lawyer also was allegedly threatened. ''He made statements that they were not going to receive the money,'' Wall said yesterday.

''His threat was, `I'll kill them first.'''

According to Wall, Mason borrowed a black knit hat, took a 9mm handgun he'd had purchased in 1992, and drove to Yazgur's Jamaica Plain apartment around 5:30 a.m. Friday. He allegedly shot Lenz in the temple as he slept in a room stacked with books of poetry. Then he allegedly entered Yazgur's bedroom and shot him through the chin. When Yazgur woke and tried to flee,Mason stopped him with shots to the chest. Then as Yazgur lay on the floor, Mason shot him in each leg, expertly breaking each femur, Wall said.

Before leaving the apartment, Mason turned his gun on a dog Yazgur had brought back with him from a trip to Alaska. Wall alleged that after the shooting, Mason also tried to arrange a false alibi, asking a friend to tell people he had been at home that morning. He also told a friend: ''Don't worry about the apartment. They won't find anything. It's clean,'' according to Wall.

Mason's mother and father sat rigidly during the court hearing near the defendant's two brothers, who wore white shirts and yarmulkes. After the 1997 attack, Mason was convicted of assault and battery and placed on probation. Several months later, he had a violent argument with another person in Brighton District Court while waiting to see his probation officer, said a source familiar with the current case.

Mason was arrested Monday at Boston Medical Center while working with patients under doctors' supervision, according to BU officials, who added that the school was unaware of his past conviction. Mason was due to begin a pediatrics rotation at North Shore Children's Hospital on March 13. Because of Mason's military background, police took extreme precautions before his arrest, not releasing the name of the hospital where Yazgur was recovering out of fear for his security and sending a police car to the house of Jefferson Boone, Yazgur's lawyer in the civil case. Boone said the future doctor would have had 20 years to repay the $118,000 debt, with 12 percent annual interest.

But Boone said Mason swore ''You won't see a penny'' on the day the judge awarded the settlement. Lenz was a graduate student at the University of Massachusetts at Boston who dreamed of publishing his own poetry, friends said. He had just moved to Boston this fall from Paynesville, Minn. His body was returned yesterday to the farming town of 2,000, where a funeral was scheduled for tomorrow.

Yazgur, who moved to Brookline from the Soviet Union as a teenager, loves rock-climbing, dogs, and parties, his friends said. The night before the shooting, Yazgur had stayed up late, drinking cocktails with Lenz and a downstairs neighbor. Thoughts of the settlement were far from his mind, friends said. ''He didn't expect to see any of that money,'' said a friend who asked not to be identified. ''But he didn't expect that guy to come after him either.''

Anne Barnard and John Ellement of the Globe Staff contributed to this report. This story ran on page 1 of the Boston Globe on 3/8/2001.

© Copyright 2001 Globe Newspaper Company.

--

When have you read a news story more sensational, shocking and compelling then this? Did you notice the date? March 8, 2001. Yet you haven't read about this in your paper. Think if you can about the dozens of stories from around the country that have appeared in your newspaper since March 8, 2001 that are but a fraction as interesting as this. What is it that has kept this story from spreading across the nation? What has kept this story from becoming the talk of the country?

Here is something even more astonishing, this story has not even appeared in Boston's other newspaper the Herald! Go ahead; enter "Daniel Mason" into the search engine of the Boston Herald's archives. You will return nothing in your search. Enter the name of Mason's attorney and you will bring up a few articles but none about Mason. Yes the "nice Jewish boy" has a prominent Boston attorney defending him and still the Herald has not printed a story about this shocking murder case. Isn't that the way a certain "religious", "ethnic" group in America that seems to have a strangle hold on the government in Washington D.C. which it uses to siphon off over $6billion every year for Israel would also like to have it?

Daniel Mason is the "heart" and "soul" of the Jewish people. Daniel Mason is the King of the Jews. If you don't pony up $6billion every year for Israel the Jews will stick their thumbs into your eyes. If you don't give in after that they'll sneak into your house at night and fire bullets into you in such a way that you will die as Michael Lenz did and you will suffer as Gene Yazgur has.

Are you going to read about this in your "newspaper"? Are you going to see endless stories-or even one story-about Daniel Mason, the Israeli assassin in Boston on your TV? No, because the Jews own the media in America (http://natvan.com/who-rules-america) and they'll stick their thumbs into your eyes before they let you see Daniel Mason, the "nice Jewish boy" from Boston as he really is.

Want to know something even more astonishing? Daniel Mason is not going to spend the rest of his life in a Massachusetts prison. He will likely get a hung a jury and be released and within 48hrs of his release he will be in Israel before the prosecutor can file for a new trial and get Daniel Mason back into custody, and that's the last that some of the Boston public (not the Herald's readership) will ever hear about the Israeli assassin from Boston, the "nice Jewish boy" Daniel Mason.

If he is convicted the Jews will work tirelessly to appeal his case spreading favors and money throughout the judiciary until they can get Daniel Mason free on appeal pending a retrial and then he'll flee for Israel and that will be the last anyone will hear about him.

At least Americans won't hear about him. The Palestinian children will certainly know about Daniel Mason. They will feel Daniel Mason's thumbs in their eyes. They will feel bullets fired from Daniel Mason's American M-16 shatter their bones.

Hi Dave...

Why do you need another Christian to back you up? Do you not read the bible enough to give the references...

John 1v1
In the beginning was the Word, and the Word was with God, and the Word was God.

John 1v14
And the Word was made flesh, and dwelt among us, (and we beheld his glory, the glory as of the only begotten of the father,) full of grace and truth.

Voobner is the king of deception and the chief liar of the group. He imposes his thoughts and opinions on everyone who does not meet his standards or beliefs.
He has become the laughing stock of the group.Maybe someday he will realize that everything he thinks up is not the gospel.
Maybe he needs a laxative.

Dennis in GA.

No, you seem to have forgotten, my exact words...
> > > Aaron is one very sick person, and he should seek help.

You may try to twist my words, but that is exactly what I said.

So, you wondered why I had a disagreement with "Aaron", but not "Sparky".
Aaron was filling the ng with multiple copies of the same 22Kb message.
That's all it was, it wouldn't have made any difference what that message
was. I thought that Aaron would understand, but I found out that he
understands nothing but his own anger with the world.
"Aaron" only posts about what you cannot do, never any actual advice.
"Sparky" actually posted some useful messages, and was part of some good
debates, and so I assumed that "Sparky" was a genuine person, who just got a
bit angry at times (like many people do).

But now I see that both "Sparky" and "Aaron" use insults, foul language, and
false accusations of criminal activity. So how can anyone take either person
serious, I did once... and look where it got me.
Both "Aaron" and "Sparky" claim to be against illegal CB, but both are
willing to attack *anyone* who uses the newsgroup, unless they join in the
Trolling. The legal / illegal issue is just a cover for the Trolling, you
proved that when you claimed that you have "respect" for the terrorists
(obviously just to cause anger).

The simple answer is that "Sparky" can join "Aaron"... in my killfile.

Goodbye "Sparky".

Brainbuster.

> typical keyklown hypocrisy.

Boy, you really have got a hard on over Aaron. It's all about Aaron, and
anyone who disagrees with his warped ideas and tactics.

"Objective light"? No, it does not matter who it comes from, you
cannot justify the murder of 1000s of innocent people with the words "at
least they were willing to die".
The problem was that I was unwilling to just accept that "Sparky" was a
newsgroup Troll, but you proved the point.

You claim to care about the law, yet you say that murder is ok if the person
"believes in what they are doing". As I said, take your whining to the FBI,
see if they agree that the terrorists are worthy of their respect.

> But you have the opportunity to redeem yourself, if you want. No
> apology is needed,

Just as well, cos ya not gettin one.

However, I must apologise to the other ng users who made it clear what kind
of person "Sparky" was, and I didn't believe them.
Sorry chaps, I should have listened.

> but if you can rise above the twistedhed mentality
> and admit your error, I will never mention this incident again.
>
> Whaddya say?

As you see my giving people a chance and wanting proof before assuming that
they are a Troll as being "hypocrisy", then this will make your day...

Join your buddy "Voobner" in my killfile.

And to make sure that you do not think you are getting special treatment, I
have updated the site (with a couple of links less). I wouldn't want you to

go crying to your "gentleman friend".

So I can certainly rise above your mentality, or can you meet the challenge...
If you don't like what people post, block them, or just don't read them. But we all know, if you did that, you would lose your reason to be here.

Goodbye.

Brainbuster.

There are other mechanisms by which interference can be generated such as the mixing of two high powered signals, where either the sum or difference in frequency can fall in to one of the Hams bands. This mixing can occur either in the receiver's front end,
--

Hi Leland...

A good example of this was a certain british CB. The rx was so poorly designed that gain compression and cross mod were commonly caused by stations a mile or two away!
I have known cases where one persons voice could be heard on all 40 channels, but their voice had been cross modded within the reciever by another, stronger signal.

Here's a good one...
One CBer I know loves nothing more than to wind someone up, and he found a great way to cause arguments on the CB.
He had one particular (very local) person who he liked to "target" for wind-ups. What he did was to find what channel this person was on, then find another victim on another channel.
He would then work out what frequencies he could transmit on to cause cross mod between the target and the victim. Both parties would end up blaming each other, and he found this highly amusing.
Eventually the "target" realised that he was involved, but didn't know how he was doing it.

Regards,

Brainbuster.

Hello Haro:

You can easily pound a ground rod in the ground, and run a ground wire from the ground rod to the radios chassie. Not the best, but better than no ground. The ground wire being connected will not make any real significant increase in the radios performance. But will offer a path to ground for static noise that sometimes builds up on the antennas.

And offer some protection from near by lightening.

The radio will work fine without a ground wire connected, but I lived in England for a while and know what type of weather you guys have, I'd install the ground wire, and rod.

I have the coaxes (the outside shield is connected directly to the ground rod) from my antennas connect to a ground rod just outside my window, of the radio room. The hole grounding ball of wax needs to be outside!

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

Ranger RCI-2950, mounting bracket and power connector.

Heres a picture of actual unit: http://www.execpc.com/~jsmail/gifs/rci1.5.jpg

Coverage from 26-32Mhz. This is radio has AM/FM/SSB/CW modes. I changed the display to Blue and just replaced the battery for the 10 memory locations. Great sounding radio for voice. This radio does not come with manual but is easy to operate. Was moblie only for a short time and is clean. It has 5 small holes on top of unit where amp was mounted. This radio will need to be turned down if your intending to run it with a linear.

Heres a picture: http://www.execpc.com/~jsmail/gifs/rci1.5.jpg

This is a Ham radio so an FCC license Tech + or higher is required to transmit. Blah Blah Blah

Asking $175
-I'll pay shipping
-I take Paypal

26-32 Mhz CB is illegal in the USA as well as in the Emerald Isle.

Linears are illegal for CB in any country.

Go ahead. Make up all kinds of lame excuses. I will be glad to post
pages of rules from all countries.

Hi Bill, this is a CB newsgroup so you are advertising to CBers.

FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture, sell or lease, offer for sale or lease (including advertising for sale or lease), or import, ship, or distribute for the purpose of selling or leasing or offering for sale or lease, any external radio frequency amplifier or amplifier kit capable of operation on any frequency or frequencies between 24 and 35 MHz.

Hi Bill, this is a CB newsgroup, so you are advertising this to CBers.

Sinve your ad specifies the Yaesu comes equipped with an 11 meter
crystal and will do 100 watts output we assume you are aware of what
you're doing.

What kind of a ham sells gear to CBers with the intention of promoting
illegal activity?

-Aaron-

In a May 13 Public Notice, the FCC points out that it's a violation of
FCC regulations to import or market a transmitter designed or intended
to operate outside the amateur bands unless the equipment has been
issued a grant of equipment authorization for the radio services it's
capable of operating. The FCC says it wanted to clarify its rules on
equipment that's "intended to operate in various radio services in the
high frequency radio spectrum, including '10-meter' Amateur Radio
Service (ARS) equipment." The notice--directed to "manufacturers,
importers, vendors and users of these transceivers"--emphasizes that
transmitters intended for use by FCC-authorized radio services except
the Amateur Radio Service must be type-accepted.

Make sure they're wearing their Latex gloves, or you're wearing your's. You wouldn't want to catch anything you can't get rid of with a shot of strong antibiotic.

Hi there,
Is the potty working OK? Let me know, I have another go at it if it's still acting up.

Bill

The women will only get him infected, but the Pimps will beat him to with in an inch of his life, or stick a gun in his face, maybe even both, if the whores complain about him to their Pimp. On second thought he hasn't been robbed by a whore, or her Pimp, yet either.

I'm not even going to tell him all about the fact that half of all those so-called women (Curb Queens, Lot Lizards, etc.) are really guys on hormone shots, wearing wigs and bras.

When I sent that, you still had not answered my other questions, so there were a few trick questions in that message. My server only has recent posts available, but I do know you used "Forte Free Agent" version 1.11/16.235 I just wanted to see if you really were "Sparky".

As for the google search, yes I did one (it is really very simple, even for you). There is more than one "Tin Can", and one of them is in the UK. I assume that the "Tin Can" that you refer to is the one that has a message on their site. As I have already referred to this, I think you must have problems reading the text in front of you!!

So on to the header...

I didn't read anything nor hear anything about this article which is referred to below, in the news, but I'm going to offer my two cents for anyone who cares to listen.

I don't give a rats ass if you're Jewish, Christian, Muslim, Catholic, Buddhist, etc..
If you kill someone, that should NOT make the rest of that particular sect guilty of the same sin. There have been leaders of different faiths busted for theft, molestation, prostitution, etc. People who are supposed to set an example for others to follow.
A person's background means little. Be they black, white, Asian, Indian, etc., it doesn't matter. A murderer is a murderer and so on. Murder and other crimes know no background, race, sex, etc., nor cares. PEOPLE commit crimes, not color and religion. Just like GUNS. They don't shoot themselves. A PERSON pulls the trigger in most cases (except the freak accident cases). ALL of us have those in our groups who are guilty.

I know Jewish people who wouldn't harm a fly and bust their asses daily just to keep food on the table, same with Catholics and so on. Black and Whites too.They would also give you their last dime if you were truly in need. It isn't fair to put ALL on trial for the sake of the few. I don't like crime anymore than anyone else. IF someone kills, they should be punished. I don't care what color or background they are. We need to stop profiling the WHOLE of every race and background and concentrate on getting rid of those of society who create problems for the rest of the world. ONLY after we get rid of the diseased few thousand, can the millions live in peace. Yes, it is strange isn't it? A few thousand make things bad for the millions on earth who try to do what is right. Quit feeling sorry for those who mean us no good. Quit giving them the luxuries of home most of us bust our ass working to afford. They go to jail and live with Gyms, TV, Law Library, Internet, and medical coverage not to mention meals and a roof over their heads. Instead of classifying all for the sake of one. Think about that ONE who now gets all the amenities YOU bust your ass to afford, IF you can! ALL at tax payers expense. WE PAY THEM for their misdeeds with rewards. THAT is wrong.

A bad cop doesn't make the majority bad. A bad biker doesn't make the rest bad. A bad preacher doesn't make the rest bad. A bad trucker doesn't make the rest bad. A bad doctor doesn't make the rest bad. A firefighter who turns to arson for the thrill of a call doesn't speak for the rest of them. Let us QUIT classifying groups for the sake of one who does wrong.

As for being extremely religious, that doesn't cut any ice for anyone. AS I SAID, preachers and so on go astray. I've known people raised in supposedly good Christian homes. They didn't have a "Christian" outcome. Same with

Jewish and Catholic. People like sheep, DO go astray from the "TRUE" doctrines taught by that particular religion.

The next time someone is accused of murder, does it really matter if black or white? Jewish, Catholic, Christian, etc.? NO. The dead person is still as dead and the perpetrator should still be held accountable.

So, all the Blacks are guilty because one kills? All the whites are guilty because of one? ALL the Indians? The Jews? The Muslims? NO..... WE ALL have those among us who are not rational and do sick things against society. Some have spineless leaders who tend to suck people in to their sick way of thinking. To get the "followers" to do that which they themselves usually haven't got the balls to do.

ANY classification of a group, race or background based on the commission of a crime by ONE is unfair to the rest. Regardless of who you are, put yourself in that group being falsely labeled. Because at some point, YOU ARE! How does it feel? Not very good, does it? Think about it before you openly profile a persons "background" - again.
Be angry as hell at the person doing the crime. No one blames you for that. I certainly wouldn't. But don't blame ALL for the crime(s) of one.

My two cents.....

I think that most people here know a trick or two. What makes me suspicious
is when someone pretends that forging and multiple identities don't happen,
even though they know it does. What do they have to hide?

As you have said, internet names are not protected... Just like CB handles.
Anyone could set up an e-mail account using any name they like, as long as
the name isn't already taken on their ISP.
I do wonder how many *different* people there really are on this ng, and how
many use different identities.
But it's sometimes just harmless fun. If I want to have fun with e-mail
addresses, I have an e-mail account where I can choose any name I like before
the @, and know that nobody else will be using that address.

Regards,

Brainbuster.

And proof of your LIES.

That is the e-mail which you said you didn't receive, because the e-mail
address that I sent it to was closed down.
So you LIED, the address is still in use!

Brainbuster.

The CBer's Creed

As a Citizens Band Radio Operator, I recognize my obligations:

To the Federal Communications Commission and the United States of America, who believe that I am sufficiently mature to be entrusted with the ownership, control, and operation of a radio transmitter.

To my neighbors, who trust their lives and safety to my skill and judgment during times of emergency.

To my fellow Citizens Band operators, who depend upon me to follow established laws, good practices, procedures and courtesies.

To discharge these responsibilities, I will at all times observe the highest standards as a Citizens Band operator.

I will never knowingly cause interruption to Citizens Band stations engaged in communications.

I will be careful to avoid generating interference to radio and TV receiving equipment, and will endeavor to locate and eliminate interference to any such equipment which may emanate from my station.

I will transmit only to pass necessary and substantive messages.

I will make all efforts to make full and proper use of Channel 9, the National Calling and Emergency Channel.

I will aggressively maintain my proficiency as a Citizens Band operator and keep abreast of electronics and communication developments so that my operation, which largely depends on such knowledge, may be of the highest order.

I will conduct myself on the air to reflect credit upon myself, the Citizens Band Radio Service and my country.

I will constantly strive to keep my standards high.

I pledge adherence to these principles so that I may contribute my part to more efficient radio communications, and to advance the dignity of the Citizens Band Radio Service.

They've got to get past using 'relativism' as an excuse first, e.g. "stealing government frequencies is less a crime than armed robbery...so that makes it OK". Or "Illegal CB is like jaywalking or going 56 in a 55 MPH zone". The fly in their ointment is of course the heavy fines for abuse of FCC rules. They just don't compare to misdemeanor crimes. And I've never seen anyone make a recreational hobby out of continued, intentional jaywalking and/or speeding like they do with illegal CB.

Jesus was THE CREATOR (God himself in the flesh!) He was here 1st and the great I AM !

I just want to turn people to Rightousness instead of to wickedness, which Hollywood is doing. God hates Communism because it violates HIS LAWS. Which plank do you want evidence for? Do you think that God didn't mean it when he wrote in the 10 Commandments "Thou (YOU) shall not kill," when many commie leaders have KILLED MILLIONS to steal (Thou shall not steal) their property to put it in a commune, with the head commies controlling the slaves that live on it? Communism has made messed up societies that are the exact opposite of how GOD wants people to live. Name me one thing in communism that's good. There isn't anything good or rightous about it! Why do you egg headed liberals seem to always get EGG on their faces? Dave!!!!!!!!!!!!!

You feel that you can say all the time that I am one.....Now go and do
something about it douche bag! Find some fool dumb enough to actually listen
to you long enough without having the laugh in your face.
"WHAAAAAA.....He's selling illegal CB Radio equipment."
Your flat slimy rock is calling Boobner.

Geneva and King James are the most accurate translations. The Sept. is a perversion from Alexandria. The received text is more accurate.
The Apocrypha is not true scripture. Give it to the Rev. 17 & 18 Harlot !!!!!
Dave!!!!!!!!!!!!!!!

Haro-ing:
GOD made Earth and called it GOOD. You can't make it 'cause God did. You only have to have it if you want to walk & breath. You can't make earth because it is made already. Earth is different from the planets because God made us the CENTER of the Universe and made NO LIFE on the planets. For CB radio you need NO earth, other than to mount your antenna to something that sits on it! CB signal goes through earth, but not good through stone. Just unplug CB antenna in storm to avoid lightning strike and you need no earth, but a 4' ground rod connected to mast with alum. wire is good. IS Blutarski our hero, or is he buried in NYC ?

Assuming not a troll (and I will assume not), it would be an interesting question to pose to the amateur operators too. If some folk have progressed beyond stomping on mudducks or kerchunking repeaters or flaming CB or ham operators, who is honestly interested in actually helping others? (this might be a novel idea!)

Hi Phil,

If you honestly believe I am a troll, why don't you just ignore me?
Not only do you and the pro-illegal gang not ignore me, but you go out
of your way to answer me. That doesn't sound like a troll problem,
that sounds like a bunch of illegal numbskulls trying desperately to
shut up those that don't agree with them.

And here Jim you see the absolute impossibility of dealing with fanatics.

Reminds me of when the Satanic Verses by Solomon Rushtie came out several years ago (one of the world's truly unreadable novels) the Grand Mufti or someone went into the Lord Chancellor's office and demanded that Rushti be prosecuted for blasphemy.

When the LC pointed out that no one had been prosecuted for blasphemy in this century and a good part of the last one, the reply came down to I know all that but now we are dealing with the true faith. One does not debate the issue, his options are to show him the door or kill him.

Obviously you don't get out much. You should see all the
articles concerning street racing and such. There is a thing
called the Marin Run which happens every Saturday along
Highway 1. Well a few months back a CHP officer was hit by
a motorcyclist, so the CHP decided to crack down.
What did they do, well they equipped a suburban with a
video camera and went approx 25 mph and impeded the
flow of traffic, causing the motorcyclist to pass over a double
yellow line. Some 30 bikes were cited, two arrested, when
they got to court everyone was thrown out, and a law suit
is in the process over the arrest.
So think again over recreational hobby crud. It happens, let
the authorities take care of it, you are not an officer of the court.

Yes, as a real young child I remember going over
there with my parents, listening to him talk around the
world, it was so cool. Alas, since I grew up there
the person I went to see that lived down the street
was terminally ill, and has since passed. So I must
leave the weekend resort my wife and friends are
going to, and attend a funeral this Sunday.
If he's there I was pass on a message to him, but
I doubt it, since his wife passed some years back he
doesn't see much of the old friends anymore.

Are you allowed to operate on these bands? Not trying to flame, just
curious. If you are allowed to operate on these bands why not post you call,
maybe we could hook up on a late night 75 meter net.

I got a question for you, if you chose a screen name like "No Fear" then how come you are so scared to post your name or calls like the other amateur radio operators?

What gets me shark is that there is a slew of screen names used by maybe 2 people and all they do is bitch about what other people do, a real man with a real cause would stand up and do something but these guys just keep on stirring the pot, I have come to the conclusion that their real goal is really just to aggravate, I doubt that they could give a rats ass about what a CBer does.

I twisted nothing. Quit trying to avoid the facts -- you attributed
my words to Aaron, and that was evident from your posts and from your
email. Your conclusion that Aaron was "sick" was because you thought
he was the one that wrote that post. That, and your refusal to admit
your mistake, are just showing your true colors. I only wish I had
seen it before.

Who lied? I thought it was closed out. When you said your's didn't get
bounced back, I logged in from a pop3 server and grabbed the mail,
including about 100 spam messages.

Now quit trying to divert attention away from the fact that you fucked
up royally.

Now you are pushing it, brainfart. I never tried to justify murder,
and you should really go back and read my posts before making that type
of bullshit accusation. You are really proving yourself to be a real
asshole. You can blame all this on Aaron, but the fact is, that's what
you really want to do. You don't even want to think about what I said,
you would rather just blame Aaron for your mistakes. That's just like
a keyclown, blaming someone else for their behavior. Don't bother with
the facts, they will only complicate things. Don't ask questions, because
the answers might make sense. Just forget logic and reason, and blame
everything on the most convenient scapegoat available. Brainfart, YOU
are the one that is truly sick and needs help.

This is a Cb Ng, what do you care what my Call is? Why not ask some of the other illegal cb op's /hams who hang here to post his name and call sign. Better yet why not post your name and address if you have nothing to hide? clown town or is it peekaboo or is it dr kavorkian or is it... oh hell we know you won't your a amp maker and don't want anyone to know it.

No it never swings past 1500, just as you don't operate near the band edges
so as to avoid being out of band. I don't run the amp at or near 1500
because 1000 will do the same thing. Nice Try!

Oh so you are saying you have a call sign? What is it?
Post your call sign I give you a call on 75/80 today. Your not scared are
you? Nah you don't have one your an illegal keyclown who manufactures amps.
hell i even talked to a guy in ohio that has a 2 pill you made for him.

Please read the WHOLE Bible, Dave!!!!. Jesus wasn't around at the beginning. He didn't show up until the new testament. And what is the "and the great I AM" thing? Are you saying that you are as great as Jesus? This didn't make since.

Secondly, don't confuse what communists do versus what the basic principle is. I'm the number one capitalist in my community, but you said that God hated communism, and I did a word search of the Bible and couldn't find a reference. Please help out here. As for what some communists have done, well we can find some capitalists who have done the same thing. Since you once told me that your parents survived a Nazi concentration camp at the end of the war, you no doubt understand very clearly that capitalists can be as ruthless as communists.

I believe that the Bible encourages man to help each other through difficult times. Is this not so? This is a basic precept of communism. So that's your example, Dave!!!

this could read " I will make all efforts to make full and proper use of
Channel 9, the
Emergency Channel."
in the FCC regs there is NO mention of channel 9 being national calling
channel, it is the emergency channel always, I happen to know this reg on a

first name basis so to speak.

>
>- Bob, CRN

Bob,
A laudable effort, to be sure, some suggestions, if I may?

1.) There SHOULD be a charter - even if only a brief explanation of
mission and purpose. Why? In emergency situations, often only
"authorized" personnel are going to be allowed into the affected area.
The way you get "authorized" is by belonging to an emergency relief or
assistance organization recognized by area EMO officials. These
organizations are expected to have a clearcut mission, scope of
responsibilities and pool of resources

2.)There SHOULD be a national level of organization. This will foster
recognition outside of the network and camaraderie within the

organization. Even if it's just a matter of maintaining a list of local chapters.

3.) Training is essential. Emergency communications nets cannot afford to be tired up with untrained communicators. In an emergency, communicators need to be trained to recognize what information needs to be passed along, and what is useless chatter.

4.) CRN should pursue working relationships with remainig REACT and ARES groups. By developing a working agreement with other emergency communications organizations, a more efficient and dependable communications network can be formed, trained and maintained. Also, it's possible that by fostering recognition by these other groups that funding sources can be pursued (ie, sharing in the responsibilities of, and profits from organizing local hamfests and whatnot)...

Anyway, these are just a few that pop to mind...

Hey guys,

Couldn't this also apply to "discussions" of non-type accepted
equipment? I mean nobody's forcing anybody to read a discussion about
a RC-2950 or any other off-topic subject. I think Aaron's point is a
good one. Hmmm...

Hello All:

Who sells or has a few feet of Heat Sink Finned type material, either copper or aluminum.

RF Parts has some but I need a larger piece. I have seen the Finned Heat Sink material, in lengths that a cut off saw would cut.

Even a ported assembly that has water or oil cooling will be a plus.

Any and all help will be appreciated.

Jay in the Mojave

That's correct, just a few. I don't have to argue
with him anymore I proved he's a hypocrite by making
available the posts where he brags about owning
xforce amps and operating on illegal freq.
He's arguing with other people now, making
enemies everyday, so I'm going to sit back
for a while and enjoy.

If I am the criminal and you are the cop why would I post my name? You should be proud to post your real name. How can you expect anyone to look at you like a man on a mission when you hide behind a screen name? I am not the one who posts hundreds of posts on a NG preaching to everyone about their wrong doings. By the way, I have told you before I am not an amp builder like you assume, I am a hobbyist kind of like you, I like to play golf and admire all of my legal equipment.

What is your call so I can recognize you one the radio? I will pass all of this info to you over the airwaves. By the way I do not manufacture amps, If he got it from me it must have been a couple of years ago and you can bet it is not one of the so called splatter boxes.

what is so good about these radios besides maybe collector stuff??? i
always found them to have pretty good audio but that squeal is just
too much and i heard they have absolutely no adjacent channel
rejection ....so $500.00 and rising,,,,geez.....give me a break for a
old radio that is probably over 25 years old....only on
feebay.........

Thanks to all who've emailed me privately and posted here. Its good to hear both the good and bad points being brought up about CRN.

Here's some clarification about CRN:

1) Many REACT members have emailed me using various "tones of voice". CRN is not poised to replace or usurp REACT. In fact, CRN could possibly bring in interested community service operators into REACT's membership. REACT does provide a valuable service. But many people aren't interested in joining an organization (as my private emails show). REACT's value is not being disputed, but recognized. My belief is that REACT will actually be one of the benefactors of CRN over time.

2) CRN is not really an organization. CRN is an initiative to get communities networked together during times of extreme emergency. You'll know that by going to CB channel 11 you can get in touch with local operators interested in helping.

3) CRN should not be used to replace existing emergency services. No one should expect CRN to pass sensitive traffic from agencies. But, CRN should be available to communities who want to stay in touch with each other. To help disseminate news to each other and offer support to each other.

4) CRN could be used for emergency services IF NOT OTHER METHOD IS AVAILABLE.

5) CRN hopes to have large number of community members talking to each other. On-the-air drills could provide some measure of operator training.

6) CRN is about communities helping themselves. It is not unforeseeable that a municipality could be paralyzed and in need of just this kind of assistance from its residents. Every community needs to evaulate their CRN and make it work for them. CRN can be offical agency approved or it can be an interested group of affected citizens desiring to protect and serve their neighbors. The idea of CRN is to maintain flexibility so that it serves the community best.

7) CRN is 101% voluntary. We only offer an option that has struck quite a cord with this newsgroup. We are open to improvements.

My personal thoughts are that CRN could use some more standards and possibly a guidebook of some sort. I hesitate to use the word charter as it implies a strict set of requirements that members are bound to uphold. I'd like to see CRN evolve through community cooperation and local adjustment.

It is very pleasing to see so much positive thought and enthusiasm.

- Bob, CRN

Hi Jay,

I would check with someone like Altronics in Southern California (NOS and Surplus) or McMaster Karr if you want to buy new.

The nice thing about living near a large city is the part sources.

cheers
skipp

Shooting victim fights to rebuild his body, his life

By Farah Stockman, Globe Staff, 8/12/2001

The eight bullets that riddled Eugene Yazgur's body met their marks with an assassin's precision: One entered the 28-year-old's nose, breaking his teeth and shredding his tongue. Another pierced his liver. Another ripped into his arm. Still another snarled just shy of his spine. Two more snapped the femurs on each leg.

In the predawn shadows, the masked shooter fled the Jamaica Plain apartment, leaving Yazgur's roommate - a young poet - lying lifeless in his bed and Yazgur's dog dying on the floor. The only sound was the voice of a 911 operator echoing through a cellphone into Yazgur's ear.

''I can't hear you. I can't hear you,'' the voice said, until the cellphone went dead.

At the hospital, doctors told Ellen Yazgur that her son had been shot so thoroughly, so skillfully, that he had less than a 1 percent chance of survival.

But in defiance of those predictions, as if out of spite for the attacker himself, Yazgur survived.

Now, as he prepares to testify in October against the medical student and former Israeli Army sniper charged with the March 2 shootings, Yazgur is rebuilding himself, bone by bone, hoping that his body's victory will translate into another kind of triumph.

''I want to laugh in his face,'' Yazgur said of the day he will face Daniel Mason in court. ''I just don't want to walk in there with a cast on, or roll in in a wheelchair. I want to be standing.''

It won't be the first time he confronts Mason in court. But by now he knows better than to expect an answer to the question of how an unremarkable traffic dispute, the kind that happen every day, allegedly escalated over several years into a bloodbath.

Dangerous encounter

It was Moving Day, Sept. 1, 1997, and like most streets in the college neighborhood of Cleveland Circle, Orkney Road was clogged with moving trucks, U-Haul vans, and Hondas with futons strapped to the roof.

Yazgur, a 5-foot-6 mountain climber who had emigrated from the Soviet Union as a teen, was working as a mover. He double-parked his truck, and behind him, an impatient Boston University medical student named Daniel Mason, who was also moving, yelled out of his car that he couldn't pass.

Yazgur shouted back that he would move the truck in five minutes. But Mason, of roughly the same height and build, got out of his car and yelled that he would move it himself. After a quick scuffle, Mason grabbed Yazgur by the throat, pulled out a packing knife and nearly severed his earlobe, according to police.

Mason had been arrested previously for threatening to kill a girlfriend and beating a man in a dispute over gym equipment, and would later spend time in jail for pressing his thumbs into the eyes of a stranger who wouldn't stop jingling his keys while waiting in a line. For the attack on Yazgur, Mason was convicted in 1998 of assault and battery and given a suspended sentence.

In June of 2000, a judge in a civil case ruled that Mason owed Yazgur $118,000 for the injuries. After the judge announced his ruling, Mason, who had represented himself in court, closed his briefcase, looked over to Yazgur, and snarled, ''You'll never see a penny,'' said Jefferson Boone, Yazgur's attorney in the civil case.

''I expected that once he was faced with this humongous judgment that he would do something, that he would appeal,'' said Boone.

But he didn't.

On March 1, Mason was served with an order to start paying. Before dawn the next morning, a masked killer crept into Yazgur's apartment and methodically shot, with exploding schrapnel bullets, every living creature he found there.

Michael Lenz, a 25-year-old graduate student at the University of Massachusetts at Boston, died instantly from a bullet to the temple.

Yazgur, who was first shot through a closed bedroom door, eventually caught sight of the masked shooter and clung on to consciousness long enough to call 911 and be carried to the hospital. He finally closed his eyes - some emergency room staff thought for good - at Boston Medical Center, the same hospital where Mason, a scrub-clad medical student, was led away in handcuffs three days later.

Police began investigating Mason after Boone notified them of the long simmering battle and the fact that he had just had the payment order served on Mason.

Although Mason, now 36, had told friends he was haunted by his experiences as a sniper in the Israeli military and had turned to medicine so he could ''save lives rather than take them,'' prosecutors contend that his experiences in both lines of work made him a perfect assassin, knowing exactly where to shoot to cause the most pain.

Yazgur spent the first month in a coma that doctors induced so he would not feel their knives removing leg muscles he'd jogged hundreds of miles to build.

Full consciousness found him in a bed at Spaulding Rehabilitation Hospital, where his arms, once powerful enough to hoist himself up mountains, could barely part the curtains of his window. The window revealed a view of the Nashua Street Jail, where Mason sat awaiting his trial.

''You know he's in there,'' Yazgur said from his hospital bed, gesturing to a visitor. His legs were strapped into ski-boot style braces. ''What if he's looking out at me?''

Some of Yazgur's doctors worried about his mind. One trauma specialist said, ''He can learn to walk again, but will he learn to walk down the street again and feel safe?'' - but Yazgur focused on his body.

And he continued to fight for full recovery. The medical system that miraculously saved his life turned into a Kafkaesque struggle with insurers.

Yazgur fought Blue Cross Blue Shield, which he said planned to release him early. He fought doctors who encouraged him to wait on certain procedures because of backlogs and other reasons. He fought with the therapist who refused to work with his barely moveable right hand, Yazgur insisting it could be repaired.

Miraculous recovery

Nearly six months after the shooting, Yazgur walks on legs hugged by braces. Nearly every day, he makes the several-block trek from the Fenway neighborhood where he lives with his grandparents to his daily medical appointments. He winces, flashing teeth that are still under construction, when he passes a motorcycle that reminds him of the one he used to ride when he was living in Alaska. His liver, as obstinate as the rest of him, has regenerated itself. His hands - which have been his lifeline in all his jobs, from hauling nets of salmon to moving heavy furniture to, just before the shooting, writing computer programs - are now learning like an infant's how to do simple things.

''It's a total miracle,'' his mother, Ellen, said.

Despite the breathtaking achievements of a dozen different surgeons and physicians, his body is still a work in progress, and Yazgur is far from satisfied.

''I still have a couple dates with Mr. Scalpel,'' he joked, balancing carefully on the stool of a local bar.

Even with leg braces, a cast, and the loss of 40 pounds, Yazgur still looks fit as he stretches his shirt tightly over his stomach and runs a visitor's hand over the hard plate of tissue that has formed there in the wake of many surgeries. He wants that plate removed because now it hurts to bend, and one day it could impede his rock-climbing.

''If they won't remove it, I'll find someone who will,'' he vowed, lisping through the space between missing teeth. But beneath the slowly repairing surface, there are clues that the mental recovery will take even longer. He

confesses to being consumed with anger when a passerby on a crowded street bumps him. An innocent query about his cast makes him want to scream. The sight of dog hair on his mother's pillow chokes him with grief, and the only request he has made of detectives is that they return the leash of his dog, Sampson.

''I told him, `You know you are not the only victim. You also lost your roommate,''' Yazgur's mother said. ''But I'm not sure it helps to say that.''

Meanwhile, the man Yazgur calls an assassin maintains from behind bars that he is innocent. His lawyer, Robert Jubinville, said Thursday that so far ''nobody can make an identification'' of the killer.

The prospect of a trial that could result in Mason's release haunts Yazgur, but he says as long as his body is rebuilt, he can face it.

Who would want to? If you want to restrict yourself to nothing but 'substantive messages' get your ticket. CB is for fun, been that way for years. If you want to do nothing but relay the status of the latest relay races by polio victims, get your ham ticket. I put off getting my ticket due to the overwhelming population of uninteresting old codgers with nothing to say. Go join them, they'll be glad to have you.

Why do so many people in this group want to nursemaid others and dictate policy, it doesn't make sense. All this is, is a discussion forum, who cares what other people chose to do. I don't think I've met a single person that would actually use a stock CB according to the arcane guidelines, they were from another time long ago. The only people that advocate the guidelines are ham operators, and frankly they all talk to each other a mile away using an Ameritron, so they are full of it. I've heard far worse operations on 40m than channel 19 offers in a traffic jam. 2m, heh if you can fit anything in between the taxi dispatchers, it's nothing but profanity and posturing there for the most part too.

It's all a crock.

That is what i talk on is a mark III. I think that it has outstanding rejection. A lot more so than any other cb type radio i have had. (galaxy, cobra, uniden) The other radio i have that i think is just as nice is a Tram d201a. Ok ok ok....so the squeal gets a little nuts. It's a browning thang!!!...Later

I owned my first Browning back in the late seventies and without a doubt it was the best talking radio I ever owned though I agree adjacent channel rejection was sorely lacking. There's a feel when operating a Browning unlike so many compact plastic encased rigs that were later manufactured. I'm no longer active in the hobby but if I was to return the radio I would buy would be a Browning Golden Eagle regardless of the price or minimal shortcomings.

Not to sound like a total dickhead but jews have been known to do such.
I being what you can say part jew understand what is going on in a way
that hits closer to home. Far as mafia control being partly jew that would
be sort of correct but misleading. Jews being of russian heritage are a bit
more criminal in some of there choices for the almighty dollar. I can agree
totally with that. Seeing it first hand. When you break it all down some
just consider it buisness. Yes it is a terrible thing and yes I wish people
were not as cruel but this is the real world. jews involved in weapons trade
not as much as you would think. Gambling , Prositution, Drugs maybe.
What is the big money maker are things like your ordinary bank. Friend
of mine 1/2 Russian 1/2 Italian ..from chicago are Jews and I can tell you
he told me some stories that blew me away. There family took over a
Bank and would give out High risk loans hoping for the people to fold
to sell the realestate or Keep it to turn a profit. Only took Authorities
to figure it out 6 years later but could not prove anything. Just that at
the time they were the only bank making a Huge Profits. After a few
years of the IRS in the basement adding it up, The Family approaching
500million or so net worth was finally told they would not be granted
the ability to run a bank. Now somemay not call that a good buisness
ethic. That is done on the Market every single day. People " borrow "
stocks from a brokrage sell them to someone for say 30 bucks per .
You hope the stock drops so you can buy the stocks back at say
20 making a 10 dollar profit. You only have to replace the borrowed
stocks. Your deal with the " lender " was for borrowing for numbers
of stock not for the price. I give you 10 apples you do whatever you
want with them. Later that day you give me 10 more apples. Does
not matter if a price changed. This is something done everyday.
Hoping a company does poorly for your own personal gain. Selling
short is a very good tactic though can clean you out.People
tend to forget buisness is not all smiling faces. Taking that and
look at that idea for one second. People who hope others
do terrible so they can profit.It all comes down to Morality.
How far will you go for the almighty dollar. Money does
not make you happy. Though helps if the bills are paid.

I agree wholeheartedly! The introduction of untrained ops would do more harm
than good. To mesh with the proven ES systems used thruout the country, training would have to be done. Like you mentioned, without said training and
proven stats as to what a group can do, you would be turned away from most disaster areas or refused access to information that would be passed by other
services. I might also add that the Incident Commanders and EMs might not WANT sensitive traffic passed via Citizens Band for fear of causing panic due
to its availability and ease of access to the public. That's not a slam, just that
emergency traffic needs to be passed securely and thru the least publicly acces-
sable means. Again, that is not meant to go against the public's right to know,
but it is important that messages are passed in a way so not as to cause alarm
in a widespread crisis.

Also, by the very nature of CB, it is not the best way, for example, for long distance traffic to be passed since 11 meters is subject to the whims of "skip",
the noise that is present when thousands of stations are on at the same time, perhaps, not aware that there is urgent traffic to be sent. Relays "might" not
be effective since the message could get changed in its movement thru many operators--like the old game "gossip" where a message is started at one end of a line, and almost invariably, will be different when it reaches the other end.
The local traffic is best handled via VHF/UHF FM, and long haul traffic is al-
ready being handled by other HF means such as Amateur, military, and Civil Air Patrol who have VHF capabilities as well. REACT also has access to GMRS, another effective UHF circuit for local emergency messages. You may not be aware of this, but many Federal Agencies, military, and CAP are capable of operating on each others' frequencies thru a program called SHARES. Ooops! I forgot US Coast Guard Auxiliary whose frequencies are also authorized for SHARES as well.

Your desire to help in crises is commendable. Might I suggest that you consider organizing local REACT chapters. I understand that they would welcome your participation and, I believe, this would be better since they have a long, well organized history of service, a framework that allows for

the training needed, and has recognition thru out the country with EMs. They would also provide all the assistance needed, guidelines, and organization skills for forming local groups.

Might I also put in a "plug" for Civil Air Patrol. The Civil Air Patrol is the USAF Auxiliary. Made up of volunteers, its missions are varied and widely
tasked in emergencies, natural disasters, and search operations. The members
wear the USAF uniform with distinctive insignia, and undergo professional training and personal development as they progress in rank and ability to serve.
CAP flies more than 80% of all air search missions done in the USA. For those who enjoy working with youth, there is a cadet program that gives teens from
12 to 18 training in teamwork, advancement, and opportunities to attend college thru scholarships, and/or the military academies. Prospective members are fingerprinted by the FBI, and pedophiles are not welcome. Adult membership is open to all US citizens of good character from 18 years up until one can't walk anymore. My Dad has been a member for 37 years and is now 87 years old--still a member tho his health is not good at the moment.
For people who want to serve in a patriotic, structured environment with train-
ing that not only qualifies one as a Civil Air Patrol officer, but provides training
that can enhance one's civilian career, CAP has slots for everybody. They range from Mission Pilot, Mission Observer, Administrative, Aerospace, and a host of others--including one area that is, obviously close to all our hearts.
C-O-M-M-U-N-I-C-A-T-I-O-N-S!! Yeah! Civil Air Patrol, as the official Auxiliary of USAF, operates a nationwide radio network that has a very interesting and fun environment. No, it is NOT a hobby, and has regulations that are somewhat strict, but you get access to frequencies that are governed by USAF Frequency Management as well as "certain" information relative to emer-
gency operations to which the public is not privy. CAP also operates on other
gov't frequencies, both State and Federal such as FEMA, Nat'l Guard, US Coast Guard, and others. Local frequencies, in agreement with State gov't, sometimes include Highway Patrol! During last year's hurricane season, NC Civil Air Patrol was operating in the aftermath of a hurricane that hit the coast.
Suddenly, a USAF hurricane spotter came up on frequency and requested a phone patch back to Keesler AFB, MS. Conditions were not conducive to an EAST-WEST path. This was quickly provided, and the spotter was most grateful. And the CAP operators were most tickled to have had this experience.
CAP radio operators have also been tasked directly by USAF for special communications assignments. The protocol is the exact same as USAF, so when tasked with an assignment, things go very smoothely. One task I

remember a number of years ago was assisting in low level USAF training route surveys. Traffic came to us in code and we had no idea what it meant--
we just passed it as it was given to us. Went like this: RD426, this is Stryker,
over." Reply: "Stryker, this is RD 426, over. "Roger, message #019 follows, Precedent=routine, DTG 10 1900Zulu, September, 88, break." "Roger, go". "Text follows----ALPHA, ROMEO, TANGO, FOXTROT, GOLF, JULIET
DELTA, OSCAR (REPEAT). End message, Groups 8, over." "Roger your message Number 019, out." This message is, of course, bogus, so it has no relativity or significance. But it is what we civilians get trained for in CAP--to
learn, to advance, to offer our skills as communicators, and above all, to SERVE. It is an excellent way to get involved and be at ground zero when the chips fly. Other venues, as I said, are USCG Auxiliary, REACT, and Amateur.

Thanks for reading this.

I think you're overreacting a bit, Dick.

I feel that "thumbing one's nose at the FCC" is not something that should be accepted, defended, or subtly encouraged with a wink and a nod.

If you call that "fanatacism" then I do feel sorry for you.

Bad analogy Dick. I am more than willing to debate the issue and
accept any reasonable logic for defying FCC rules. Problem is that the
pro-illegals don't really have any compelling reasons for thier
lawbreaking. They just want to do it and get away with it, even
though it is harmful (stealing frequencies, high power splatter and
spurs) to others.

Quite correct as the King James Version of 1611 is not what the King James version is today.
The Talmud is not a bad book either. Though there were about 1000 books not put in the " Bible".
I am a man who has faith but do not stick to one doctrune. As you can learn alot from them all.

If you can't read Peekaboo, keep you nose out of the conversation,. ts-tv
Landshark and I were talking about a amplifier i ordered for a friend, i
said it wasnt class ab when we got it, you spit out some BS "Who told you it
was not operating in class AB when you got it? I am
assuming you are referring to the radio." The problem is you assumed what i
was talking about, now you say what amp ? Well it is the amp I ordered for a
Ham in Western Pa he wanted to use on on 10 meters, it came class C, it is
no longer class C it is class Ab. Who told me it wasn't class ab, I figured
that out on my own. Is that any easier for you to understand? Now What?

So which is it you don't manufacture amps or you used to? No it is a class C splatter amp he said. What is your call how will I recognize you ? Will you be the one yelling Breaker breaker? If your a ham why are you afraid to give your call like everyone else does. You are probably easier to find in the DX directory than qrz.com
Whats the call OM?

I have obtained this information off the the net, but I need to know if I got the right info. To connect a D-104 to a Cobra 142:

Pin 1 - Shield/Ground (Shield and Blue)
Pin 2 - Audio (White and Yellow)
Pin 3 - TX (Red)
Pin 4 - RX (Black)

If anyone can confirm that this is correct, please EMAIL ME DIRECTLY. Thanks.

> bleedover, it's ONE reason..

Exactly, i never said it was our reference that a clean strong signal would not bleedover or cause interference is untrue. Receiver overload is interference caused by strong signals nearby. It has the characteristic symptom of being present no matter where you tune the receiver.
Harmonic radiation is emitted by all transmitters at multiples of the fundamental frequency.Harmonic interference is detected when intereference occurs only in isolated channels or frequencies. Harmonic interference from the HF bands can fall into TV channels. Poorly tuned antennas and transmitters cause harmonic interference.

Other reasons include poorly balanced amps,
> NPC mods, overmodulation, poorly tuned transmitters, and a multitude of
> others. Bill Eitner could probably go more in depth here, I'm not a
> radio tech.. I'm a general class HAM who also enjoys CB...
>

> No Fear, just because one reason could be the cause, doesn't mean it always is.. In my experience, frontend overload is rarely the cause of bleedover.. Overmodulation is more often than not the cause.

SSB, I never said front end overload is the cause, front end overload is a result of bleedover and over- modulation, strong signals these are causes of front end overload. They are a direct result of it perhaps that may clarify things. Thats why some recievers are better at rejecting "filtering" adjacent channel bleedover than others. A clean signal is of course prefered, it will result in less intereference to other stations than a dirty signal. But to say big clean power doesnt bleed over is not true, this may lead Cbers to think its also ok to use big power as long as "they think" its clean. What is the defenition of clean power? Thanks for the stimulating conversation it is better than most of what goes on in here figures it takes a Ham to have it.
Have a good evening.

Hi Bert,

Decent rig, appears to be the same as the Magnum 257, Albrecht 485, as well as some others. Here's a website for your viewing pleasure.

http://www.transmission1.net/cbradio/review-albrecht485.html

The radio shack is the FCC type accepted 40 channel version. Take care and 73.

Hi again,

I heard dits and dahs on channel 14 Saturday evening. Anybody I know? ;-) Anyway, I had an interesting thought. The 155.3 mi. rule is a Part 95 rule. The QRP stuff you're using for Morse is Part 15 gear being utilized under Part 15 guidelines. I don't believe that the 155.3 mi. rule applies to Part 15 services. Of course, I'm certainly no expert...but? It certainly makes an interesting thought. The ITU agreement applies to amateur radio, NOT land mobile (To which CB belongs. The "ITU" argument is just red herring.) and not Part 15 services either.

Hams make transatlantic QRP CW contacts so it stands to reason that you may very well catch a "propagational" wave that might "land" your 300 milliwatt signal in the receiver section of someone VERY far away. 300 milliwatts into a highly directional antenna, say a four element quad, could do the trick. I know you can't legally remove the supplied antenna, but you sure can attach it to coax via a sleeve fitting with relatively minimal losses. Those losses would be negligible compare to the amplification factor of a four (Or how about six...or eight?!) element quad or yagi. Jeepers, even the 5/8 wave vertical on the roof would more than compensate for the minimal losses. Seems to me it'd just be a matter of routing a length of coax with a sleeved fitting from one of the terminals of your shack's antenna switch. Thought's anybody? BTW, both your signals were clearly readable from a distance of 7 and 20 miles. (I don't partcularly care for the tone though. There must be a way to raise it in pitch a little.) Take care and 73.

And people want to know why others get so discussed with CB Radio and turn in to Ham Radio Operators. It's a real pity there are too many like your example operator out there, and even more weird why nobody cares about trying to get rid of problem operators like that.

Anyway more to the point the above example can happen just as easy with consumer electronics as well. I really get a chuckle when I hear advice on the group from one illegal operator to another saying more or less the following "If you run a clean signal nobody will notice you or care, just use a filter on the output of the....". No so. I ran across an interesting statement, I don't have it booked marked, where the FCC claimed they would not expand the official number of CB channels beyond the current 40 because the spread in frequency from a low numbered channel to a high numbered channel could easily end up being 450/455 KHz. The current Max spread is already 440 KHz, which is pushing it even now. That frequency, 450/455 KHz, is a VERY common IF frequency in many radios for the

general consumer market place. Two CB stations, running legally, could swamp a broadcast radio's electronics if close enough such that the two stations could be heard on the non CB Radio receiver. In no case is the production of ANY spurious signal required by either station for this to happen, thus any filtering etc. would be totally ineffective in curing the problem. Since at the time the request was made, to expand from the old 23 to the current 40 channels, CB Radio was so popular due to the release of a number of movies and music back then, the FCC felt the likely hood of the above to occur was too great to risk it.

No, more like 25 more years of being around and seeing a lot more than you have. Seriously Tim I'm not poking fun at you. I've been around and had some friends who liked the "rougher" side of life, and been to places and seen things you may never get a chance to.

Yeah, I had my experience with people who: sold drugs, did drugs, packed hand guns, people who have been shot and killed by guns, made moonshine, etc. Been around the world to various countries and had some military personnel point guns at a friend and me once for something he did stupid. Experienced 3 terrorist bombs set off in the city I stayed in, two in one night down the street from the hotel I stayed at, the last one about a month later, which destroyed a high voltage tower putting the whole industrial complex I was in out of work for the night. Eat food I couldn't even identify, as long as it didn't crawl off the plate by itself, etc. I would say that I look at things with a bit of a "different" perspective than you would Tim, at your age.

You have not proven a thing to me with what you have said SSb ::grin::
chuckle::grin::chuckle::

sideband wrote:
"Front end overload is something that happens when you're trying to receive
a distant signal, and there is another, closer, more powerful signal on a
different frequency than the one you're trying to receive
on. The front end is overloaded by the closer, not desired signal. This is
not bleedover."

What is it called then? haha That is a classic example of bleedover, it is
not harmonics, after all what is bleedover except splatter, interference
from undesirable signals.

SSB, maybe your dyslexia is kicking in Frontend overload occurs because of splatter and over modulation and high power signals, and over deviation, mis aligned transmitters. They are not the same thing Splatter causes the reciever to overload it can't handle whats happening. One is a cause, one is a symptom.
Go study the answers for the extra class.

I figured this guy could use the help of the Ng.

<-snipped->

"Hello all I deadkeyed 500 watts last night, but my neighbor said it was coming through his telephone, his TV and his stereo, I had read on the CB Ng that if you ran Big power it didn't have to bleed anything. I mean it wasn't over modulated that's for sure, It was dead nutz right on the freq./channel I was on. How the hell did this happen It was a class AB amp too Hell that's as clean as it gets in my book ! Heck the guy up the street who was listening to a few mobiles Qso only 7 channels away had said I bleeding him over because I desensitized/over loaded his receiver when I keyed up. How is this possible I am Clean I tell you Clean and that guy on the NG told me I could run big Power if I was clean. What do I do?
Sleepless in Seattle"

If all you did was add some biasing to the amplifier I doubt very seriously it is operating in class AB, more than likely in class B unless you went to the trouble to change the "pills" to a matched set then it will either eventually self destruct or it is operating in borderline class AB. in other words the amp you are referring to is still a splatter box if you are using it in SSB mode, make sure you utilize proper output filtering. I would try to keep the bias voltage at about .685 and constant, this will require a stiff regulator circuit. It will also require a lot of negative feedback and properly matched transistors, you might want to do something to the circuit to protect against thermal runaway, there is a crude way to this that is effective and easy.

: The near field is defined as being within three wavelengths by the FCC
: and OSHA for RF exposure compliance. On 11 meters, that's 33 meters, or
: close to 110 feet. His was the corner house, mine was third down on the
: right.. His antenna was on the closest corner of his house to mine, and
: mine was closest to his. Take the small "city" lots we had, and my
: antenna was indeed within his near field... Of course, this was a few
: years ago, and I don't have pictures to prove it, but that doesn't
: change the facts.

Maybe that is the case for RF compliance, but it isn't in the real
world. You will not measure any near field effects at a distance of
3 wavelengths from the antenna.

But that is just a nit, not really that important.

Thunderbolt 305 went for around $250 new but it's been at least ten ..
maybe fifteen years since I've seen one. Nice amp and larger brother of the
Thunderbolt 105 which I ran for close to ten years before leaving the hobby.
Both were ruggedly built clean sounding amps with oversized power supplies
.. the Thunderbolt 105 ran a pair of 6JE6C/6LQ6 tubes ... a bit pricy today
if you can find them, approximately $40 last time I checked with an true
output of 75-80 AM / 120-140 SSB. In a used market I would guess a fair
price would be around $125 for the Thunderbolt 305 depending on cosmetics
and condition of the tubes.

So where do you get AOL out of GST Telecom? And why the confusion with an address as simple as tincan.org? And if you wanted to find out if it was really me, why didn't you just email me? And why didn't you do that before you labeled my comments as "sick"? And what kind of excuse is the time your server keeps messages -- I thought you knew how to use Google -- they have the headers. That's too many questions, brainfart.

The real annoying part is that you will neither admit nor deny your mistake, you just keep making up new excuses and stories. And you are still ducking the original issue. That's lame.

I agree and I will do some research to see if it does or doesn't
apply. I've come to the conclusion though that no matter how well
intentioned your endeavor, someone will always try to rain on your
parade. Alan Dixon pointed out the ITU thing to me as well. I didn't
know that it did NOT apply to the Citizen's band service until just a
few days ago.

Ah, so some good ideas DO come from cell phone technology. (Actually,
it's a very old method. The "spark plug wire" technique.

> Thought's anybody? BTW, both your

Thanks for the signal report. We're about 7 or 8 miles apart and my niece is about 15 miles beyond me, so you're probably right in the ball park. The tone IS annoying, I agree. I haven't the time to see how to go about the fix for that. I'm almost sure it's as easy as a resistor swap. Take it easy and thanks for the "thought food."

Thanks Mark and Steve,

I won't be performing any mods on it, so no worries there. This is a
replacement rig for my niece. She's using an old tired Uniden PC-122
that's seen better days and I'd like here to get used to the concept
of frequencies rather than channels. If she gets her Tech "+"; then
the Lincoln is hers. Take it easy and thanks again.

That's where you're wrong...

Front end overload is an overloading of the receiver's circuitry due to
an overly strong adjacent signal.
Splatter is caused by a dirty transmitter. Splatter equals bleedover.
FEO does not.

But again, your closed mind must know more than my Bachelor's degree in
Electrical Engineering mind does.

Oh, I also double-majored in Computer Science, and finished both in less
than 4 years...

Can you honestly, and without deception, claim the same?

I think not, Aunti/N8-wannabe/alltherestyou'vepennedunder....

Meet /dev/null.. you're too ignorant for me to banter with anymore.

The bands are really hopping lately. Been on a 10 meter port - FM. It is amazing how totally clean a signal can be on FM. Talked with Australia about 4 to 6 weeks ago. Absolutely no noise or distortion. Then there was Josh, 6Y5WJ in St. Elizabeth, Jamaica. Europe has been pounding in. Openings can be fairly brief, or they can last quite a while. Australia was in exceedingly strong and noise free for probably better than half an hour. 11 meters should be at least as good if not better.
73 from Rochester, NY
Jim
--
"Hey, Jim! Yea, the skip is rolling on in. Australia as been coming in quite often. Last night California had me in the patch all the way home. I was getting what I thought was bleedover at first, on 26.295, then found the sidebanders on 26.300 were from Wales, both in mobiles. There are a few locals that meet on 815 and utilize strictly FM..I think it's a Yaesu crowd. Of course, many of the islands like Puerto Rico, Jamaica, Bahamas, etc., are bound to make it up your way sooner or later..they are always in our receive and we just don't even count them as skip no more. Glad the cool weather is coming..great DX is already following. With the colder weather come the yankees paying big bucks to be shuttled out to the river mouths to catch them fish. We had an entire contingency of Big Apple residents come to the harbor on friday with no reservations. Between 3 of us, we were able to get them out Saturday, Sunday, Monday and yesterday at half price for full day flats fishing. Only thing they had to do was show up. Turns out the youngest guy is assistant purchasing associate for a very well known upscale department store in Manhattan and was a cber back in the day. He got to wave a hand back to the big city from the boat and he spent over an hour chewing the fat while his compadres drowned some bait. Made some great new friends and we all have an open invitation to play in the Adirondacks at a cabin next summer. Hmmm, I hope the old Antron is still in the back of the truck in the tool box."

Religions supposedly teach peace and love your neighbor. In the history of the world most wars have been fought over religious beliefs, most of the fighting and terrorism in the world today is because of religious beliefs. More people have been killed in the name of religion than for any other reason. Maybe religion isn't such a good thing.

Your are the ignorant one. Front end overload is not necessarily
caused by splatter. It is caused by the receiving device not being
able to reject a strong signal that is not on the frequency the
device is tuned to. A television set can be interfered with
because of a nearby ham or cb transmitter that is not splattering,
but the tv set front end is being overloaded by the strong ham or
cb signal. It has nothing to do with splatter.

No Fear wrote:

leland, here you go again telling me about things youve heard from friends of yours. reminds me of when you used to talk about the russian guy down the hall. you know all that college your always boasting about? think your lucky stars you had that chance leland because not all of us had mommies and daddies to pay for books tuition and giving them a credit card to help out. from the way you talk i seriously doubt youve ever been to galveston texas or anywhere else that had potholes in the streets and crackheads on every corner. you seem the type that would do just about anything to drive around those neighborhoods because your scared to go thru them. some of those little countries u talk about dont have much on the shit that goes on here and everywhere else in innercity america. you dont have to tell me about real life or the real world. i told you before i left home at the age of 15 with no help from anybody but myself and managed to survive and eventually strive and do good for myself. drugs, guns, violence? man i dont know who you think you are sitting behind your desk telling me about these things. you had a gun pointed at you once? big deal leland, try standing in front of your friends house and getting shot twice in the leg while you watch him die right next to you or what about the other 8 close friends thats been gunned down over the last few years. i grew up without silver spoon in my mouth, got involved in the gang lifestyle at a early age and have had a very interesting life to say the least. some of those things you seen or heard about i was living on a daily basis. just rember you at the age of 15 and tell me where you ready to deal with life then, hell i have a feeling you werent even ready after 4 years of college if you even are now.

do you know what part of the country that amp was made in? i never
saw one before.....

283. New Marketplace @ Bigradios.COM

Newsgroup: rec.radio.cb
Date: 2001-10-03 17:02:29 UTC
From: Chris Schmidt <chris@devine.net>
Message-ID: <3bbb38cc@sys13.hou.wt.net>
Source record: 99295

BigRadios.COM has a new anti-flaming marketplace online and working as of now. If you need to Buy/Sell/Trade go there and post it as well as other places on the web to help you get it sold, it's free.

http://www.bigradios.com/marketplace

Also, please don't test the anti-flaming capabilities, the way the new board works is through a moderated mailing list, therefore any post or response to a post will have to pass through the moderator (me) first. I will have your email address, ISP info and all that in my servers log files if you attempt it. The last board allowed people to remain completely anonymous, which caused problems.

Give it try, let me know if it sucks.

Frontend overload can be caused from the purest unmodulated carrier if the signal is strong enough. Splatter generates crap all over the band and can be heard even if the signal is faint. Splatter does not cause the receiver to overload. The receiver is picking up crap that is on frequency.

Hey Landshark,

Yeah, I usually check in early before I go to work but I don't have enough time to sit down and type too many posts. Especially if I think they're going to be long. What happened to your "A day without a Buell..." message? We have a fella here that is waiting to take delivery of a Kawasaki Vulcan Drifter. I'm not much of a motorcycle enthusiast but I can appreciate the gleam of anticipation in his eyes. So yes, you might see some quick posts from me early in the morning. Take it easy.

Hey thats pretty amazing for a dyslexic, add person, So why were you driving trucks for a living? What school did you get your bachelors degree at ? I thought you said you were no tech no all of a sudden your an electrical engineer. Haha. The funny part is all my comments have been taken out of either the arrl books or other rf books. I just copyed them into my post so I guess all these guys are teaching the wrong thing. Perhaps you should be a teacher since you have a electrical bachelors degree. How's the truck driving business these days?

Twisted collects jock straps and you wear women's panties, how nice. That's my opinion.

>BTW,going to Kalamazoo Oct 21 ?

No because there is a better one on the same date much closer, and it's about twice the size of the Kalamazoo one. As a matter of fact that is the one where I took my Tech Exam at. I was rather disapointed in the size of the Kalamazoo swap last year. The swap in Van Wert is a joke. I'm not wasting my time going there again. The one in Lima I think has been cancled. The one in Mamee is about the size of the Fort Wayne swap which is a nice one to go to. The Findlay one was nice. I picked up another all mode UHF amplifier there along with a set of UHF beams.

I did. The review (taken from a ham mag?) calls it an "amateur radio".
Of course the website is for CBers. It promotes a slip-seat radio case
for truckers. It shows "adjustment" locations and mods for this rig.
With the 26 to 32 mHz coverage, more truckers than ever will end up on
28.085 and other ham frequencies. But you don't really care about
that.

Your bumper sticker ought to read "I Bootleg & Break The Law & I Vote
Too".

That's about true where ever you go. The last figures I heard for South Africa, for example, shows about 1 in 10 are infected with HIV. The cops here in the US don't like poking their hands in peoples pockets when doing a search. They are a afraid of sticking themselves with a dirty needle used by some addict with AIDS or infected with HIV.

Look at what happen with Magic Johnson. Nobody really wanted to get on the court with him and take a chance that some of his HIV infected blood, from a cut during a game, would get on somebody else and infect them as well.

Same goes for getting in to fights in bars etc. You might win the battle, but end up dead from AIDS some years later because the yo-yo was HIV positive, and you had his blood on your hands etc.

These days you can't be sure about anything.

From http://www.cbworldinformer.com/200109/200109.htm ---

"The focus of CB World Informerï¿½ was the area of conversions, modifications, out of band operation and other aspects of the hobby that CB Radio Magazine or Popular Communications wouldn't cover. "

There you have it. Conversions, modifications, out of band operation. Editor "Bob F" (no last name) doesn't say what the focus of the new web site is, but the number of "conversion and mod" articles is a clue.

Same old illegal crap.

You should REMOVE the imagery of the Capitol dome and the USA flag from the (I Work 11 meter DX) bumper sticker and fly a skull and crossbones as other pirates do.

> -Steve (extra class)
>

I'll second that as an Ancient Extra. Overload is a term used by those who
do not understand the situation. The problem is that the mixer requires
that the local oscillator be at least two thirds of the total signals in the
mixer. So inadequate LO injection is the most usual cause of receiver
fold-up. Second is a bandpass filter (or rf amp stage for that matter) that
lets in out-of band signals. RF amps typically allow another tuned circuit
and a good place to hang AGC; they do not amplify a hell of a lot. These
are hard to avoid in a broadband rig. Third is inadequate matching between
the usual ceramic filter and the mixer at frequencies out of the receiver
passband; a high SWR causes reflection back into the mixer.

A balanced mixer is used in good receivers because it does not pass either
the LO or the incoming signal to the output. Look at the 'third order
intercept' as a measure of the ability of the receiver to reject out of
passband signals. Most CB receivers stink including virtually all Rangers.

A strong local will cause some distress to CBers but not a decent ham rig
unless and until he starts spitting crap.

They were well manufactured amps, housed in a all steel cabinet black vented top and sides with a polished chrome front. Controls were variable load and tune, Power/Standby, Off/On, AM/SSB each having an oversized lighted output meter in the upper left corner. Don't have a clue where they were manufactured other than the Thunderbolt 105 I owned did display "Made in the U.S.A." on the back panel. They were quite popular amps back in the late seventies-early eighties in the Northeastern U.S. nearly every CB shop in my area carrying at least one model in stock the 105 being the most popular. If I recall correctly the models offered were the Thunderbolt 105, 305, 505 and 705.

FCC Enforcement Case Highlights FCC Amplifier Certification Rules
NEWINGTON, CT, Oct 2, 2001--The FCC's Riley Hollingsworth used the occasion of a recent Warning Notice to hammer home the FCC's position on the sale of RF amplifiers that have not received FCC certification--formerly called "type acceptance." In a September 19 letter to Extra licensee Sidney Lee Martin, KD4YBC, Hollingsworth reiterated an earlier FCC warning to Martin that he cease commercial marketing of non-certificated external RF amplifiers and amplifier kits capable of operating below 144 MHz.
In 1978, the FCC banned the manufacture and sale of any external RF amplifier or amplifier kit capable of operating below 144 MHz without a grant of certification from the FCC. The rules specifically prohibit manufacture and sale of amps that operate between 24 and 35 MHz as a means to stem the flow of illegal Citizens Band amplifiers.
The case arose from a February 11, 2000, warning to Martin from the FCC's Detroit office as a result of a classified ad Martin had run in QST. The ad featured the sale of external Amateur Radio RF amplifier kits for HF and 6 meters. The FCC letter admonished Martin that selling or offering such units for sale violated ?2.815 of the FCC's rules.
Martin--who operated a one-man business called RF Electronics in South Carolina--countered with his interpretation that he was allowed, under FCC Part 97 Amateur Service rules, to sell such kits as one amateur to another under an exception to the certification rules. Martin argued that ?97.315 of the Amateur Service rules permitted his licensed customers to purchase from him--as another licensee--and construct or modify one model of a non-certificated RF power amp or kit per calendar year for that licensee's personal use.
The FCC rejected that analysis, however. Hollingsworth emphasized that ?2.815(c) of the FCC's rules requires all external RF power amplifier kits that can operate below 144 MHz after assembly be FCC-certificated before they can be made, sold, leased, marketed, imported, shipped or distributed. He noted that other provisions of ?2.815 apply only to certain already fabricated amplifiers and do not exempt amplifier kits, particularly those capable of operating between 24 and 35 MHz after assembly.
Hollingsworth said ?97.315 also "specifically prohibits the use in the Amateur Service of an amplifier that the operator had constructed from a non-certified kit." He also noted that, in addition to kits, Martin's RF Electronics Web site had been selling non-certificated, assembled RF power amplifiers for use below 144 MHz. Hollingsworth said at least three of the assembled models were advertised as operational between 24 and 35 MHz.
Hollingsworth said FCC rules permit an individual amateur to construct or modify a non-certificated RF power amplifier once per calendar year for use at that amateur's own station--although the unit may not be built from a kit--and the amateur may then sell the amplifier to another licensee or

dealer. The rules do not provide for mass marketing or manufacturing and marketing kits or assembled amplifiers as part of a business, Hollingsworth said.
"Any and all marketing of external RF power amplifiers or amplifier kits capable of operation below 144 MHz must be in strict compliance with ?2.815 of the Commission's rules," Hollingsworth warned. He said the FCC would prosecute any violations and take enforcement action against Martin's amateur license.
Martin's Web site no longer offers any RF amplifiers for sale.

When we experience interference or "splatter" we tend to blame the other guy - after all the problem wasn't there until he started. But of course we have to realize that both the receiving as well as the transmitting side may be blamed and often both are. No transmitter is perfect. Besides the wanted signal it may put out unwanted signals like: spurious (discrete frequencies with or without modulation), sideband noise associated with and adjacent to the wanted signal and wideband noise.

The receiver on its side may suffer from overload from simply not being able to handle one or more of the signals, the selectivity may be insufficient to keep faraway >20 kHz stations out of the IF amplifier and the phase noise from the local oscillator may end up in the passband through reciprocal mixing.

Once upon a time there was a contest ....!
For many years the OZ9KY contestgroup has been participating in the VHF/UHF contesting. Having on of the most exposed - and best - QTH in this country, and running high power, big antenna systems and sensitive receivers/preamplifiers we have experienced our share of interference problems.
We have received reports from nearby staions complaining over our broad signals occupying much of the band - as well as being disturbed ourselves, when trying to receive weak signals in the presense of broad and noisy signals from others. Interference is definitely a two way street!

To improve the situation, we must understand the problems involved and we must be able to do some sort of measuring of signals and equipment. In this note I'll describe some of my observations along with measurement on a number of transmitters and receivers.

How to interpret interference.
When we experience interference or "splatter" we tend to blame the other guy - after all the problem wasn't there until he started. But of course we have to realize that both the receiving as well as the transmitting side may be blamed and often both are. No transmitter is perfect. Besides the wanted signal it may put out unwanted signals like: spurious (discret frequencies with or without modulation), sideband noise associated with and adjacent to the wanted signal and wideband noise.

The receiver on its side may suffer from overload from simply not being able to handle one or more of the signals, the selectivity may be insufficient to keep faraway >20 kHz stations out of the IF amplifier and the phase noise from the local oscillator may end up in the passband through reciprocal mixing.

A way of checking receiver performance - both blocking and selectivity - is by taking an x-tal oscillator with an output of 5 to 10 mV (-33dBm to -27 dBm), and using this as a signal generator with very low phase noise.

The simple way to check a receiver:
Connect the x-tal oscillator to the receiver and tune around the x-tal frequency. If your receiver can be tuned to within +- 10 kHz or closer from this signal without the S-meter responding or strange noises coming from the loudspeaker, you have very good single signal selectivity.
On the other hand, if the noise in your receiver starts increasing when you're still 50 - 100 kHz away, thats an indication of either too much phase noise from the LO or a poor selectivity in the IF. Only very few stations can pass this test!

315. Semi-CB related personal banter. Was: "Re: Disspelling Myths about Cb Myths."

Newsgroup: rec.radio.cb
Date: 2001-10-04 01:07:35 UTC

Source record: 99326

Aside from the fact that I'm General class now, studying for my Extra?
Not much.. Wrecked my Dynasty last week, and broke my left wrist
(frelling airbags!), which makes it hard to CW... but hey, that's life.
Aside from that, not a whole heck of alot is going on...

I've been hanging out on 20M PSK and SSTV alot lately, but 27.385 LSB
has been moving nicely, too. Local group out here is still as active as
ever, so that's a good thing.. Heck, I even got a couple of the guys to
start studying for their tech licenses for next november's VE session,
too, so that's a good thing.. These are good operators, mind you, not
the usual riffraff jammers/b.s. artists from channel 19. I wish I still
had that Cobra 2000 that I sold awhile back, but hey, the 148 I've been
using as a base for CB works just fine, too. I'm also trying to get a
10M net started for the locals, but that's going slowly.

'Sup with you?

The 68 is a good rugged chassis... Same as the Cobra 25 and the Uniden 66 for tune-up info, with some extra circuitry for the auto-squelch and the other additions the 68 had.. All in all, it's a good am-only set, IMHO.

>that.
>

And you do, Aaron? Have you e-mailed your concerns to Bob? Perhaps he'd let YOU write a piece for this website. I'm sure the "many others" out there that feel as outraged as you would respond.

>Your bumper sticker ought to read "I Bootleg & Break The Law & I Vote
>Too".

Hey, put forth the effort and have those bumper stickers produced. Again, I'm sure the "many others" out there would respond by requesting them for their vehicles. Hey, they might even do like some have done with Bert and send money to help him recoup his personal cash outlay and to help "the cause," UNSOLICITED! Oh, I forgot; that would require a valid return address thus eliminating the cloak of anonymity. (A troll's first line of defense.) Could try a P.O. Box, but they require a valid ID. You wouldn't happen to have a driver's license in the name of Aaron Voobner, would you?

Dick, if you're reading this; I wouldn't killfile this guy for the world. These posts take the edge off a tough day at work like I don't know what! You're the best, Aaron. ROTFL! Take care and 73.

Have you forgotten, Aaron? This isn't about "freebanding," illegal amplifiers, or using ham gear on CB, it's about the removal of the 250km limit on the citizen's band. However, I'm sure your artistic suggestion shall be duly noted and..."plonk!" Hey, what happened? Take care and 73.

That's nice. I bet you can add that little "Altoids tin" CW mod (external) to this rig as it's basically the detuned version of the same rig the mod was designed for, the Magnum 257. Take care and 73.

>68XL. Any comments on this rig?

Not a bad rig, but you can do better if you're in no rush. Go on ebay and look for a NOS Uniden, Cobra, GE, or Royce 40 channel AM rig. They're on there all the time, for a song and a dance. The SSB rigs command a slightly higher price. My advice to you is to buy a good sideband rig as the receiver section of these radios are superior by their inherent design. Even if you only do AM, you'll appreciate the better ACR. Take care and 73.

Hey Bert,
Yeah, me too, just a little in the evening and a
little in the morning. I stop that sig because I sold
one bike and bought a new one, so I' still
formulating a new sig. I don't like the Drifter,
but if you like retro styling bike it's kinda cool.
I just got a Honda VTX 1800 so it's like learning
to ride all over again, when you have only ridden
sportbikes all your life. I still have the Buell, I sold
my ever faithful Honda 1100 though (67,000 miles
never rebuilt).

Take care, hear you on the lower sides.....

Congrats on the upgrade! I hope you enjoy it better
than I, I'm sure you will. Sorry to hear about the accident,
I hope everything turns out ok. I decided to hook up a
small system in my truck, so I have a magnum 257,
Astatic 575m6 with a messenger 1200. I had an
antenna bar made up that drops into the stake holes,
so that way I don't have to drill into the cab for
antenna placement. Running a 185 amp alternator,
00 fine strand cable through a 180 amp breaker
with a dual 60 amp fuse box, dual batteries.
It runs a flat match, and rocks and rolls. I have the
radio dead keying approx 2.5 watts swinging to 10
so I'm not over driving the radio or amp.
I obviously have no desire to talk on the ham
bands, but maybe I'll catch you on lower side of

You are attempting to say interference is the same as splatter, it isn't. Splatter can cause interference, but interference can be cause by other things, such as front end overload on a perfectly clean (read non splattering) signal.

No Fear wrote:

> Go study the answers for the extra class.

Give it up. You are wrong and Steve is absolutely correct.

Front end overload is due to an off-frequency overly strong signal.
It is due to the front end of the receiver not being "tight" enough.
In other words, the selectivity is not sufficient to reject the off
frequency signal. Such selectivity (within certain limits) can be
obtained. The most recent trunked radio system I installed will reject
signals that are 12.5 kHz away from the desired frequency. The filters
that were required cost thousands of dollars for the system which has
5 receive frequencies.

Splatter causes interference over a wide frequency range, and does
not cause front end overload. It is usually due to an overmodulated
signal, or a signal amplified with a non-linear amplifier on AM or
SSB.

That does not mean that splatter and front end overload cannot occur
from the same signal. They can and often do.

3 or 4 million? Where do you get those numbers? Jay sez there are ten
million of those lemmings. Why do you say 3 to 4 million?

BTW, have you ever heard the phrase, "argumentum ad populum"? When used in this newsgroup it is usually accompanied by an 'ad verecundiam', and frequently followed by an 'ad baculum'. And I suspect that your response will be 'ignoratio elenchi', just as it is above.

Oh, and don't think that I am trying to make you sound stupid by using these terms, because there are FAR more than 3 to 4 million people that understand their meaning very clearly. And since you think that 3 to 4 million people doing something is a trend that should be followed, I'm sure that you understood this Latin just fine.

Really? Didn't you read the articles? I counted over a dozen illegal
mods (including one on how 26.000 to 29.999 just wasn't enough...!).
And there was at least one article on amps. What were you reading, Mark?

While I agree that an SSB radio would be a better choice, what's the
difference in "inherent design" that makes the AM receive on an SSB
radio so much better than that of an AM-only rig? I have never heard
that before, and I see little in any schematics I have that would
support that statement. Can you enlighten us, Mark?

That would be more trollwork from the ARRL and the FCC. Yep, that darn, pesky FCC, they just keep butting in and making a nuisance of themselves, eh Mark? You know, the US government should have better things to do than to restrict the freedoms of 3 or 4 million people, legal or not. And why should they care if you screw up the legal communications of those that have the right to operate without interference? Those FCC agents need to get a life, don't you think, Mark?

I just picked up a NOS General Electric 40 ch. AM rig for a friend
here at work. Only $19.99 and they were reputed to have that loud
audio that so many AMers like. I was never a big fan of Cybernet board
based rigs, but I have heard a General Electric SSB base that "caught
my attention." Good luck I hope you find something that'll make you
happy.

I've had about fourteen guys send me "a little something" for my time
and effort. (Which is really not all that much effort, BTW.) Two of
them sent $10.00 for two bumper stickers when all that was needed to
break even was $3.50, that was really appreciated. It does help me
recoup some of the costs and order more bumper stickers. The rest sent
around five bucks. The e-mail comments were/are nice too.

Hi again Landshark,

I'll admit to having an orange (Yeah, yeah, I know.) Yamaha 360 back in 1978 or 1979. My dad bought it after a a fellow NYPD officer let him take his mount for a spin. Mom squelched that whole deal after dad drove through the fence in our back yard. Beyond that, hogs, superbikes, and the like have never really been my bag.

There's a place around here that you'd love. Mark just moved there not too long ago, Port Jefferson. There's a Harley Davidson shop right by the ferry and the local bikers have taken over one of the public parking lots. On any given day you can see everything from scratchbuilts to fierce looking Harleys to the sleekest superbikes. I did see a Triumph superbike that looked nice and I'm still waiting to see the Hayabusa. Catch you later, take care.

Maybe it is time to expose the Boob behind the curtain. I might post this information here like I did for QRM2000 aka YRAC aka K5PF (Mr. Paul F. Folmsbee). I tried to give Paul a few hints that I knew that QRM2000 = YRAC = K5PF, but alas, he was too caught up in his game of deception to notice. I think Boobner is too.

Have you noticed that it has been quite QRM free in this group lately. LOL!

I`ve got to throw my 2 cents in.
Bert, there ain`t nothin to be ashamed about with that Orange bike. Hell, I still have the 1964 Honda scooter (50cc) bike that I learned to ride with when I was 6 years old. I still ride it a couple of times per year. I`ve had Rabbits, Lambrettas, Hondas, Yamahas, Kaws, Urals, Enfields, Triumphs, Nortons, Enfields, Ossa, Penton, Hodaka, H-D, Suzuki, Rokon, Bultaco.............. You get the idea. I have pictures of all of them and wish I still had all of them. I was delivering a brand new Enfield to a shop in Virginia last year and ran into 2 hard core biker H-D riders, at a restaurant, covered with tatoos and hair. You know the type. They couldn`t believe how good that Enfield looked. I told them it took me numerous years to find the parts and rebuild it. After they left I told another guy that was standing there that the bike was brand new and it just came from the factory. I`ll bet he is still there in that parking lot laughing his ass off.
Being a biker is a state of mind not a H-D. You can ride 2 miles or 500 miles a day and still love the experience. That is a true biker, not a yup with a big bank account. You can tell you`re a biker when you throw your leg over that scooter and ride off and all the bullshit seems to disappear.
Anyway, I like the sound of the place in Port Jefferson. Sounds like an interesting place. You can find me every Saturday morning at a place called Sue`s Sidecar Diner, in Pa.

Hi Jeff,
Hey I sold it, but it didn't go far! The owners son
bought it and promptly put it out on the show room
floor (display purposes only)
Yup, a little larger than coffee cans, but large
they are. I have wanted a cruiser for a while, since
renting a Fatboy on Maui, I said boy this would
be a nice ride for an extended cruise.
Now Harleys are grossly over priced and
way underpowered, so naturally the VTX seemed
like a great deal.

Don't worry, if they ever decide to sell it,
I have first right of refusal.

Did you know there is a linked 10m - 70cm machine near you in Ann Arbor?
Some of those soon to be new Techs maybe interested. I forget what the exact
frequency of each side is, but it should not be hard to find. Both machines
are under the same licensed callsign in the ARRL repeater directory.

Source record: 99479

The song was done by CW McCall who was actually a character in an ad campaign to sell Old Home bread from Sioux City in the Omaha area. CW, a truck driver, was hot for Mavis, a waitress at the Old Home Fillerup and Keep on Truckin' Cafe. A lot of the production for the album was done by Chip Davis of Mannheim Steamroller fame.

Should you find the album, by all means listen to Wolf Creek Pass -- the background is done by what appears to be a few ladies shanghaied from the JCCA.

CW the adwriter got hooked up with Midland CB and went on tour although he despised country music and took an hour or two to psych himself up for it before going on stage.

The last I heard of him (my sister went to school with him) he was mayoring in western Colorado.

The movie came out quite a bit later.

Punch CW McCall into Yahoo and the world will come to you.

Since they're just carries why don't you explain how you can demonstrate to
the group, convincingly, it was done by a Ham. I'll bet it was just another
CBer doing what CBers do, jamming other CBers.

WRONG! Straight to battery with fuse block right at same. Battery is,
itself, a
capacitor and by going to battery, you often get rid of noise, and current
drops
thru the wiring of the vehicle.

>Oh. A physician. Is she also a psychologist?

If you could read fool I told you she was a psychiatrist which is four more years of college above a psychologist. A psychiatrist is a medical doctor, a psychologist is not.

>And how does she explain
>intermarriage, which is getting steadily more common?

Yes fool she discusses these things in great detail, the why of it and how it fits the plan and what that plan is. Dr. Welsing leaves no questions left unanswered and it all makes perfect sense.

You can't read but perhaps you can listen and learn something. The interview with Dr. Welsing has been posted earlier today in alt.binaries.sounds.misc and alt.binaries.sounds.audiobooks

MINUTES OF BIG ILLEGAL FAGGOT KEYCLOWN MEETING

Meeting was called to order by acting chairwoman Sideband, known to the whore who grunted him out of her smelly assed moneymaker in some outhouse, as Christine Petadikk, of 6200 RICHARDS RD B1, BRIGHTON, MI 48116. This faggot boy is also known to Riley as the soon to be revoked licensee of amateur station KC8RKQ.
Regular chairman Trainpuppet the trained puppet was indisposed, as he had cornered the neighbor’s poodle and was finally getting some ass that would give his tiny little weener some friction.
Consensus among the gathered gayboys was that this was an entirely excuseable absence, as Trainedpuppet had spent 79 cents for a can of Alpo to smear on his pecker, and no one wanted to see good money go to waste.

The treasurer’s report was then read by illegal faggot assed keyclown twithed, also known as the Florida truckstop lurker.
Twithed scratched the seal of dried semen off her lips to report that the illegal faggot keyclown treasury was bankrupt as a result of buying 20 rolls of duct tape and 50 hamsters for the last meeting’s entertainment.
Prison bitch, stretched anus, jizz loving faggot Landcarp moved to accept the treasurer’s report as read.
Motion was carried by a wimpily feminine voice vote.

GayScottiekins, also known as “Unit69, who69's dude’s units”
then suggested a motion to form a committee to study the security measures of pet stores, to determine the feasibility of shoplifting or midnight burglary to obtain more hamsters.
Motion was seconded by that sperm slurping hunk of wormy dogshit known as Tim Nebout, who works as the janitor at the gloryhole equipped porno store located at 711 Marlin, in Bayou Vista, TX 77563.
Motion was carried by faggily girlish voice vote.

Sperm encrusted gay lot lizard Mr.Knownotshit/Phoneyboy, joined the meeting by telephone from her work cubicle in the gay section of the Lucent office building at this time. Getting off her knees, where she was blowing her supervisor to avoid layoff, she coquettishly suggested the purchase of funeral flowers for DaveMaid, X-Fuck, NoBalls, and all the other makers of illegal faggot keyclown equipment. As there were no funds to purchase these flowers she volunteered to work the truckstops around the NJ/NYC area for the next 2 weekends to raise the money.

Fellow faggot LS454SS tearfully seconded this motion and volunteered to work with Mr.Knownotshit/Phoneyboy, saying “I need some new cock anyway, Maryland state troopers are crackin down on the truckstops here!” Mr.Knownotshit/Phoneyboy accepted this “cumming together” , and gave LS454SS a consoling, faggy, openmouthed, spit swappin, lotsa tongue, kiss.

Head hopping fagboy Randy Chapman, of 1100 12th St N, Texas City, TX, 77590, known to Riley as the holder of soon to be revoked no code technician license KB5URP, and who gutlessly hid behind the name “MudDuck”, <oops, “MadDog”> stopped necking with that cuntal orifice faced sperm whore known as Jeffie Mayner long enough to say that he needed to give some head, and would sell his services as a 50/50 raffle to raise some money for the relief efforts for the disaster caused by Riley.
His neighboring texas twat Shanefag led a standing ovation for his heroic efforts.

Dickhead McCrotchrot, N0BK, then swished into the room with a box of hamsters and duct tape, as a donation to the relief efforts. Dickhead said “I have made so much money off illegal faggot keyclowns over the years that I’d feel terrible if I couldn’t help you poor federal criminals.”
All the keyclowns in attendance erupted in joy and promptly started picking out hamsters to have sex with.
Mr.Pain in his coochie, the registered moron, even then stripping out of his pink nightie for some hamster action, motioned for adjournment.
Motion seconded by Hunter_in_MI, the swishy ass queerbait.
Motion carried by sex crazed voice vote and meeting adjourned.

MINUTES OF BIG ILLEGAL FAGGOT KEYCLOWN MEETING

Meeting was called to order by acting chairwoman Sideband, known to the whore who grunted him out of her smelly assed moneymaker in some outhouse, as Christine Petadikk, of 6200 RICHARDS RD B1, BRIGHTON, MI 48116. This faggot boy is also known to Riley as the soon to be revoked licensee of amateur station KC8RKQ.
Regular chairman Trainpuppet the trained puppet was indisposed, as he had cornered the neighbor’s poodle and was finally getting some ass that would give his tiny little weener some friction.
Consensus among the gathered gayboys was that this was an entirely excuseable absence, as Trainedpuppet had spent 79 cents for a can of Alpo to smear on his pecker, and no one wanted to see good money go to waste.

The treasurer’s report was then read by illegal faggot assed keyclown twithed, also known as the Florida truckstop lurker.
Twithed scratched the seal of dried semen off her lips to report that the illegal faggot keyclown treasury was bankrupt as a result of buying 20 rolls of duct tape and 50 hamsters for the last meeting’s entertainment.
Prison bitch, stretched anus, jizz loving faggot Landcarp moved to accept the treasurer’s report as read.
Motion was carried by a wimpily feminine voice vote.

GayScottiekins, also known as “Unit69, who69's dude’s units”
then suggested a motion to form a committee to study the security measures of pet stores, to determine the feasibility of shoplifting or midnight burglary to obtain more hamsters.
Motion was seconded by that sperm slurping hunk of wormy dogshit known as Tim Nebout, who works as the janitor at the gloryhole equipped porno store located at 711 Marlin, in Bayou Vista, TX 77563.
Motion was carried by faggily girlish voice vote.

Sperm encrusted gay lot lizard Mr.Knownotshit/Phoneyboy, joined the meeting by telephone from her work cubicle in the gay section of the Lucent office building at this time. Getting off her knees, where she was blowing her supervisor to avoid layoff, she coquettishly suggested the purchase of funeral flowers for DaveMaid, X-Fuck, NoBalls, and all the other makers of illegal faggot keyclown equipment. As there were no funds to purchase these flowers she volunteered to work the truckstops around the NJ/NYC area for the next 2 weekends to raise the money.

Fellow faggot LS454SS tearfully seconded this motion and volunteered to work with Mr.Knownotshit/Phoneyboy, saying “I need some new cock anyway, Maryland state troopers are crackin down on the truckstops here!” Mr.Knownotshit/Phoneyboy accepted this “cumming together” , and gave LS454SS a consoling, faggy, openmouthed, spit swappin, lotsa tongue, kiss.

Head hopping fagboy Randy Chapman, of 1100 12th St N, Texas City, TX, 77590, known to Riley as the holder of soon to be revoked no code technician license KB5URP, and who gutlessly hid behind the name “MudDuck”, <oops, “MadDog”> stopped necking with that cuntal orifice faced sperm whore known as Jeffie Mayner long enough to say that he needed to give some head, and would sell his services as a 50/50 raffle to raise some money for the relief efforts for the disaster caused by Riley.
His neighboring texas twat Shanefag led a standing ovation for his heroic efforts.

Dickhead McCrotchrot, N0BK, then swished into the room with a box of hamsters and duct tape, as a donation to the relief efforts. Dickhead said “I have made so much money off illegal faggot keyclowns over the years that I’d feel terrible if I couldn’t help you poor federal criminals.”
All the keyclowns in attendance erupted in joy and promptly started picking out hamsters to have sex with.
Mr.Pain in his coochie, the registered moron, even then stripping out of his pink nightie for some hamster action, motioned for adjournment.
Motion seconded by Hunter_in_MI, the swishy ass queerbait.
Motion carried by sex crazed voice vote and meeting adjourned.

391. ILLEGAL FAGGOT KEYCLOWNS SUCK DOGGIE DICK!!! READ THIS YOU FAGGOTS!!!

Fellow faggot LS454SS tearfully seconded this motion and volunteered to work with Mr.Knownotshit/Phoneyboy, saying “I need some new cock anyway, Maryland state troopers are crackin down on the truckstops here!” Mr.Knownotshit/Phoneyboy accepted this “cumming together” , and gave LS454SS a consoling, faggy, openmouthed, spit swappin, lotsa tongue, kiss.

Head hopping fagboy Randy Chapman, of 1100 12th St N, Texas City, TX, 77590, known to Riley as the holder of soon to be revoked no code technician license KB5URP, and who gutlessly hid behind the name “MudDuck”, <oops, “MadDog”> stopped necking with that cuntal orifice faced sperm whore known as Jeffie Mayner long enough to say that he needed to give some head, and would sell his services as a 50/50 raffle to raise some money for the relief efforts for the disaster caused by Riley.
His neighboring texas twat Shanefag led a standing ovation for his heroic efforts.

Dickhead McCrotchrot, N0BK, then swished into the room with a box of hamsters and duct tape, as a donation to the relief efforts. Dickhead said “I have made so much money off illegal faggot keyclowns over the years that I’d feel terrible if I couldn’t help you poor federal criminals.”
All the keyclowns in attendance erupted in joy and promptly started picking out hamsters to have sex with.
Mr.Pain in his coochie, the registered moron, even then stripping out of his pink nightie for some hamster action, motioned for adjournment.
Motion seconded by Hunter_in_MI, the swishy ass queerbait.
Motion carried by sex crazed voice vote and meeting adjourned.

Respectfully Submitted

Good deal Chris!
Hey Sparky.....It is NOT what you would call a public forum and seeing how he is the guy that runs the server it is on he can do as he sees fit. Think "benevolent dictatorship".

I don't have the radio yet. It will be here sometime next week. I'd like to
have the mike wired for it before it arrives.

Thanks for the info. I am waiting for the radio to arrive. I thought it was 4 pin, but it could be 5... guess I'll have to wait until it gets here before I wire up the D-104 for it.

The legal limit is 4 watts. Why would anyone on CB need a meter that
reads up to 25K watts?

So how does that work? Shane Youhouse (or whoever he is) supresses all
discussion of CB rules? Hm. I thought the whole principle of "big
radios" was based on the idea of free speech. He even has a free
speech ribbon icon on his page. What gives?

Hi Dick...

Here's the best bit...

The book was probably virtually unknown until the death threats were made against the author.

Those who whined and complained about the book, propelled it into the best sellers list. They made everyone want to find out what it was all about, and so helped the spread of a book they didn't want people to see (and made the author a nice sum of money).

Often the "fanatics" are their own worst enemy.

Regards,

Brainbuster.

I must admit that I assume all people on here are genuine, unless they show otherwise. This "Sparky" has certainly shown his true character. He even complained that I didn't give him grief about his "pro-legal" position, which shows that he only argues the point to start flame wars, and that I have no problem with the law.

He claims to care about the law, yet he finds murder acceptable. They claim to only bother the "illegal" CBers, but I have a legal CB setup - type approved CB with no extra frequencies, legal antenna, and NO external amps (rx or tx)... but look at the profanities hurled at me.

As I made it clear that he is now in my killfile, it is obvious that he cannot read. It is also clear that he must like what the people he calls "keyclowns" have to say, because he still reads their posts.
I notice from the part you included, that he is in denial. Maybe he should go back and read his own posts.

Regards,

Brainbuster.

Hi No Fear.
My Troll meter isn't moving much, the small amount of movement could be splatter or cross mod due to the large signals of the Trolls that I have blocked.

So, assuming that my Troll meter is working correctly here's my reply to your post...

No Fear <nofear@home.comm> wrote in message news:ya7u7.66180$5A3.24597047@news1.rdc2.pa.home.com...
>
> As a Citizens Band Radio Operator, I recognize my obligations:
>
>
> To the Federal Communications Commission and the United States of America,
---

I don't know what your obligations are, but in the UK we have very few.
We are obliged to allow inspection of our CB equipment at any reasonable time.
I once had a visit from the local RIS chap (he was visiting all radio operators in the area), and I did let the chap inspect my radio equipment.
But then all my equipment was legal, so he wasn't going to take any of it.

So I guess that you could say that I fulfill my "obligations" as a UK CBer.

> who believe that I am sufficiently mature to be entrusted with the
> ownership, control, and operation of a radio transmitter.

I didn't think the FCC controlled who uses CB, so how do they allow only people they consider "mature" to access CB?
Do they have a minimum age rule in the US?

> To my neighbors, who trust their lives and safety to my skill and judgment
> during times of emergency.

I don't really agree with this. Being a CBer does not qualify you to deal with an emergency.
Skill and judgement are not a requirement to use a CB.

> To my fellow Citizens Band operators, who depend upon me to follow
> established laws, good practices, procedures and courtesies.

I agree that CBers should show respect for their fellow operators.
Front end overload (signal beyond receiver dynamic range) is often
unavoidable with very close CBers, but when a CBer tells you you are knocking
out channels a mile or more away, you really should try to
find out what the problem is.

> I will never knowingly cause interruption to Citizens Band stations engaged
> in communications.

This again is a matter of courtesy and respect for other CBers. Mic keyers
and music players are also a problem in this country.

> I will be careful to avoid generating interference to radio and TV
> receiving equipment, and will endeavor to locate and eliminate interference
> to any such equipment which may emanate from my station.

I agree to a point. As most CBers are non-technical (although we seem to get
more techs on this ng), then it would often be a case of getting help with
finding a problem.
But there are cases where inteference is not the fault of the CBer, but
poorly designed TV, radio, or audio equipment. Inteference to equipment that
is not a receiver cannot be caused by a "dirty" transmitter, and so does NOT
point to a problem with the transmitter. Good antenna position and tuning
can help to minimise the chances of these problems occurring.

The message that "illegal CB inteferes" can be misleading, it suggests that
legal CB does not... when it often does. A low antenna position or high SWR
are not illegal, but either can lead to TVI or RFI problems. On the other
hand, speaking to someone 156 miles away does not cause inteference... AM and
SSB are illegal in the UK, but many countries have proved that these can be
used without inteference.

This "legal issue" leads to the "it's not my fault" attitude, where CBers are
unwilling to consider any attempt to cure EMC problems because their
equipment is legal, and so they believe this means that it cannot be their
fault.

> I will transmit only to pass necessary and substantive messages.

The channels would go dead!!
In the UK, we once had a rather interesting rule... "no transmissions of a
frivolous nature". This was removed when many other crazy rules (such as
antenna height) were changed.

> I will make all efforts to make full and proper use of Channel 9, the
> National Calling and Emergency Channel.

Personally, I stay clear of channel 9. But so many people have mobile phones now, that CB is not often used to call for an emergency now.
How many people monitor channel 9, and (apart from abuse) is it a reliable method of calling for help. I know it is not that reliable in the UK.

> I will aggressively maintain my proficiency as a Citizens Band operator and
> keep abreast of electronics and communication developments so that my
> operation, which largely depends on such knowledge, may be of the highest
> order.

I must disagree.
Personally, I have an interest in electronics (as you will have guessed). But this is a separate interest to CB, it just happens to overlap in places.

CB is a service for the non-technical. This is why the equipment has to be type approved, the users are not expected to understand how the equipment works.
If you are in CB purely for the technical aspect, then you are in the wrong hobby. If someone wants a technical hobby, and to experiment with equipment, then Amateur (or professional) radio is the way to go.

> advance the dignity of the Citizens Band Radio Service.

I would like to see CB being taken a bit more serious than it is.

But we must consider who made CB so popular in other countries, and created the image that non-CBers have of CBers...
A trucker who: broke speed limits, slept with every woman he could get his hands on, beat up police officers, run from the law, used his vehicle to smash down a jail, smashed though road blocks, and faked his own death.
And he did all this while carrying a truck load of explosive chemicals.

And that guy was seen as a hero!!

Regards,

Brainbuster.

At the nursing home.

Once upon a time there was an elderly gentleman who was suffering
from Alzheimer's. His wife of 40 years loved him very much, but she
couldn't handle him any longer. He would wander about never knowing
where he was or sometimes even who he was. She took him to a nursing home.

At the nursing home, while the wife was filling out paperwork, a nurse
had the gentleman sit in a chair. Suddenly the man starting slowly leaning
to his left. The nurse ran over and put a pillow on his left side to prop him
up.

A few minutes later, he started leaning to his right.
Again, the nurse ran over and put a pillow on his right side.

Then he starting leaning forward.
This time, the nurse strapped him into the chair.

About this time, his wife, having completed the paperwork,
walked up to him and asked, "How do you like the place?"

"It's okay, I guess" he said. "But, they won't let me fart!"

Leland C. Scott <Twistedhed-abuse@cotse.com> wrote in message
news:jhuu7.7333$Gd6.143279@typhoon.mw.mediaone.net...
^
^ And people want to know why others get so discussed with CB Radio and
^ turn in to Ham Radio Operators.

Probably for the technical side, and to be able to experiment. There are
also those who give up their Amateur licence and just use CB.
There is a "Ham" in the UK who posted the same technical question in a CB
group, and a Ham group. He says that the only help he got was from the CBers,
his fellow Amateurs gave him nothing but grief. So he says he is considering
giving up the Amateur licence.
Two different hobbies, with different purposes, and one cannot replace the
other.

---
^ It's a real pity there are too many like your example operator
^ out there, and even more weird why nobody cares about trying to
^ get rid of problem operators like that.

You cannot get rid of these people, as the more you give them grief, the more
trouble they will cause. Another problem is that as one "idiot" decides to
leave CB (or grows up) you get another new one to replace them.

This chap was not actually breaking any laws, and could easily claim that he
was just tuning his antenna on a clear channel. I knew what he was doing,
but it was not illegal... just anti-social.
You can either spend your life trying to clean up CB, and find that each
"wally" that goes is simply replaced with another, you can give up and
let the "wallies" take your hobby away from you, or you can learn to
recognise their tricks and work around them.
Of course, if they actually break the law, then there is another option.

---
^ Anyway more to the point the above example can happen just as easy with
^ consumer electronics as well. I really get a chuckle when I hear advice on
^ the group from one illegal operator to another saying more or less the
^ following "If you run a clean signal nobody will notice you or care, just
^ use a filter on the output of the....". No so. I ran across an interesting
^ statement, I don't have it booked marked, where the FCC claimed they would
^ not expand the official number of CB channels beyond the current 40 because
^ the spread in frequency from a low numbered channel to a high numbered
^ channel could easily end up being 450/455 KHz. The current Max spread is
^ already 440 KHz, which is pushing it even now. That frequency, 450/455 KHz,

^ is a VERY common IF frequency in many radios for the general consumer
^ market place. Two CB stations, running legally, could swamp a broadcast
^ radio's electronics if close enough such that the two stations could be
^ heard on the non CB Radio receiver. In no case is the production of ANY
^ spurious signal required by either station for this to happen, thus any
^ filtering etc. would be totally ineffective in curing the problem. Since at
^ the time the request was made, to expand from the old 23 to the current 40
^ channels, CB Radio was so popular due to the release of a number of movies
^ and music back then, the FCC felt the likely hood of the above to occur was
^ too great to risk it.

The 455KHz problem could happen with any two transmitters that are 455KHz apart, and close together. British CB has two bands, and there are about 26 combinations that would create 456.25KHz. There are also CB and Amateur combinations that could create a 455KHz signal.
It is also possible for two Amateur stations to cause the same problem, the broadcast receiver would not know if the operators were CBers or Hams.

It would require that the signals are strong enough to cause front end overload, and so create the difference within the front end of a receiver. Most british radio equipment that uses 455KHz, and is dual conversion, so 455KHz is rejected in the first IF filter. The AM MW system is now considered outdated in the UK, and the RIS will not investigate inteference to this service. Most people listen to the the VHF FM stations, and MW receivers do not see that much use here anymore.

In the end, this is a receiver design problem, but care with the antenna position etc. can minimise the chances of this happening.

Your example does prove another point... the idea that "illegal CB inteferes" can mislead people into believing that legal CB does not. These examples are of how totally legal stations could intefere with other radio equipment. But as you say, the transmitters are not putting out *anything* that they shouldn't, and so they are not to blame... the receiver design could do with improving, but the cost is a more important design consideration.

Even receivers can cause problems, I have known TVs to totally wipe out MW reception for a few houses. The TV sound IF (6MHz in the UK) could sometimes be picked up on a receiver placed close enough to a TV.
As an idea of the electromagnetic field given off by a TV, you could hold a mains tester screwdriver (uk mains = 240v ac) by the blade, near the back of some british TVs, and the neon will light up in your hand (with no connection).
I believe that receiver standards are being tightened up to reduce all this unwanted radiation from receivers.

There were some old Uniden CBs that had a poor image rejection, due to the lack of a first IF filter (AM mode). These were prone to picking up a signal at twice the IF (910 KHz) above the frequency you were on.

Regards.

Brainbuster.

He DOES know how to read dipshit, read your above sentence. A
psychiatrist is a scam artist. To put them in the same league as medical
doctors is a slap in the face of medical doctors everywhere. Learn the
difference.

Gee, thanks for the warm invite.

It sure sounds like racial hucksterism to me.

I live in DC and did look her up in the phone book, and there is someone of this name listed as a physician, but I'll tell ya, I read the papers and stuff and I've never heard of her, never seen her asked to guest on panels. And you didn't answer my question about why you think Beatles fans and Trekkies want to hear from you.

BTW, when we use the word "Fool" around here, it's usually followed by "on the Hill".

>Oh. A physician. Is she also a psychologist?

If you could read fool I told you she was a psychiatrist which is four more years of
college above a psychologist. A psychiatrist is a medical doctor, a psychologist is not.

>And how does she explain
>intermarriage, which is getting steadily more common?

Yes fool she discusses these things in great detail, the why of it and how it fits the
plan and what that plan is. Dr. Welsing leaves no questions left unanswered and it all
makes perfect sense.

You can't read but perhaps you can listen and learn something. The interview with Dr.
Welsing has been posted earlier today in alt.binaries.sounds.misc and alt.binaries.sounds.audiobooks

Hi Frank,

I don't think Mark was referring to the RCI-2950DX review, despite the subject line of this thread. If you read it again, I'm sure you'll see that he was replying to Aarons comments re. the RM-9807 and the "I Work 11-Meter DX... & I VOTE!" bumper stickers. It has nothing to do with linears or out-of-band operations.

Hi again Frank,

Perhaps I can offer some assistance. I'm not entirely sure but isn't there the presence of an IF stage (455KHz?) combined with a crystal lattice filter in the better SSB rigs that's just not present in the AM only rigs? I've personally never heard a AM rig that had better or quieter "ears" than good SSB rig. Whatcha think?

I don't know the specifics of rigs since about 1975 but you hit it. The transceiver came to pass in the 60s because a number of parts were in common in transmit and receive. These parts were a bit expensive, the filters be they crystal or mechanical ala Collins, the frequency determining mechanism (neat way to say VFO) so there was a real advantage in buying one rather than two. In the process some other parts, like the i.f. amp you mention, were also common to both functions. There is no good reason not to use the balanced mixer (modulator) as the receive front end which is a definite help. The transmitting components used in the receive side are generally far better than the usual receive only parts.

Plus the passband is narrower or can be which will knock down the noise a lot.

Incidentally, the trend in modern equipment is to up-convert to 45.75 MHz (standard TV video i.f. to completely eliminate image responses. Filters are built for the frequency so SSB is generated there. Kinda cute.

I would suspect that another reason is that the engineer is not building to the low price points of Ancient Modulation rigs.

Dick N&#65533;BK

443. Re: Shunt-fed antennas

Newsgroup: rec.radio.cb

Message-ID: <cr8v7.104605$5A3.28453356@news1.rdc2.pa.home.com>
Source record: 99505

Interference is usually taken to mean any unwanted signal (or noise) that, by adding to the desired signal, degrades reception of the wanted information.

There are (at least) two ways in which a transmission can make its presence be heard on frequencies at which it is not intended to be heard - ie., it is interfering with other traffic.

There is a perfectly good, legitimate, well-controlled and strong transmitted signal. But the receiver is not tuned to it. The receiver is tuned to another frequency. The receiver front-end selectivity is not good enough and the strong unwanted signal is present at the first receiver stage. The receiver gain is very high because it is tuned to a nearby signal, And so the strong but unwanted signal is amplified and overloads the receiver at some stage. It may even overload the first stage.

When a nice sinewave signal is overloaded it is converted into a squarewave and its nice rounded sinewave has its ends chopped off. A squarewave has frequencies which are not present in the original sinewave. And so the originally good strong signal can be heard on the frequency of the weak unwanted signal. It is heard as noise and splatter. But the fault lies in the receiver.

Remember that a huge number of signals are presented to the front end of the receiver, and the task of any radio is to pick out the wanted signal and reject the rest.
But, no transmitter puts out a pure signal, so in addition to the main signal, there will be harmonics and spurs. These impurities really can interfere with other signals. There is no way to completely eliminate spurs and harmonics; they are a fact of life in radio-frequency circuits.

444. NY/NJ/PA "Radio" Octoberfest this Saturday

Newsgroup: rec.radio.cb
Date: 2001-10-05 01:56:26 UTC
From: k3bu@aol.com
Message-ID: <20011004215626.08376.00001077@mb-ch.aol.com>
Source record: 99506

Reminder.
NY/NJ/PA "Radio" Octoberfest this Saturday

You are all invited to (Radio) Octoberfest at Verkhovyna Mountainview Resort in Glen Spey, NY (NY,NJ,PA tri-state area) hosted by the Tesla Radioclub and Ukrainian-American Cultural Foundation - UACF on October 6, 2001, starting at noon till ???

Come and have fun meeting other hams, DXers, contesters, while having good time and drinking Octoberfest beer. Enjoy Ukrainian and German food, listen or dance to endless polka's. Wear your badge, hat or shirt with callsign proud and meet other radio aficionados around the "radio" table.

140 acre Verkhovyna resort is the new home to Tesla Radioclub N2EE station. Join the semi-serious discussion of how many towers do we need to put up there. Come, join the club and get a free beer.

Directions:
Take Hwy. 84 to Port Jervis, NY exit 1; follow Rt. 6 through Port Jervis to traffic light with Rt. 97/42 signs, go through and follow Rt. 97 west for 10.8 miles to Pond Eddy (motel on right, bridge on left), turn right onto High Rd. (Rt. 41), go up the steep hill for 1.7 miles, Verkhovyna is on the left. Plenty of parking.
Maps and sattellite view of the resort are at www.UACF.net home page under directions.

See you all there and join us yodeling in Morse code :-)
Nazdorovya, Ein Prosit!

Yuri, K3BU
pres. Tesla Radioclub

1 - She seems to think that the white ethnic group is the only one
that has racist views, remarks...when it is actually a part of human
nature. Maybe she should move her research to removing those traits
from the human race.

2 - Even if she did find a way do you think anyone would have their
children geneticall manipulated for this reason, when proper
education, and social atmosphere will correct the problem?

3 - Still make perfect sense?

Well Mr Hoovberjerys, why don't you fuck off the NG and go somewhere else. Frankly, I love pumpen 1Kw from my Yaesu FT1000 on 27Mhz. This guarantees that I get heard in all the right places, oh, did I mention that I do this through a 4 Element quad? Work out the sums for yourself, but I can tell you that it is definitely not 1000 watts coming out the end of that stick!!!!

Oh, the FCC doesn't concern me, I am in Australia...so GET FUCKED and get off my favourite NG. I wanna chat with my Power Hungry (God Loveem) American buddies!

Now FUCK OFF!

Think of this senereo: IF Greyhound didn't disallow CB's in their busses like they do now, and IF the driver that got his throat cut between Nashville & Chattanooga on I-24 had a CB and a BIG UGLY MIC bought from his favorite local Independant CB shop, would he of hit the Croation with the BIG UGLY MIC, thus preventing his throat from being cut and the bus crashing, killing the Croation and a few other people? SO I SAY that IT IS Greyhound's fault for not allowing CB's in their busses that their drivers use to use (remember that Greyhound driver that had a portable CB that alerted SMOKEY that there was a problem or a hi-jacking a few years ago, and the bear got the criminal out of the bus and the driver LOST HIS JOB because he had the CB in it against the COMMIE COMPANY'S policy)? (remember--in a communist country there is only 1 bus company--sorry Trailways)! What do you think of this!
Dave!!!!!!!!!!!!!!!!!!

Sorry Bill my disagreement was with SSB not Steve.

> Front end overload is due to an off-frequency overly strong signal.
> It is due to the front end of the receiver not being "tight" enough.

I agree with this Bill. But, it is also still considered Bleedover. Adjacent channel signal close in frequency with significant power can cause desensing of receiver, pulling of AFC, even capture.

> In other words, the selectivity is not sufficient to reject the off
> frequency signal. Such selectivity (within certain limits) can be

Of course, through better filtering. http://www.cbcintl.com/cgfilter.htm

> Splatter causes interference over a wide frequency range, and does
> not cause front end overload. It is usually due to an overmodulated
> signal, or a signal amplified with a non-linear amplifier on AM or

> That does not mean that splatter and front end overload cannot occur
> from the same signal. They can and often do.

Splatter is another form of interference. When you try to tune in a station and you hear some hissing and harsh sputtery noises from another station on a near-by frequency, that's splatter. Splatter hsa a variety of causes including excessively high level of audio (over-modulation) Splatter is also more of a problem close to the transmitter, where that rig's signal is much stronger than the one being splattered on. It's true that overly broad tuning circuits and IF filters make splatter worse. However, it's also true that both AM and FM transmissions generate sidebands that occupy a lot of bandwidth.

Bert, many illegal activities are the result of natural occuring phenomenoms, this does not make "them" any less illegal.

I don't see many if any at all using only 12 watts on SSB, Oh I am sure there are a handful out there but remember you said there are millions of Cbers, so whats a handful? It is wishful thinking on your part though.maybe if the rest of 11 meters cleaned up there act perhaps they would "Reward" 11 meters. The ssb bunch of guys with souped up export radios, power mikes, clipped, peaked and tweaked. Hitting close to 50 watts with the radio alone. And of course no one uses a amplifier on SSB Bright?

The CB cutting at 40 channels rather than the scheduled 99 was actually the second time that consideration influenced FCC decision making. The consensus at the time was that it was BS; CB has been done, from all outward appearances, by some summer interns at the Commission.

The receiver standards for radiation have been fairly tight in the US for many years although they do not approach the current Brussels theories. TV sets have not interfered with each other in years.

In the old days, the video i.f. was 25.75 (now 45.75) so that when the standards came out for TV Channel 1 was 44-50 (yes the ham band sat between 1 and 2) with the pix at 45.25. This put the local oscillator at 71 MHz which was on top of the Channel 4 sound carrier at 71.75. As a result there is no Channel 1 in the US. There has always been some feeling that David Sarnoff (RCA) really wanted to drive a stake thru FM which prewar was 44-56 MHz and, he thought, represented a threat to his color system. Current sets would have their LO running in the FM band on Channels 2 and 3 but I have never seen an interference case. Older FM radios could disturb air freqs and caused something of a stir but this is a thing of the past as well.

Some TV sets came right off the power line thru a half wave rectifier and derived all operating voltages from the scan. This made them open to any rf riding the line. It also made them vulnerable to line surges (ever seen a Trashiba with 64 pins welded together internally??) so the current style is a cross-wound choke in the line, AC is pretty well unaffected but any common surge is bucked out; does the job for r.f. as well. Since coaxial feeds are fairly universal getting trash on the 18 inches or so of lamp cord between the back of the set and the tuner has also slowly disappeared. The choice of core material in the tuner input coils acts as a pretty decent hi-pass filter so the classic overload situation is not what it used to be. I have found the power line is a more common coupling method than the antenna.

AM (remember we have no long-wave) is alive although it tends to be talk, news, sports, etc. I remember the WARC in the 70s where our FCC wanted to go to 1800 with AM (and got 1700 when the Russians pointed out all the Land Mobile they have in this range) and the rest of the world looked at us as if we had grown another head. Here again, BCI is not a great problem but audio rectification is. The nice thing about sideband is that the inteferee doesn't understand you.

I seem to remember hearing this stuff from all the neo-nazi geeks who try to post in the heavy metal groups. Reverse the racial identities and it sounds just like the crap they post. How would you like to hear someone ranting about how black people can't help but be racist? Inflammatory rubbish like this is the reason no one can get along with their neighbors. 1% of the population stirs up everybody else with thinly veiled lies and then profits from it. Most people just want to live their lives peacefully.

Ivy league hot house flowers like the good doctor make their living by convincing people that there are racists under every rock and behind every

tree. I wonder how often she leaves her little world to observe the people around her? Most of the people my age that I know have no problem talking to people of all nationalities. Society is more open than ever before and many people don't care what race someone is or what their religion is.

I don't know why anyone takes this seriously, people laugh when nuts start screaming about flying saucers, the Bilderbergs, the Tri-lateral commission and the Jewish conspiracy, this is more of the same insanity.

> I notice from the part you included, that he is in denial. Maybe he should go
> back and read his own posts.

Maybe YOU should go back and read my posts, and find where I say that
murder is acceptable. I didn't -- those are YOUR words, not mine. The
only one that can't read is YOU, since you have ignored everything I
have said except to respond with the same kind of logical comprehension
as the typical keyklown, hence the association. And maybe you should
go back and read YOUR OWN posts too, since you said you put me in your
killfile twice before this.

You are digging your own hole, brainfart. This has nothing to do with
illegal operation, it has to do with your limited mental capacity. But
you can prove me wrong by simply showing where all this began. You do
remember, don't you? I said that I have respect for any soldier or any
person that is willing to fight and die for his beliefs, but I have no
respect for criminals that would mock the rights and freedoms that
millions of Americans have fought and died to defend. You said that I

was a seriously sick person, but only because you thought Voobner wrote my words. So prove me wrong, brainfart. Prove me wrong on any part of what I just said. You can't, and that's why you keep coming up with all these bullshit excuses, and claim to have killfiled me twice before. I know you won't killfile me, at least not for very long, because I am going to hound you until you admit your stupidity.

So what is this other info you claim to have about me? Or was that just more bullshit? With all your lame excuses, it's YOU that has showed YOUR true colors. You hopped on the anti-Voobner bandwagon and got caught. Now you can't jump off because that would alienate you from the keyclowns, so now you join them in their tactics. If there is one thing that defines a keyclown, it is the total lack of integrity. You are running out of that real fast. If you have any left, go ahead and post this 'info' about me that you claim to have. Oh, and make sure you get the right Frank Gilliland, because you wouldn't want to be at the top rung of another fiasco like the one twistie and others did with N7VCF's phone number, would you? Naw, I don't think you want a harassment suit filed against you just because you pulled a grand mal boner on a newsgroup, would you? So go ahead, brainfart, give it your best shot!

> Whatcha think?

Well, just about any CB receiver circuit today is a double-conversion
superhet with 455kHz as one of the IF freqs, whether it's AM-only or SSB.
Some radios switch out the sideband filters for AM, while others treat
an AM signal as SSB. So there is nothing 'inherently better' about the
design of AM reception in an SSB rig over an AM-only rig, it depends on
the choices made by the engineer.

Good point. I think it's better to attempt to change the rule using the correct protocol rather than ingnore it and continue to break it.

>I don't see many if any at all using only 12 watts on SSB, Oh I am sure
>there are a handful out there but remember you said there are millions of

Well, if you believe that what you've described above represents the majority of CBers, perhaps you could lobby the FCC for better enforcement.

>And of course no one uses a amplifier on SSB Bright?

Of course they do. I've just haven't run accross "Kilowatt Charlie" as much as some on the NG would have you think. I'm not in the mood to argue and I generally don't like to insult anybody so I'll assume that you meant "right?" at the end of your sentence.

> such a good thing.

Hi JJ...

The Bible does promote peace, and love for all people...
" You have heard that it was said, 'Love your neighbour and hate your enemy.'
But I tell you: Love your enemies and pray for those who persecute you "
Matthew 5v43 (New International Version)

The problem is that some people use God as an excuse for their personal anger or hatred. They believe that the words "I did it for God" will excuse them.
If someone should die for their sin, then God himself can, and will do the job (see Acts 5v1 to v10).

Religion isn't the only area where you get fakes... and some don't even realise they are fakes.
It's not much different from someone using the law as an excuse to make offensive and profane comments, false accusations, and to create anger. If they truly believe in the law, then why are they not letting the law deal with it?
Many trades have fakes who are not qualified to do the work, but will still take your money.

It just means that you have to look a bit harder to find the good side of things.

Regards,

Brainbuster.

But there is one more thing they achieve...
They help to promote the things which they say they don't like by drawing
more attention to them.
Controversy can be a great tool for selling products, some big companies
actually use this to boost their sales.

Hi Gary.
This is going rather off topic, but...

The "I AM" that Dave refers to is God.

In Exodus 3v14, God refers to himself as "I AM"
In John 8v58, Jesus says "Before Abraham was, I am."
This is taken as meaning that jesus is "I AM", and so is God.

Is this correct, Dave?

Regards,

Brainbuster.

Hi Randy,

I missed your post this morning. (On CompuServe.) I didn't mean there
was anything to be "ashamed" of. It's just not the most currently
popular color in the world for a bike. Now give me a 1970 Hemi
Superbird in orange and we're in business. :-) Take it easy.

Great idea. If the bus driver had his crack pipe handy, he could have used it to bop the guy over the head rendering him unconscious. Or he could have used his old aids infected syringe to poke him in the eye. Or he could have used his 9 mm Ruger to put him in his place. Yes, that's the ticket. The Ruger is better than a a cb microphone any day.

Hi Mark,

Now that's a good idea. I bought this rig for my niece. She has an old
Uniden PC-122 that's ready to be retired. It'll also get her used to
the concept of frquencies instead of channels. For Morse she's using
the Concept 2000 rig at a whopping 200mW. The Altoids tin CW mod would
allow her signal to rise to 12W. I'll probably replace her dipole with
an Antron 99 or even a 2 el. yagi. They're (My in-laws) looking for a
house closer to us so our proximity will eventually help too. Although
I gotta tell ya, I really was surprised that with a 200mW signal, the
Morse was very readable over 15 mi. through some moderate QRM. Who'd a
thought? Take it easy.

What are the quality problems you are talking about?.... I got one in 3 days, it looked great...And it performed equal to the xforce x400. And it was about 45-50 dollars cheaper. Maybe you can help me understand.

I listened to the interview and my mind was "blown away". Dr. Welsing does not speak of any of the things you post about above. She is very intelligent, probably in the top one half of one percent of her people. Fascinating presentation and much different from what I expected.

The appropriate "audience" is EVERY 11-meter enthusiasts that's
willing to let their congressmen or senators know that this issue is a

factor in their electoral decision making process. That can be in the form of an e-mail, a good old fashioned letter, a telephone call, or just a simple little bumper sticker on the rear of "old faithful." You look at the glass as half-empty, I prefer to view it as half-full. These people may very well "transmit outside the legal 40, with excess power, etc.," but that doesn't mean they'll NEVER stop. They may even become hams. Heck, some of them could conceivably even help others to stop as well. LOL!

> Glad to see that you have dropped all the pretense about not
> supporting illegal bootlegging.

Aaron, are you talking about pretending? I don't pretend that every single FCC violation is tantamount to armed robbery. How about pretending to actually care about the citizen's band while posting repetitive Part 95 rule quotations that are readily available to those who care to read them? Tell you what; try dropping the pretense that you're about anything other than the "troll." If everyone were to magically obey all the FCC rules and cease all discussion of FCC rule violations, you'd be a pretty lonely soul. Now who's LOL!!!

You call gushing over the latest 24-32 MHz radios 'helping them to stop'?

It reminds me of an old movie called, I think, "The Junkie Priest",
featuring a priest who wanted to help junkies, so he lived among them
and became an addict himself. The junkies listened to him at first but
eventually they ripped him off and killed him (no honor among thieves
or addicts).

Hi Everyone,

I am looking to buy or trade PC/Mac hardware for a Uniden Washington Base or something simular. Have tons of PC and Mac parts and equipment i can trade, or I can buy the unit outright. Please email with price and details and pic if
possible...

Thanks!

Hello SkyhawK Not a bad price, kind of.

I bought two new Radio Shack Pro 2006 with the 800 Meg capibility out of
the box. Great Radios.

I see them go for 300 on e-bay.

Why do you have such a hard on for me? I'm not your type.

What's those stupid &# characters supposed to mean?

Why are you home on your computer at 2:30 in the afternoon? No job?

I'm going to break out my 667 just for you. I've been using my
250 because that's all I need. I may even borrow a 2950 and get
busy on the band. I'm doing it all for you, Pal.

I'll just stay so anonymous to you, it will piss you off!

Hell, I might just go drive around at a .09 level and do 56
in a 55 zone! <g>

<side note>

Damn! My power supply fan just started humming. I'll have to
grab a spare from my parts cabinet. Glad I've been stocking
them up for my friend's linears and car stereo amps.

</side note>

523. Exploding capacitor, and other, questions

Newsgroup: rec.radio.cb
Date: 2001-10-06 02:35:07 UTC
From: "Ian W. Douglas" <idouglas@calcna.ab.ca>
Message-ID: <Pine.A41.4.05.10110052033560.34226-100000@srv1.calcna.ab.ca>
Source record: 99382

I have an old Cobra Ultra Weather Band CB radio which I would like to run off the AC mains. I am presently using an old train transformer; this works, but I get a hum in the speaker and I have been told that this could overheat or damage the radio if I operate it in this fashion for more than 10 minutes at a time. According to my transmit power LED meter on the front of the Cobra unit, I can transmit at full power. The transformer has a 12 volt, 1 amp rating.

The radio says to put 13.8 VDC into it for power. Since the radio is designed to work off a car or truck battery, I am assuming that it could take a power supply of any number of amps output.

I decided to put a smoothing capacitor of 2200 uF 25 V rating across the transformer DC binding posts to get rid of the hum in the speaker.

After doing this, and powering up the transformer, I turned the radio on and got an even louder hum than before. The capacitor exploded and continued to smoke until I pulled the power plug on the transformer. The capacitor blew its top only, along its X-shaped scored lines, but there was still a loud bang and brown liquid shot out the top. I don't remember whether I had "keyed up" (i.e. pushed the talk switch in an attempt of transmit) or not.

I also tried an old PC power supply of 12 V, 7.5 A rating; this worked for awhile but then I got a lot of noise in the speaker, and I couldn't transmit at full power (according to the LED transmit power meter on the front of the unit again). Then both fuses (1 and 2 amps respectively), blew.

After all these adventures and misadventures, I tested the radio again on the train transformer and it still works, so I can still try more experiments, even though I plan on being more careful next time.

My questions are these:

1) Why did the capacitor explode? The capacitor's voltage rating was higher than that of the transformer. Was it because I installed it in backwards polarity wise?

2) How do I determine the capacitor's polarity? I'm assuming that the cap was polarized and that I connected it in backwards. It was a radial electrolytic; the case is painted blue; one lead has a white stripe with blue arrows in it on the case, running down the case near the lead. There are no + or - signs anywhere on the cap's case or ends.

3) Why did the PC power supply blow my radio's fuses? The power supply was no bigger than a car battery (or so I'm thinking).

4) Assuming I want to try the capacitor trick again (with a bleed down resistor in parallel with it, of course) what rating cap should I use. What if I try again with a 1000 uF 35 V cap? I can get this size cap easily. What if I used a non-polar or bi-polar cap?

5) Can I really damage my radio by running it on unfiltered AC for long periods of time (assuming I'm not feeding too much power to the radio)?

6) I might be willing at some point to invest in a 3 amp 12 VDC filtered power supply, but will this give me more transmission power than the train transformer--not just filtered DC? Why would I necessarily want a power supply of this exact calibre? In other words, should I be content with the train transformer (especially if I get the filter setup right) if my transmit power meter says I am transmitting at full power? Or can I get more transmission power from a 3 amp 12 VDC power supply?

I would appreciate any help with these problems.

Regards,

Ian Douglas

>That would be more trollwork from the ARRL and the FCC. Yep, that darn,
>pesky FCC, they just keep butting in and making a nuisance of themselves,
>eh Mark?

Nope, the trollwork comes from the trolls. The FCC rules, or I should say the needless repetition of those rules, are just the tool of choice for this newsgroup's trolls. While those rules are quite correct, using them SOLEY to antagonize newsgroup posters who "discuss" activities that violate those rules is just trollwork. Nothing constructive has been added.

>Those FCC agents need to
>get a life, don't you think, Mark?

What FCC agent, Frank? I haven't seen one those since...hey, come to think of it...I haven't ever seen one of those. Take care and 73.

This may seem like a dumb question but is the output of that train transformer DC or AC? Many of the old toy train transformers were AC only. The polarity protection diode in the CB maybe shorting out one half of the AC voltage being supplied to the radio, which then effectively leaves you with a halfwave rectified voltage. The internal resistance of the transformer may have limited the current during the half cycle the polarity protection diode was shorting out the AC so the fuse in the line didn't blow. The halfwave rectified voltage would generate a lot of hum in the speaker when in the receive mode.

The DC filter capacitor will fail quickly if the operating voltage is way to high, it is connected backwards, or you used it across AC. Normally the positive side of an axial lead Aluminum electrolytic capacitor in noticeable longer than the negative lead. Also the negative lead could be marked by a long black strip, and arrows, running down the length of the capacitor body by the lead. A radial lead capacitor will have the black band near one end of the capacitor. Other capacitor types are marked differently depending on their construction.

I have heard of PC style power supplies being used, but they have to be "loaded" correctly to get the regulated output voltage specified. Also note the current rating for PC power supplies normally refers to the +5 volt supply since in a PC that is the supply with the largest load. The 12 volt supplies generally don't do more than a couple of amps in many cases.

You wouldn't think that a couple of hundred leather-clad bikers would "fit in" in a quite harbor tourist spot, but it actually is a really cool contrast. It's not only the parking lot. As you walk around there are beautiful bikes of all sorts parked everywhere. I stepped into that Harley Davidson shop, you wouldn't believe the prices! They have childrens wear too, super expensive. Take care guys and 73.

I have no idea what I'm doing so I need some help. I have a handheld cobra 45wxst. I went to radio shack to get an antenna for it and they gave me this:
http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F001%5F002%5F004%5F000&product%5Fid=21%2D994. But then I went to Sears and saw this
http://www.sears.com/sr/product/summary/productsummary.jsp?BV_SessionID=@@@@1323199958.1002342110@@@@&BV_EngineID=hladccefjggkjbggcmgclchm.0&targetPage=%2fproduct%2fsummary%2fproductsummary.jsp&vertical=SEARS&pid=05732747000, so I bought it because it was almost half the price. Now I don't know which one to use. Which one is better, or are they both pretty useless? I really don't want a big antenna because I was going to put it on the roof. Also, it says I need a SWR meter. Radio Shack wanted $35 or so for theirs and the guy said I would only use it once so I didn't buy it--how necessary are they and where can I find a cheaper one? Sorry for the dumb questions, I'm new at this.

Three guys, a Canadian, Osama bin Ladin and Uncle Sam are out walking together one day.
They come across a lantern and a Genie pops out of it.
"I will give each of you each one wish, that's three wishes total," says the Genie.
The Canadian says, "I am a farmer, my dad was a farmer, and my son will also farm. I want the land to be forever fertile in Canada."
With a blink of the Genie's eye, 'POOF' the land in Canada was forever made fertile for farming.
Osama bin Ladin was amazed, so he said, "I want a wall around Afghanistan, so that no infidels, Jews or Americans can come into our precious state."
Again, with a blink of the Genie's eye, 'POOF' there was a huge wall around Afghanistan.
"Uncle Sam" (A former civil engineer), asks, "I'm very curious. Please tell me more about this wall."
The Genie explains, "Well, it's about 15,000 feet high, 500 feet thick and completely surrounds the country; nothing can get in or out---virtually impenetrable."

"Uncle Sam" says, "Fill it with water."

No. If they do not normally communicate on the CB band, then they are not CBers. The Hams that go to the CB bands simply to create as much havoc as possible are still Hams -operating out of band.

No Fear <nofear@home.comm> wrote:
: Interference is usually taken to mean any unwanted signal (or noise) that,
: by adding to the desired signal, degrades reception of the wanted
: information.

: There are (at least) two ways in which a transmission can make its presence
: be heard on frequencies at which it is not intended to be heard - ie., it
: is interfering with other traffic.

: There is a perfectly good, legitimate, well-controlled and strong
: transmitted signal. But the receiver is not tuned to it. The receiver is
: tuned to another frequency. The receiver front-end selectivity is not good
: enough and the strong unwanted signal is present at the first receiver

Good, to here.

: stage. The receiver gain is very high because it is tuned to a nearby
: signal, And so the strong but unwanted signal is amplified and overloads the
: receiver at some stage. It may even overload the first stage.

If the receiver is tuned to a nearby signal, the gain is probably turned
down. But this is immaterial, as what matters is the ratio between the
desired and undesired signal strengths appearing in the first stage
passband.

The interferance can occur - whether or not there is any front end
overload.

: When a nice sinewave signal is overloaded it is converted into a squarewave
: and its nice rounded sinewave has its ends chopped off. A squarewave has
: frequencies which are not present in the original sinewave. And so the
: originally good strong signal can be heard on the frequency of the weak
: unwanted signal. It is heard as noise and splatter. But the fault lies in
: the receiver.

A clipped sine wave is NOT converted into a square wave. But you are
correct in that a clipped sine wave contains all sorts of harmonics
that were not in the original signal.

And the problem is the interfering signal being heard on the frequency of
the desired signal.

Also, the overload can occur in any stage of the receiver, not just the
front end.

: Remember that a huge number of signals are presented to the front end of the
: receiver, and the task of any radio is to pick out the wanted signal and
: reject the rest.

Obvious.

: But, no transmitter puts out a pure signal, so in addition to the main
: signal, there will be harmonics and spurs. These impurities really can
: interfere with other signals. There is no way to completely eliminate spurs
: and harmonics; they are a fact of life in radio-frequency circuits.

Correct. These harmonics and spurs are required by law to be suppressed
to a rather low level. For amateur transmitters, if I recall correctly,
they must be at least 40 dB down from the fundamental frequency. In other
words, for a 100 watt output transmitter, the harmonics/spurs must be
below .01 watts (10 milliwatts).

And in the restricted sense of what Bert was referring to, propagation
beyond usual ranges, you basically have three choices. When the tropo is in
on VHF every taxi dispatcher on the planet is babbling to his counterpart,
every police dispatcher is trying to figure out if Unit 16 is HIS Unit 16,
and fire alarms go off in 17 stations in 15 states. Public safety is one
thing, taxis are another.

So you can:
1) have some fun
2) do the best you can in context
3) set the rule book on the altar and worship it.

Given that no essential service is served by CB in the first place, at worst
skip shooting in the legal 40 falls under the heading of 'who the hell
cares?'

You seem to be setting up Part 95 as some sort of Golden Bullock (better
translation than Calf) and worse yet become its High Priest. I don't care
if you break out in hives, I got my copy of Part 95, sitting on the
dashboard of my car.

The gung-ho shall inherit the Earth; they deserve it.

1. A handheld cb is fairly useless for anything over a 1/4 mile or so, and often marginal inside of 1/4 mile.
2. Any cb antenna you can mount on the roof will improve the situation, and for your purposes, one is about as good/bad as another.
3. You can probably get away without using an swr meter--it won't make much difference in this case, and you don't know what to do with it anyway.
4. $35 for an swr meter is pretty cheap to begin with. A good one costs much more. Call a local cb shop and see if they can't fix you up with something more useful.

Why are Brownings so expensive? $511.00 at last check. Is the performance superior or is it a cult following? Sorta like the Collins thing with older hams.

1282224454
This Item is an amplifier that works between 24 and 35 megahertz,
which makes it illegal, as it can be used on the CB band. In fact, the
seller even states in the auction title that the item is for "HAM/CB".
Any amplifier that works with less than 50 watts drive power, or over
that frequency span, is illegal. Please verify this with ebay's FCC
contacts if need be. These devices can cause electronic interference
to other communication services, like public utility, commercial,
emergency, and tv stations.
That is expressly why they are banned.

Hello Gary: Its obviously you need some supervision here, with accurate advice. I'll help!

I know what a guy I am!

Gary Danaher wrote:
>
> 1. A handheld cb is fairly useless for anything over a 1/4 mile or so, and often
> marginal inside of 1/4 mile.

No. Hand held CB will will work a few miles, even inside a car.

> 2. Any cb antenna you can mount on the roof will improve the situation, and for > your purposes, one is about as good/bad as another.

Again wrong. The better the antenna the better the performance, simple. Even for the noted situation.

I suggest a magnet mount Wilson 1000 antenna.

> 3. You can probably get away without using an swr meter--it won't make much
> difference in this case, and you don't know what to do with it anyway.

Close to technically correct, but finishes with a insult.

There is enough help here on this ng that show and teach you how to use a SWR meter.

> 4. $35 for an swr meter is pretty cheap to begin with. A good one costs much
> more. Call a local cb shop and see if they can't fix you up with something more > useful.

This is good advice, but 1 out of 4 is failing in anyones book.

I wonder what makes you so unfriendly Gary. I have some squeziiins that out to mellow you out, couple of bucks for the jar. Give me ah call on 12 AM or 38LSB, just ask fer Jay in the Mojave.

Glad to be of assistance.

Have a nice day.

Hello Mellisa: If you need any help on the CB Radio stuff we can help!

Put a Wilson 1000 magnet mount antenna on the car and you'll be ah hummin...

Is big Ten-4

September 19, 2001
Mr. Sidney Lee Martin
1614 Highgrove Court South
Surfside Beach, SC 29575

Re: February 11, 2000 Warning Letter
EB-99-DT-076

Dear Mr. Martin:
It has come to our attention that you are manufacturing and marketing various non-certified external radio frequency power amplifier kits and external radio frequency power amplifiers in violation of Section 302(b) of the Communications Act of 1934, as amended [47 U.S.C.&#65533; 302(b)], and Section 2.815(b)&(c) of the Commission's rules [47 C.F.R.&#65533; 2.815(b)&(c)].
On February 11, 2000, the Detroit Office of the Commission issued a warning letter to you as a result of your February classified ad in QST magazine featuring the sale of external radio frequency power amplifier kits capable of operating in the HF and 6 Meter bands of the Amateur Radio Service. The Detroit Office's letter requested you to furnish the certification numbers issued by the Commission for the different types of HF and 6 Meter kits sold by you. The letter warned you that the offering for sale or marketing of external RF power amplifier kits capable of operating on frequencies below 144 MHz without FCC certification is a violation of Section 2.815 of the Commissions rules.
In your response dated February 25, 2000, you claimed to be in compliance with the certification rules because it was your opinion that, according to Section 97.315(a) of the rules, every licensed Amateur operator may purchase and construct or modify one unit of one model of a non-certified RF power amplifier or RF amplifier kit from another licensed Amateur per calendar year for personal use at his station without a grant of certification. By that statement you appear to be claiming that you are an Amateur selling only to licensed Amateurs, and therefore, claiming you comply with the Section 2.815(b) and (d) of the Commission's rules.
We reject the analyses that you presented in your February 25, 2000 response. You indicated that non-certified external radio frequency power amplifier kits operational below 144 MHz are legal for you (as a licensed Amateur radio operator) to manufacture and market. Your company, RF Electronics, is manufacturing and marketing principally non-certified external radio frequency power amplifier kits. Section 2.815(c) of the Commission's rules requires ALL EXTERNAL RADIO FREQUENCY POWER AMPLIFIER KITS CAPABLE OF OPERATION [WHEN ASSEMBLED] ON FREQUENCY(IES) BELOW 144 MHz TO BE FCC CERTIFIED PRIOR TO MARKETING. Section 2.815(e) only applies to certain already fabricated amplifiers and does NOT exempt amplifiers kits from the requirements of Section 2.815(c). Under Section 2.815(c) of the

Commission's rules, no external radio frequency power amplifier kit capable of operation, when assembled, on any frequency or frequencies below 144 MHz may be manufactured, sold or leased, offered for sale or lease (including advertised for sale or lease), or imported, shipped, or distributed for the purpose of selling or leasing of offering for sale or lease UNLESS THE KITS HAVE RECEIVED AN FCC GRANT OF CERTIFICATION. Likewise, Section 2.815(d) of the Commission's rules also addresses only the conditional selling of certain already fabricated amplifiers and does NOT exempt any amplifier kits from the prohibitions of Section 2.815(b). Under Section 2.815(b) of the Commission's rules, no external radio frequency power amplifier kit capable of operation, when assembled, on any frequency or frequencies between 24 and 35 MHz may be manufactured, sold or leased, offered for sale or lease (including advertised for sale or lease), or imported, shipped, or distributed for the purpose of selling or leasing of offering for sale or lease. Moreover, a licensed Amateur radio operator would be in violation of Section 97.315(b)(3)(i) of the Commission's rules if he or she used in or attached at any station an external radio frequency power amplifier(s) that he or she had constructed from a non-certified external RF power amplifier kit(s).

In your above referenced response, you cited various ads by other companies appearing to market what you describe as non-certified, illegal CB amplifiers and kits. However, it appears that in most of the examples you cite, only a single component or a significantly incomplete group of components may have been offered for sale. Section 97.3(a)(19) defines an External RF Power Amplifier Kit as a number of electronic parts, which, when assembled, is an external RF power amplifier, even if additional parts are required to complete assembly.

Furthermore, in your response you erroneously stated: "Now why would the FCC rules allow a licensed Amateur to modify a certified amp to make it non-certified and not allow the same licensed Amateur to purchase and build a non-certified kit? The answer of course is that the rules do allow them to do both, . . .". Section 97.315(b)(3)(i) of the Commission's rules, however, specifically prohibits the use in the Amateur service of an amplifier that the operator had constructed from a non-certified kit. Also, you stated: "Licensed Amateurs have been...selling non-certified amp kits since the early days of radio". That statement is meaningless, since marketing rules restricting such sales did not go into effect until 1978.

We also find incorrect your statement that "Licensed Amateurs are well within their rights under FCC rule 2.815 to modify, . . . , and sell RF amplifiers that are capable of covering through 10M which makes them non-certified amps." In fact, the Commission's rules address modification separately from fabrication and construction. Section 97.315(a) allows the modification or construction of no more that one unit of one model during any calendar year by an Amateur operator without certification of the device. Section 97.315(b)(3)(ii) allows a licensed Amateur radio operator to use in a station an amplifier modified by him/her for use at the licensee's station. For amplifiers operational between 24 and 35 MHz, Section 2.815(d) exempts only those assembled amplifiers that were "... fabricated in not more than one unit of the same model in a calendar year by [the licensed

amateur who fabricated it]". The term 'fabricated' does not include modification of existing amplifiers. It commonly means "to construct from diverse and usually standardized parts". Pursuant to Section 2.815(b), MODIFIED AMPLIFIERS capable of operation on frequency(ies) between 24 and 35 MHz may NOT be marketed. Prior to the marketing of a modified amplifier, a licensed amateur must, if applicable, significantly restore the device incapable of operation on frequencies between 24 and 35 MHz.
In addition the violation(s) noted in the Commission's correspondence dated February 11, 2000, you are currently advertising assembled non-certified external RF power amplifiers on your Internet website: http://users.aol.com/rfelectron/rfelect.htm. This website URL appeared in your classified advertisement in QST magazine (12/99, 01/00, 02/00, 03/00 and 04/00). On this website you are currently advertising the following assembled non-certified external radio frequency power amplifiers which are described as capable of operation on frequencies below 144 MHz:
500 W complete kit package -- assembled $495.00 plus $20.00 Shipping (Cont. U.S.$)
Skymaster KW complete kit -- assembled $990.00 plus $30.00 Shipping (Cont. U.S.$)
6 meter kit assembled $495.00 plus $20.00 Shipping (Cont. U.S.$)
The Commission has no record of an FCC grant of certification for any of these external radio frequency power amplifiers. Section 2.815(c) prohibits the manufacture, sell or lease, offer for sale or lease (including advertisement for sale or lease) or import, ship or distribute for the purpose of selling or leasing or offering for sale or lease of any external radio frequency power amplifier (or amplifier kit) capable of operation on any frequency or frequencies below 144 MHz unless the amplifier has received a grant of certification or type acceptance. In the manufacturing and marketing of non-certified external RF power amplifiers, you and/or your company are NOT exempt from these prohibitions of Sections 2.815 and 97.315(a) of the Commission's rules for the following reasons:
These assembled amplifiers that you manufactured and marketed were constructed and marketed as a business operated with pecuniary interest and not as a part of the amateur service. Under Section 97.3(a)(4), "amateur service" is, by definition, to be ". . . solely with a personal aim and without pecuniary interest". Your company, RF Electronics, is manufacturing and marketing these assembled amplifiers, not as an Amateur operator but as a business. According to the South Carolina Corporation Commission, RF Electronics is a sole proprietorship. Furthermore, in your response dated February 25, 2000 you referred to the purchaser(s) of your products as "my customer". As a licensed amateur radio operator, Section 97.315(a) authorizes you to construct (without pecuniary interest) no more than one unit of one model of an external RF power amplifier capable of operation below 144 MHz during any calendar year without first obtaining a grant of certification.
You advertise the three above-listed assembled models of amplifiers as operational between 24 and 35 MHz. Pursuant to Section 2.815(b)&(d), nobody (including amateur radio operators) may manufacture and/or market of such devices unless certain conditions are met including, in part, BOTH of the

following:
The amplifier is marketed by the licensed Amateur radio operator who fabricated it for his personal use at his amateur station. The three models of assembled amplifiers that you manufacture and market were not constructed for your personal use. These assembled amplifiers are not advertised as used devices and there are no indications that you are significantly using (for personal use at your Amateur station) each and every assembled amplifier prior to selling. Moreover, pursuant to Section 97.315(b)(3)(i) of the Commission's rules, you could not have legally used such amplifiers assembled from non-certified kits. Furthermore, you were not assembling and marketing these amplifiers as an Amateur operator but as a business, RF Electronics.
The amplifier is fabricated (for the Amateur's personal use) in not more that one unit of the same model in a calendar year (and marketed only by the Amateur who fabricated it). The three assembled models of amplifiers that you advertised were mass marketed and, it is reasonable to assume, constructed in quantities greater that one of each during the calendar years 2000 and 2001. Under Sections 2.815(d) and 97.315(a) of the Commission's rules, no more that 1 unit of 1 model of an external RF power amplifier capable of operation below 144 MHz may be fabricated during any calendar year by an Amateur operator for use at a station without a grant of certification.
We find your analysis in your February 25, 2000 response NOT APPLICABLE to the assembled amplifiers that you are manufacturing and marketing. Accordingly, the Commission's warning to you dated February 11, 2000, remains in effect.
YOU MUST IMMEDIATELY CEASE ANY AND ALL COMMERCIAL MARKETING OF NON-CERTIFIED EXTERNAL RADIO FREQUENCY POWER AMPLIFIERS AND AMPLIFIER KITS CAPABLE OF OPERATION BELOW 144 MHz.
Any and all marketing of external RF power amplifiers or amplifier kits capable of operation below 144 MHz must be in strict compliance with Section 2.815 of the Commission's rules. This Commission will refer for criminal prosecution any violation of these prohibitions; and it will initiate enforcement action against your Amateur license, including revocation and suspension as well as monetary forfeiture.

Check out the tech help section on this page http://firestik.com
They have good educational info for you,basically S.W.R. means standing wave ratio or the ratio of
radiated energy versus the amount of energy that is reflected back into the transmitter.
A low swr such as 1.5:1 is great because almost all the transmitted energy is radiated from the antenna and very little is reflected back to the transmitter. A high swr such as 2.5:1 or higher is bad because a lot of energy is reflected back into the radio and tends to heat things up causing component failure.
A frequency such as 27.185Mhz or channel 19 has a basic wavelength of 36ft.(fullwave),18ft.(halfwave),
and 9ft.(quarterwave).
The best way to radiate any signal is to use a fullwave radiator or antenna but a 36 antenna is impractical to use anywhere except a remote location.
R/S sells a 1/2wave omnidirectional vertical called the Antron99, which is a base antenna designed for home use.
However a 9ft. whip (1/4wave) will work fine with sufficient ground plane or counterpoise.
There is so much to learn Melissa is youre so inclined to do so.
If you have space a 1/2wave dipole costs nothing to build and will rival most antennas once it is properly tuned. The only expense would be the coax connecting the antenna to the radio.
I gather you already have the PL259-BNC adaptor. A early Cobra25 or 29LTD would be a better choice than a underpowered H/H radio. Youre power supply could consist of a old car battery with a trickle charger. Another site for you Melissa, http://members.tripod.com/~cb_antennas/index.shtml
and another http://www.conk.com/world/kd6tas ,sorry for invading your e-mail ,Good Luck....

For a total novice, the advice was good and well founded. Hand held CBs are notoriously bad, and under no circumstances could they be
compared with traditional mobiles. The author was comparing two mobile extension mounts, either of which would have improved the situation
somewhat, and neither would have needed much adjustment. The nature of the question indicated they were quite new at this and hence would
likely have no understanding of the swr meter, what it was telling them, or how to use it. Not mean at all. Just factual. My personal
experience with hand helds is nothing short of disgusting and under no circumstances would I consider an 11 meter hand held. Under those
conditions, they might well be better off using FRS radios for the shorter distances, and in the long haul probably should give strong
consideration to these. By the time they buy the CB, the external antenna, and perhaps a meter, they have far exceeded the cost of a pair
of good Kenwood or Icom FRS radios.

I replaced a touch switch in one. It had lost it's spring back capability.
You may also want to check the rubber pad for stickiness. It's amazing
what gets into radios.

Only just realised I seem to receive replies simultaneously in my
private mail box as well as here on the ng.

Is that normal or does it depend on ones news reader?

I still need a good AC Sky amp/power supply picture/s anyone.

Take care

First, not if they are using a bona fide CB Radio. Second since the "C" in "CB" stands for "citizen" with no distinction is made based on any other class of radio license. So using legal equipment at legal power levels a Ham can be considered as much of a CBer as anybody else regardless of how frequently they use the band. Of course you can tell the difference by looking at how the S-Meter needle bounces up and down right? ;-)

I'm not convinced of that. Over here through the efforts of the FCC and pressure from local Ham operators the problem operators on the US Ham bands has seen a significant decrease. The same can happen with the CB 11m band here as well. But the point I made is it requires an interest on the part of the people using 11m to want it cleaned up, and from the posts here I don't see that. Instead they would rather let the mess wash over the adjacent frequencies until it interferes with another radio service because it is easier to do nothing than to take an active role in promoting better operations.

Of course trying to tell the neighbor, for example with the expensive large screen TV it's his TV's fault, is a hard sell. I think the problem is only going to get worse with more wireless devices being used, and people wanting wireless services.

> So you can:
> 1) have some fun
> 2) do the best you can in context
> 3) set the rule book on the altar and worship it.

Dick,

How about the keyclowns reaction when N8 flooded the NG? Suddenly 'fun' wasn't acceptable. Suddenly the rulebook mattered. Suddenly the rules were EVERYTHING.

I could understand if they were consistent, but these folks are hypocrites of the first degree. They only cry when the rules don't give them an unfair advantage.

Let's go back to #1. "have some fun". Great. No one wants to spoil your fun. But using hundreds of watts illegally to key over people having 'fun' at someone elses expense.

#2 "Do the best you can". The keyclowns argue that I am a mindless nazi who can't see common sense. If that were true I'd be goose stepping around complaining about chickenshit rules. Violating federal laws is not chickenshit. $75,000 fines are not chickenshit. Stealing frequencies from government users is not chickenshit.

#3 "set the rule book on the altar and worship it". No, Dick. The basic keyclown vs. antikeyclown argument is that amps and freebanding hurts no one, therefore those rules are OK to be broken.

First off, those practices DO hurt someone. But the keyclowns simply deny it. "Intentional QRM and frequency theft? Oh no. It doesn't exist"

Secondly, ever heard of the honor system? It works like this. Someone trusts you not to violate a rule or a law - and you do it - NOT BECAUSE THERE IS A THREAT OF PENALTY OR YOU ARE BEING WATCHED - but because you are an honorable person.

The keyclowns do the opposite. They know the FCC does not have enough agents to enforce the law - so they take advantage of this situation. They have no honor.

All kidding aside, Osama claims to act for the nation of Islam, which has no geographic boundaries. If you 'drowned' the population of Afghanistan all you'd be doing is killing a majority of innocent people who do not support Osmama's extremism. The frustrating part of this whole situation is that there is no one country that you could target for destruction in order to stop the threat of terrorism to the US.

One of the best plain old AM talkers I had was a tiny Uniden 520XL .
All I did to it was pull out the clipper and tune it for max swing,
never messed much with the wattage output and it was a screamer.

Add a decent Astatic mic, and a Wilson and you'll be heard for miles.

Nice part with that one was it will fit in between a lot of bucket
seats no problem.

Hiya,

Just curious, but is there a reason WHY one channel should NOT be used for
emergency traffice.
There are a whole HOST of other channels, USB, and LSB that are free for
use, why not,
especially in light of some of the more recent events, keep one aside for
emergency use?
It may or may not be mandated by the FCC, but it doesn't hurt anything, but
it MAY
help someone.

REACT is a great idea, why not support it?

598. Antenna Idea and Question?

Newsgroup: rec.radio.cb
Date: 2001-10-06 21:20:20 UTC
From: Frizz <lone_flanger_sonic_death@hotmailremoveeverythingafterhotmailtoreplyandadd.comthanksspamsucks.com>
Message-ID: <oAKv7.61855$0x.22322672@typhoon.southeast.rr.com>
Source record: 99608

Currently I am running a wire dipole stretched across my attic. I had the idea to run two of them and kind of make it into a directional antenna type of setup. Sort of like this(D1 and D2 are dipoles one and two):

```
| S B |
| P E |
D1 A T D2
| C W |
| E E |
N
```

Would this work? How would I connect the two? How far apart do I have to space them? Has anyone attempted something like this before? If this works I was also thinking of running two more perpendicular to D1 and D2. Any help is appreciated. Thanks!

in
> an open space.

The Motorola Spirit MV21CV operates on VHF frequencies typically 150-160 MHz
whereas CB operates at 27Mhz so they're not compatible.

You could co-phase them, putting lobes in two directions. They would need
to be 1/4 WL apart and feed with two IDENTICAL feed wires from a tee
connector.

You could also build a beam with wire. The plans and programs are available
on the internet.

The first election I could vote in was 1964 when Goldwater ran against LBJ.
To paraphrase one of Barry's election slogans, extremism in the cause of
virtue is no vice. You know what happened to him.

Sparkles, while you're explaining why things are the way they are, would you mind using the infinite wisdom that you seem to be endowed with to help G. Dubya Bush with the terrorism problem? You've covered illegal radio, legal and not legal downloads, biasing, and who knows what else in the last few months. Judging by what we've all witnessed you to be a guru of, I'm sure the little terrorist thing would be a piece of cake for you. Have you called the government to offer your services? I mean really guy, we need your talents put to use that will make us all proud.

:-)

History: NoFear said he was going to download "The Devil...Georgia"
from the internet, which is perfectly legal if: (1) He has paid for
a legitimate music dl service; or (2) If the song is not the original
version by the original artist; or (3) He has already paid for a copy
of the original through a purchase using the same or other media.
Train, in an effort to rebuke anybody that disapproves of his illegal
activities, turned off his brain and accused NoFear of doing something
illegal by downloading the song off the internet.

Train doesn't seem to understand this issue. Do you?

This was NOT discussed in the original thread so don't inject it at this
time to make me look as stupid as you may think I am.

or (3) He has already paid for a copy
> of the original through a purchase using the same or other media.

This has NEVER been in the courts yet and until such time it is considered
as illegal as anything else that would not be permitted from a site or
service such as Napster.

> Train, in an effort to rebuke anybody that disapproves of his illegal
> activities, turned off his brain and accused NoFear of doing something

PROVE my illegal activities. You can banter all you like but until the time
comes that you can PROVE I have done anything illegal (such as being the
internet amp magnate you propose) you would be best served by speaking only
of things you have even a fucking clue about.

>
>

Stacked dipoles have been around a while. Standard spacing is a quarter wave, 251/f(MHz) in feet 3013/f(MHz) in inches or 111 inches at 27.1. This is a tad longer than the quarter wave whip at about 108 because the very high voltage at the tip tends to couple in a few surrounding inches.

Laying them parallel horizontally will give directivity but up and down which you do not need so they are customarily one above the other. The resulting pair will have gain in the broadside direction but essentially the same directivity as a regular dipole. You feed them from a T fitting in the middle.

Attic antennas typically suffer from having the large magnetic near field near the antenna, more so at the feedpoint, couple to every roofing nail in the vicinity. Signs of this are having to cut the dipole much below the usual 216 inches or so, broadband response - essentially equal SWR across a band (you want 1:1 use a dummy load), and a likely SWR about 1.6:1 because the feedpoint impedence is about 30 ohms. May well be lower than that.

There are some other approaches that might do you more good, the folded dipole and folded tripole, both were common in 1950 television antennas fed with open line (no, we will use coax). They multiply the feed impedence by

4 and 9 respectively and therefore lower the magnetic coupling in hostile environments like attics. The higher input impedences give you bandwidth without having to sneak a resistor into the system. The tripole is actually easier so let us start with that one:

```
216 inches
=========================================
|
|1-3" spacing, not critical
================== feed in center =============
|
|
=========================================
```

Three wires spaced 1-3 inches probably with a few non-metallic spacers from your junk.
The ends are tied together. The plane of the three wires is not significant so long as it is the same plane and the spacing is more or less equal.

The feeding is a bit more difficult because we are going to build a 4:1 coax balun. For this you need to know the 'velocity factor' of the coax. A good guess is 0.83 which just means that rf flows at 83 percent of the speed of light. So the 111 inch quarter wave becomes 92 inches instead. Most smaller coax like RG58 will be .83 with foam and .66 with polyeth. The feed looks like this:

```
|-------|
| | 92 inch piece or ?
O O
|
|
```

From station. All shields soldered together and kept the hell out of the way. As a practical matter, it is easier to tape the balun to the station feed. I have been known to use a small piece of plexiglas or polystyrene and some machine screws to keep things in the center neat and tidy and provide some support: coax is not light.

The resulting antenna should have a feedpoint impedence in the 230 - 300 ohm range which should give at least a 1.5:1 match with the 200 ohm feedline. You will notice some frequency sensitivity which I will bet you do not have now; trim the ends to suit, equally of course.

The folded dipole is essentially similar except that you have to sneak in a quarter-wave (velocity factors all over creation) between the antenna and the feedline which by the time you get done with barrel connectors etc is a pain in the drain. Only the fed part and one loop rather than two.

The crossed dipoles I will leave to you. Find an FM antenna, Radio Scrap probably still makes one (they were big when Muzak was on FM SCA drops rather than satellite) and contemplate and cogitate how they fed two folded dipoles to a single feedline.

Dick N&#65533;BK

The FCC says offering CB amps for sale is illegal.

Your post of 14 April clearly offers CB amps for sale.

You can come up with all the phoney excuses you like,
but both you and I know that I am right.

-Aaron-

FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture,
sell or lease, offer for sale or lease (including advertising for
sale or lease), or import, ship, or distribute for the purpose of
selling or leasing or offering for sale or lease, any external
radio frequency amplifier or amplifier kit capable of operation
on any frequency or frequencies between 24 and 35 MHz.

--

Subject: MOBIL AMP SALE
Date: Sat, 14 Apr 2001 19:09:40 GMT
From: "Train" <cbmods@optonline.net>
Newsgroups: rec.radio.cb

As a public service to the NG, I will be offering to sell mobil amps to
those wishing to buy them. This is not done out of greed but out of
necessity to thwart the losers in the NG who think they have taken over OUR
nice little group and can use it to harass and belittle as they see fit. To
offer sale of these items is just the thing needed in a public forum to mess
with these nil-minded simpletons. Amps such as Texas Star, Palomar, Cobra,
Messenger, Gray, Galaxy, X-Force and so on. These will be sold for a limited
time and at a VERY small profit IF ANY !

This is not a money thing so much as it is an access thing.

Since these self appointed radio/computer gods have declared knowledge an
illegal thing also, I might just make the entire Secret CB book series
available on CD along with a CD of amplifier schematics for base and mobil
amps. Why is it that when these morons just think they are getting somewhere

in their fight somebody like me comes along and pisses on their parade?
BECAUSE THEY NEED IT AND DESERVE IT!!!!!!!!!

E-Mail me with your needs......

Uniden PRO-510XL,PRO-500D,PRO-520XL
POWER TWEAKS:
1. Locate the 2.7 ohm resistor in front of the final bias resistor(15 Ohm
w/RF bead) and change it to a .47 Ohm. (DO NOT change the 15 Ohm resistor!!)
2. Re-tune L9,L6,L5,L4 for maximum forward power.
MODULATION: Cut D14
AM POWER: L6,L5
VR1: Squelch
VR2: TX meter
VR3: RX meter
VR4: RX IF gain

Just imagine the headlines...

PARKING OFFENDER GETS LIFE. When asked about his strict ruling, Judge Voobner said "You have to get over this notion that there are degrees of criminality. A criminal is a criminal, and must be punished."

SPEEDING MOTORIST GETS THE DEATH PENALTY. When asked about his ruling, Judge Voobner said "He was doing 56 in a 55, the law is the law." The arresting
officer, officer Gilliland, had this to say: "It was our colleagues in the next county who first spotted the 'SpeedClown', but I asked them to let him cross the county border. I knew that if I got him up before Judge Voobner, he would be properly punished for this horrendous crime".

Brainbuster.

No need to imagine. Check out:

http://www.arrl.org/news/enforcement_logs/2001/0811.html

<<Please be advised that operation of radio transmitting equipment without a license is a violation of the Communications Act of 1934, as amended, 47 U.S.C. Section 301 and will subject you to fine or imprisonment, as well as an in rem seizure of radio transmitting equipment, in cooperation with the United States Attorney for your jurisdiction. Fines normally range from $7,500 to $10,000.>>

Brainbuster, you say that defying FCC rules is a trivial offense. You compare it to a parking violation or a speeding ticket. Why not call or write the FCC and complain? Surely they will see your logic :)

Of course there are varying degrees of deviant behavior. But it's
completely ridiculous to compare RF piracy to speeding 1mph over the
limit. If you want to compare it to something, find a similar crime
with a similar punishment -- spitting on the sidewalk won't get you
the maximum $75,000 in fines and 1 year imprisonment. It won't even
get you close to a fine that has been reduced from the $17,000
benchmark. So just keep up with the stupid arguments, they make you
look like all the other keyclowns.

BTW, what's this damaging info you have on me? There are a lot of
people here that don't like me and would be happy to see what you
have, assuming, of course, you are not just full of shit.

False accusations? Do you mean like saying I'm Voobner and vice-versa?
Hypocrite! And should everyone just sit around like lumps on a log
instead of taking an active role in their ever-expanding communities
on the internet and on the air-waves? If you say 'yes', then sit back
and stuff your face with apathy pie while the rest of us work to clean

up our environments. And since you would rather stick your head in the sand, don't complain when it doesn't come out the way you want (and I'm also speaking to all citizens that can vote)!

Keep it up, brainfart, you are getting more transparent each day!

Or even a politician that admits he to drove under the influence of alcohol. Heck, such a "felon" could even become president. Let's go down to a misdemeanor. How about a politician who admits to having indulged in a "recreational pharmaceutical?" (But not inhaling.) Wonder if he coul get elected to the nation's highest post.

Now I'll indulge in a little AKC screen-name (anti-)logic. Just because RF piracy carries a higher "monetary" penalty than drunk driving, do you actually believe it's a more severe offense? Mybe we'll see one of those commercial showing us home videos of a teen enjoying life followed by a somber message; John Q. Public, interfered with by a freebander. Mark and Dick are right. You guys can be absolutely amusing at times.

Aaron, I think the point he was trying to make is that while freebanding and grossly excessive power levels (Common sense moment.) might warrant heavy fines, running a few watts over or working DX on the legal 40 just doesn't merit the same severity of punishment. In this case the punishment comes not from the commission, but from people that have nothing better to do other than post FCC regs ad nauseum in an attempt to incite petty arguments.

The whole purpose of Landsissy's post of exaggerated penalties for law violations is obvious.

He along with the other sissy boys desperately needs a way to minimize his criminality and divert focus from it. In so many words he is saying "Hey, I am not as big of a criminal as some, so quit bitching about it."

This is in line with all the other Kryclowns.

The bottom line is that these socially mutant criminals badly need a way to minimize their criminality. If they could do this then the criminal activities they perform and promote would inch toward social acceptance.

The whole situation is simple. They know they are criminals, feel bad about it, hate being reminded of it, and will do anything to keep their happy little mass delusion of acceptability going. This is of course the same thing all criminals usually do. You see, "the system victimizes me". Keyclowns think like this, and want all the right thinking legal ops out here to think that way as well. If they did then keyclownism would creep toward being socially acceptable.

Never will happen keysissies.

Hello Gary:

Suggest you keep you day job. Your handling customer service, or help inquiries needs a little touch up.

Here are some exercises to stimulate a little character:

Suggest, shooting skip, running excessive power, chasing girls around, goin shootin, hikin round, slid on by the local "Dew Drop Inn" play pool, drink ah few, arm wrestle, shot darts, tell lies, tell all the bikers that your 2 cycle rice burner will kick all there ass's, and most of all have a good time with your new made friends.

Jay in the Mojave

651. Re: What "Sparky" Gilliland thinks...

Newsgroup: rec.radio.cb
Date: 2001-10-07 17:03:04 UTC
From: Brainbuster <brain@buster.com>
Message-ID: <9pq3evlul1@chilli.nntp.netline.net.uk>
Source record: 99663

So "Sparky" thinks that I am a moron.
Well, considering that he thinks that an SWR of 2:1 is a loss of 25%, and
he thinks that VSWR is the ratio of voltages...
And considering that he cannot understand that I have blocked him (although I
made it clear in several posts)...
We really don't need worry about what "Sparky" thinks.

Proof of Sparkys delusions can be seen in this post from July...

Frank Gilliland <sparky@cet.com> incorrectly wrote in message
news:3b30c643.1998281@news.cet.com...

| Since Brian doesn't want to explain it....
|
| Voltage Standing Wave Ratio is calculated by dividing the forward
| voltage by the reflected voltage. Current SWR is the same but using
| current. Since the impedance of the forward and reflected signals are
| the same, most SWR meters measure only voltage.
|
| If the VSWR is 2:1 then the reflected voltage is half the transmitted
| voltage. Again, since the impedance is the same for both signals, the
| reflected current is half the transmitted current. Therefore, the
| reflected power is half the forward voltage times half the forward
| current, or, one-fourth the forward power.
|
| 25% loss.

If only he had taken the time to check his theory in some book, and get his
facts straight (like others did)... before "running his yapper".

Maybe he should remember who corrected him on his crazy made up theory. If
he needs to be corrected by a "moron", then this does not say much for his
intelligence.
Proof that he still "runs his yapper" without checking his facts first.

Brainbuster.

^
^ I'm not convinced of that. Over here through the efforts of the FCC and
^ pressure from local Ham operators the problem operators on the US Ham bands
^ has seen a significant decrease. The same can happen with the CB 11m band
^ here as well. But the point I made is it requires an interest on the part
^ of the people using 11m to want it cleaned up, and from the posts here I
^ don't see that. Instead they would rather let the mess wash over the
^ adjacent frequencies until it interferes with another radio service because
^ it is easier to do nothing than to take an active role in promoting better
^ operations.

Using the law to clear up the problem is rather different to using abuse and
offensive language on people who use the newsgroup.
Those who are giving abuse, using foul language, and making false accusations
are NOT making a difference, except to annoy all the newsgroup users, and
make people hate the term "pro-legal".

If these people really care about the law, why do they not let the law deal
with the problem?

---
^ Of course trying to tell the neighbor, for example with the expensive
^ large screen TV it's his TV's fault, is a hard sell. I think the problem is
^ only going to get worse with more wireless devices being used, and
^ people wanting wireless services.

But it is also hard to tell the LEGAL CBer that the fault lies with him.

How can you blame the CBer if his setup is legal, and the emisions are within
the allowed figures?
UK TV is on UHF... yet legal CB can still intefere with the TV. The CBs are
not putting out large signals at 500MHz +, the TVs are just not rejecting
27MHz.

The chances of this happening can be limited be the CBer being careful about
his antenna position and SWR. But when the message is that "illegal CB
inteferes", try convincing a legal CBer that he should worry about
inteference.
The attitude is "so what, my CB is legal... you sort it".

Regards,

Brainbuster.

news:86es7.95929$Hm.1093435@typhoon.mw.mediaone.net...

^ Sounds like a case they had over in Ferndale a few years ago. It turned out
^ to be a CBer running power. My lady friend, that lives in that area, can't
^ tell the difference between a CB and a Ham operator. I would suspect many
^ lay people are like that.
--

It gets harder with the 10 Metre mobile antennas. I once saw a sticker on a
car stating that the driver was NOT a CBer. The amateur probably got fed up
with being asked what his "handle" was.

Another problem we have seen in the UK is where CBers try to track a music
playing "wally". Some get within 1/2 mile, then look for the first antenna
they see. Very few have the equipment needed to make sure they are cutting
the right coax.

One thing I miss are the CB "fox hunts", not known of any for years. I knew
one CBer who had a K40 mounted on the rear end (the car, not his rear end).
The first thing he would do was find the nearest roundabout and go round once
in each direction (rather naughty), he would then name the street. He was
amazingly accurate with the street name.

--
^ Hasn't happen to me because all my antennas are inside, except the few
^ times I set up outside to test my 2.4GHz satellite down-link. Nothing like
^ a weird looking 40 by 24 inch grill dish antenna mounted on a camera tripod
^ with other radio equipment for people to stare at in the dark around
^ 11:30 PM. 8-))
^ The growing antenna farm on the top of my van is getting more attention
^ since I added a 2m horizontal loop for better sideband operation a few days
^ ago.
^ Lately when I get out of the van wearing shades and a plain black cap I see
^ people looking, but nobody wants to ask any questions like they normally
^ do.
^ They try not to look, but I see them doing it when I'm in the party store
^ or some place else with windows.
--

It's not often you see a hedgehog on wheels :~)

--
^ Now if you can convince some other parties on the group to buy in to that
^ idea you could end up being famous yourself. 8-)) But don't worry. I know
^ one or two here that seriously believes in "Don't confuse me with the

^ facts, my mind is already made up" idea.
--

Nobody has the monopoly on this Idea. I also see this attitude from certain
"pro-legal" users of this group, who have made up their mind that those who
disagree with their tactics must be illegal operators.

--
^ They keep bringing up past wrongs and accuse the wrong parties of
^ the dirty deed so often that just about everybody thinks they're nuts.
--

I don't. Whoever made the posts, is most likely still here, and the question
is "who are they".

--
^ Of course if you read any of the prior posts you would understand.

It depends upon how far back you are referring to with "prior posts". My ISP
only stores 4 weeks of post, but it was 2 weeks until a recent upgrade.
I do remember the famous "MIBX" posts, but I tend to block those who post
nothing but abuse.

Regards,

Brainbuster

Maybe they are also Amateurs, and want to use one meter for both CB and Ham.

Does US law state that this cannot be done?
Is it illegal to use a "Bird" watt meter to test a CB??

PLEASE NOTE:
A power meter does NOT, I repeat, does NOT increase power output. It only
measures power... no matter what slug you put in it.
I can use any power meter I like on my CB.

Next they will be saying that a CBer cannot use a frequency counter capable
of measuring frequencies outside the CB band... LMAO.

659. Re: Exploding capacitor, and other, questions

Newsgroup: rec.radio.cb
Date: 2001-10-07 17:04:55 UTC
From: Brainbuster <brain@buster.com>
Message-ID: <9pq3fnlul9@chilli.nntp.netline.net.uk>
Source record: 99671

A model train psu is not the correct type of psu for a CB.
It may be ac (not dc), and the current rating may not be high enough.
You must use the proper psu for the job.

> 1) Why did the capacitor explode? The capacitor's voltage rating
> was higher than that of the transformer. Was it because I installed
> it in backwards polarity wise?

Electrolytics can explode if subjected to a reverse voltage, an AC voltage,
or a voltage above their rating.

> 2) How do I determine the capacitor's polarity? I'm assuming that
> the cap was polarized and that I connected it in backwards. It was
> a radial electrolytic; the case is painted blue; one lead has a
> white stripe with blue arrows in it on the case, running down the
> case near the lead. There are no + or - signs anywhere on the cap's
> case or ends.

The white band is negative, the positive is sometimes marked with a + (but
not always).

> 3) Why did the PC power supply blow my radio's fuses? The power
> supply was no bigger than a car battery (or so I'm thinking).

The psu did not... the CB did. This indicates one of the following:
1. Reversed supply to CB.
2. AC supply to CB.
3. CB protection diode shorted due to reversed or AC supply.

In any case, find and cure the fault BEFORE changing fuses or experimenting
any futher.

> 4) Assuming I want to try the capacitor trick again (with a bleed
> down resistor in parallel with it, of course) what rating cap should
> I use. What if I try again with a 1000 uF 35 V cap? I can get this
> size cap easily. What if I used a non-polar or bi-polar cap?

DON'T. The exploding cap shows a serious problem... cure that first. A correct psu will NOT require any external caps.

> 5) Can I really damage my radio by running it on unfiltered AC for
> long periods of time (assuming I'm not feeding too much power to the
> radio)?

YES, you can do serious, permanent damage.
The supply must be regulated DC. You cannot just "filter" ac, it must be rectified, smoothed, and regulated.

> 6) I might be willing at some point to invest in a 3 amp 12 VDC
> filtered power supply, but will this give me more transmission
> power than the train transformer--not just filtered DC? Why would I
> necessarily want a power supply of this exact calibre? In other
> words, should I be content with the train transformer (especially if
> I get the filter setup right) if my transmit power meter says I am
> transmitting at full power? Or can I get more transmission power
> from a 3 amp 12 VDC power supply?

You should be willing to invest now, or you may not have a working CB to connect.
It is not about power, it is the difference between food and poison... one makes the thing operate, the other will kill it.

You NEED a 13.8 volt DC regulated power supply, rated for 3 Amps or more.

--

Before you go any further, get the CB checked. If the CB is damaged, this could then damage a power supply.
Next, get a proper regulated supply... it is not an option, is is a requirement.

I hope this helps.

Regards,

Brainbuster.

sung to the tune of bob dylans the times they are a changing

come all troubled antis
throughout the land

come criticize what you
will never understand

these amplifiers and keydowns are beyond your command

your iambic keys rapidly aging

so you better start talking while you still got the chance for the DX is rapidly fading

dont curse at me cause I talk out of band

go ahead talk like an ass

I dont give a damn

your speeches and cries they talk to the hand

why must you alway be hating

so you better start talking while you
still got the chance for the DX is rapidly fading

To all the antis who dont have a clue

who sit around the monitor

with nothing to do

except cast a judgement on me
and you

when their own yard is in need of changing

qrm sparky leland and n8

speak with forked tongue
all filled with hate

cant be accepted
or find a mate

for they are just naturally losers

yes they sit around thinking up ways to make strife

to lighten the fact they have no wife or life

they cant key a mike
or have any fun

superstars will never talk to these bums
anal retentive
walking to bars

shoe leather express
they cant afford cars

they cant get out past the end of their block
that big maul in Texas wont let them talk

they cry like school marms
all through the year

about me and my amplifier
its music to my ears

we all stay in control
antis try to aggravate

they cant make a life

or even procreate

their battle cry is as weak as their call

is it no wonder we laugh as they fall

pointing and laughing at them as they prove it

the best part is
they dont even know it

keep using those amps across the land
talk to Germany Spain and maybe Iran

laugh at the antis whenever we can
the DX is rapidly fading

Napster is still operating, they werent shut down there were copyright exclusions limiting the ability to d/l certain music. If you don't want your music traded the copyright owner must notify Napster, It is up to the owner of the music not Napster. There are many artist who don't mind having there music distributed in this form and they continue to do so. There are also other sites where you can download music for a fee or for free. Read on Then you tell Me.

<<Straight Outta Napster.Com>>

Copyright Owners
Upon proper notice to Napster, Napster is ready and willing to use its file name filtering technology to prevent access through the Napster system to any work that a copyright owner or its duly authorized agent claims to own or control. The U.S. District Court in San Francisco issued an Order on March 5, 2001, that calls for Napster to exclude individual file names from the Napster index, certified to contain the copyright holder's work, and the correlating Artist & Title pair (or Composer & Title pair) for the work. Once excluded, a file on a user's computer under that Artist & Title pair (or Composer & Title pair) or file name (or reasonable variants thereof) will not appear in the index of files available to the Napster sharing community.

Once you supply us with the foregoing information for each of the songs you want blocked, we will act to disable access to that file name(s) and to other file names that contain the song title and the performer's (and/or composer's) name. We encourage you to supply us with any other file names and reasonable variations used to identify artists and titles that you believe embody your works in the Napster index, so that we may be as successful as possible in blocking such variations.

.

Information for Owners of Composition Copyrights:
If you wish Napster to block access to works in which you hold composition copyrights, please consider that many song names are common names (for instance, "Tomorrow"; "Candle"; "Looking Glass"; etc) used by more than one artist. As to all such songs, the Court's Order requires the copyright claimant to identify which files, among similarly named songs, contain the particular composition to which the claimant owns copyrights. Because most of our users tend to list not composer names, but performers' names, we request that you provide us the name of the performer(s) of each song that you contend are available in the Napster index, so that we can act to block your works by reference to the song title paired with the performers' names as well as with the composers' names. Please note that notices containing only the title of a composition do not comply with the Court's Order, and we

cannot act on them.

Darryl:
Generally, most anything will work better that a mag mount type antenna.
My guess is that the firestik would work better, however somewhat directional.

Hi Robbie:
What I want to know is who the h--- told you to take one of them off.
Should have been a perfectly good system. Dual antennas, with a good
antenna match, as you had, would have given you better reception due
to antenna gain, but with a certain amount of directivity.

Yes they will, or at least the early ones did. Now, if you mean will they perform like the splatter boxes you hear on the "bowl", chances are no, very much like the HR2XXX and Lincolns. But if you want clean audio, they are fine.

Mark,

You guys know darn well it isn't the "few watts" and "dx on legal 40"
that I complain about.

And you also know darn well that the FCC doesn't slap $75,000 fines on
violators of a "few watts" and "dx on legal 40".

But like Bert, this is the only game you got. So you play it.

You replace "big watts" with "few watts" and "freeband" with "dx on
legal 40"....and suddenly your argument looks semi-reasonable and ole
Voobner appears like a fanatic and the FCC appears like the Gestapo.

Sorry to sink your canoe but that ain't reality, fellas.

Reality is that you guys want your amps and export radios.

And you simply "don't care" if they get operated on illegal
frequencies and do cause unnecessary interference to other users and
services.

There's nothing noble or socially uplifting about that.

So spare us this crap about being unjustly persecuted for petty
infractions. No one is buying it.

I didn't see the start of this thread - just reset all my newsgroups - but SWR does NOT indicate any prticular loss. Ladder line is often used in long wire antennas that are not tuned (to minimize loss with high SWR). Heck, my best antenna ever probably had SWRs in the 5 or 10 to 1 range in many areas. If anyone checks out coax loss, you will find loss rated at 30 MHz per hundred feet at 1:1 SWR. You also can find ratings on the same coax with higher SWRs. There is no fixed loss on any given SWR, just that loss gets higher with higher SWR - but, again, you can have a high SWR without high loss. Oh well ...

Now mention that the input impedence of the universe is 377 ohms and that their 1:1 matched quarter wave will have near fields (standing waves, right?) equivalent to something close to 10:1 SWR and watch them faint.

You are not a nice man, James.

An unfortunate choice of terminology (impedence) when what it really is the B/H ratio and not the impedance we think of when talking about transmission lines.

>they
>show a VERY abused Cherokee mobile and in the end a Northstar CB

Hmm, Northstar only makes 10 meter rigs. At least they were accurate. Anybody remember the movie 'Citizen's Band?' It only showed Radio Shack gear, Realistic. 'City of Angels' shows a Cobra model used to summon help for the fallen Meg Ryan. Take care and 73.

>Mark, so your saying its ok to break the rules by a few watts and that is
>ok? It's just the guys running Big watts who they should go after?
>

No, I'm saying a guy busted for running 1000 watts on the "freeband" should not receive the same fine as someone running 25 watts on the legal 40. Is that right. no. But it's how I feel, pure and simple. Take care and 73.

>Mark,
>
>You guys know darn well it isn't the "few watts" and "dx on legal 40"
>that I complain about.
>

Then say that!
>And you also know darn well that the FCC doesn't slap $75,000 fines on
>violators of a "few watts" and "dx on legal 40".

True. Actually, they don't slap $75,000 fines on the guts running "obscene"
power level with any regularity either.

>You replace "big watts" with "few watts" and "freeband" with "dx on
>legal 40"....and suddenly your argument looks semi-reasonable

I ran 30 watts for over ten years and I knew other just like me. Is 30 watts
"big watts?" The push for the removal of the 250km limit on the citizen's band
has nothing to do with the "freeband." Why do YOU always seem to drag the
"freeband" into the fray. Hey, this kinda loops back to...

>You guys know darn well it isn't the "few watts" and "dx on legal 40"
>that I complain about.

I guess a "few watts" and "dx on legal 40" isn't sufficient troll material.

>and ole
>Voobner appears like a fanatic

That's your doing, you invented Aaron Voobner.

>Sorry to sink your canoe but that ain't reality, fellas.
>

Yes Aaron, tell us about "reality." Take care and 73.

"Earl Turner" <TurnerDiaries@Pierce.net> wrote in message
news:kwtv7.12069$WX5.306222@e3500-atl2.usenetserver.com...

I was struck by the purpose with which Osama Bin Laden spoke. The lack of fear, the calm, the well reasoned and forceful speech that he gave while sitting on the cold ground in the mountains of Afghanistan with the American and British military poised to strike a hellish blow against himself and his comrades. What a contrast it was to listen to Osama, a man born into great wealth who has forgone it all and lives in poverty using his wealth to fight for justice. Who among us would piss away $300 million and put our lives on the line year after year to make the world a more just place in which to live?

I am not myself a religious person, I don't believe in God, but I do believe in Justice. What Osama spoke of, the reason for this war is something the entire world is aware of. The Israelis are committing genocide in Palestine, a land in which the Jews do not belong. They have stolen the land where they are murdering (Israelis do not "live" they only rape and plunder) children and breeding misery. The Israelis fight like cowards, dressing up in the clothes of Palestinians and planting bombs and poisoning their foes. Israelis call their cowardly, wicked, genocidal behavior "smart". Their treachery is so extreme, so vulgar that young men will strap explosives around their waste and blow themselves to pieces just to wound a few Jews.

If Americans knew of the decades of pain, the systematic torture of small Palestinian children in Israeli jails then they would understand why young men would blow themselves to pieces to wound a few Jews. Of course Americans are not aware of this. After Osama's great speech Tom Brokaw mentioned the reason for the attacks in New York and Washington D.C. as stated by Osama. Osama stated clearly "the attacks on America would continue as long as there were Israelis on Palestinian land". Brokaw then turned the air time over to Andrea Mitchell, a Jewess who fornicates with the Jew Alan Greenspan who heads the Federal Reserve. The Jewess who goes by the name Andrea Mitchell then proceeded to ramble on for several minutes portraying Osama Bin Laden as a militant enemy of "America" and never once mentioned Israel, this after Osama specifically stated that strong support of Israel by America was the sole reason why this attack on America had happened and that the attacks would not stop as long as the genocide of Palestinians by Israelis continued.

It is very simple; do Americans support the systematic torture, the breaking of bones of Palestinian children by the Israelis, the murder of Palestinian leaders and politicians not named Arafat? If Americans will do nothing to stop the flow of over $6 billion every year of their tax money to Israel then the attacks will continue. America may survive in name but as a nation based on the Constitution of the United States of America, that America will never survive such a conflict. All of those values that Americans hold dear will be lost. The soldiers will eventually be in the malls, then the supermarkets. Searches of houses will take place without warrants based on suspicions of an incompetent employee of the FBI who read a post on the internet made by a teenage

prankster and traced it incorrectly. Innocent people will be beaten and killed by these soldiers not fit for police duty. Life in America will become a new hell, a prison where people who do not like one another are forced by the point of a gun to live with one another, work with one another and eat with one another to satisfy the insane needs and desires of a small number of people, less than two percent of the population in America. These people hate everyone who is not one of them. They are the most "ethnocentric", the most racist group of people on planet Earth. They lie as a way of life, whether it be for survival or prosperity. No crime is too great to commit because they claim they were wiped out, removed from the face of the Earth in the 1940's in some event they call the "Holocaust". Despite the fact that they are still here, that they are the richest group of people in America, that they occupy and dominate most positions of influence in American society they still claim that they were destroyed in the 1940's, and that event that they call the "Holocaust" justifies everything and anything they do.

From 1940-1945 fifty-five million people died, but according to the Jews no one should think about anyone dying except "The six million". Why is that? Putting aside the fact that Jews-Rabbis-can only document the death of three and half million Jews during the period of 1940-1945, why should the entire world ignore the death of over 49 million non-Jews? What makes Jews so special?

You would never ask such a question though if you lived in America, not in public anyway. The Jews would brand you as an "anti-Semite". The Jews do not even accept the scientific fact that all Middle Eastern people-such as Palestinians-are "Semitic". No this lie you must accept as well or you are an "anti-Semite". Having been branded an "anti-Semite" you are then cast out by American society, you may as well just leave the country because no matter what your ability you are through. An "anti-Semite" might love the Palestinians, or might marry an Arab (Semite) but the Jews consider him or her an "enemy of the state" if they dare disagree with anything the Jews say in America.

So who runs America? Who decides whom we Americans go to war with? How many Americans are aware that the Fortune 500 defense contractor Northrop is a Jewish enterprise? Did you think that the Jews were just animals who made movies like "Guess Who's Coming to Dinner", "Sayonara" and "Save The Last Dance" (among many others too numerous to mention)? They control the guns as well as the news and entertainment. Jews control Wall Street (that's why the World Trade Center was hit) and if you look closely at Rumsfeld and Casper Weinberger, and former Senator and Secretary of Defense Cohen you can see the Wall Street-Pentagon-Jew connection.

Americans must wake up; Americans must see what is happening and they must fight to take back control of America from the alien element that has hijacked their government. Americans do not have a choice about this because that alien element is committing genocide against people in the Islamic world and people in the middle east cannot just sit still and wonder when Americans will wake up to what is going on and put an end to it. If it were your children being tortured and murdered you would feel the same way.

The hatred by Jews for non-Jews cannot be explained rationally because the Jews are insane, wickedly so. Jews believe themselves to be "human" and all the worlds' people to be "animals", "beasts of the field", "natural slaves" here only to serve the Jews. Even Jews who claim to be "atheist" (why does this not set off alarm bells? How can a "religious" group of people publicly acknowledge atheists among them in good standing?) believe themselves to be better than any non-Jew.

Americans who sit in front of their TV watching nonsense in the form of "sports" and "entertainment" (all produced and influenced by Jews) while stuffing their face with pizza, burritos and other crap will either wake up, shape up, and confront the Jews and what they are doing and put a stop to it or they will lose every part of their "way of life". Everything they do now and everything their parents and grandparents did as they lived their lives will come to an end. The Jews are putting up surveillance cameras everywhere while producing essays and video reports on the "news" telling you that it is for your own good. If you continue to sleep through the bombings-both here and abroad-then you have no one to blame but yourselves.

What could be so bad that people would sacrifice their lives to fly jet planes into buildings? If you don't know the answer to this question then you need to read this post again. Then you need to ACT.

For more on how they control America: http://natvan.com/who-rules-america

719. List of the rec.radio newsgroups

Newsgroup: rec.radio.cb
Date: 2001-10-08 05:31:44 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <9prdo0$c9m$1@news.hawaii.edu>
Source record: 99734
Cross-posted to: rec.radio.amateur.space,rec.radio.broadcasting,rec.radio.cb

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any amateur topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefaced
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Yeah, apparently in the head!! You need to read the REAL Thomas Paine's writings, he would never have been taken in by the crap you forwarded.

Another crackpot from the @home.net crowd. Wonder why all the losers, weirdoes, and crackpots are either at home.net or roadrunner.com.

BTW: posting to alt.fan.britney-spears?? You ARE a loser!!

I'm flattered that you spent the time to dig through my posts looking
for something to discredit me, but maybe you should have read the
complete thread (which continued briefly in a couple other threads
as well). I was baiting Brian into proving his bullshit; which, of

course, he never did. Also, if you read back a bit farther you will come across the coax length threads, where I discuss -- in detail -- all about SWR, including the proper formulae to calculate it.

So was this the damaging info you claimed? Pretty weak, brainfart. Even twistie came up with better stuff than that!

I am saying that if you want to find out about Napster, read it from
their site and get firsthand information. You will see that many
record labels have made agreements with them to make music available
through the Napster service, and all perfectly legal.

If you want to troll this issue further, please do it on another ng.

By the way just for a quick dose of how bad the media is.. the little clip that we seen on tv showing
people dancing passing out candy was from 1991. BBC said that last week where that video actually
came from. Makes you think what the media machine can really do.

In article <fbc7a2.0110061259.1615b4ca@posting.google.com>, voobner@yahoo.com (Aaron H. Voobner) writes:

>All kidding aside, Osama claims to act for the nation of Islam, which

> piracy carries a higher "monetary" penalty than drunk driving, do you actually
> believe it's a more severe offense?
<snip>

Yes I do.

Interference is a problem that will only get worse. RFI from pirates
is already a serious issue, and there is potential for great harm.
Maybe there has already been a major accident because of interference,
or maybe not, but eventually it will happen.

Of course, all RFI is not caused by RF pirates. There are many sources,
such as the ever-increasing numbers of computers (a comprehensive list
can be found at fcc.gov). But as these sources increase, so does the
reliance placed on these machines. Many of them are used in critical
financial and medical systems. And anyone that has had RF appear in
their stereo when the thing isn't even turned on will realize the
potential of damage to these systems.

There is also the interference to communications. There is a huge
infrastructure of communication based on two-way radio. A large part
of that infrastructure is required by the Public Safety Pool -- the
services that provide emergency services to you and your family. And
it doesn't just include the obvious services such as Fire, Police, and
ambulance. It also includes critical federal government frequencies
that may or may not be active, or may simply be monitored. A complete
breakdown of your local PSP can be found through the FCC's site.

Interference is a major problem with unregulated RF power mainly because
it is unregulated. There are no requirements as to engineering specs
or standards, and few pirates have the education, skills, experience,
or equipment needed to transmit a powerful RF signal without interference.
Add to that the illegal nature of RF piracy and the avoidance of any

personal or financial responsibility for their actions, and the problem of interference becomes insignificant to the pirate, but of increasing importance to the victims of the interference.

Aside from RFI, one of the most important tools of any government is the radio broadcast station. Whoever has control of the station is going to broadcast any and all propoganda that will further their cause, just or not. One of the first locations of any coup or military strike is on the devices of public information -- the radio stations. Radio provides the venue to disseminate information that can be helpful or harmful to the public at large. Any tool with that much power MUST be operated with responsibility, NOT by kiddies that just want to play with radios.

Radio is also a necessary component of any military organization, including the US military. Wireless communication is absolutely necessary for the success of any operation, large or small. It is also necessary for any humanitarian efforts. Used properly and responsibly, radio is the most important invention in recent history. But, like any tool, it can be turned to work against the common good. Unrestricted access necessarily means unrestricted use, and unrestricted use means it will be used for criminal purposes.

Nobody is preventing any responsible citizen from operating a clean radio station. There are simple requirements -- pay a couple bucks, take a test to show your proficiency, and you get a license. It's not hard. But the way some of these freebanders cry, whine and complain, one would think the government requires castration! The freedom to use the radio waves is not prevented, but moderately restricted to those that can do it responsibly. And the government requires responsibility because of the potential damage that can happen from misuse of the spectrum.

Radio is a tool that can be used or abused on a very large scale. It can help or hurt people by the thousands, if not millions. Yes, RF piracy is worse than drunk driving.

Some IPSs will keep trying for up to 5 days before bouncing back an
email. Try again then and post the results.

BTW, with winter approaching, how are the pellet-stoves selling? Have
you needed to supplement your income lately by selling RF amps using
your employer's address again?

Aaron I am not one to jump into many of the conversations
etc that you all have. as I do not have the time in my very
busy life as of yet to really express my ideas on here but
I can say without a doubt you are a very determined man.
Granted that is a good thing. Though my friend look in
yourself and see what your missing. I notice you seem
to be angry. What are you angry about? What bothers
you so much that you care so greatly about people
on a newsgroup. This does not only go out to you bro.
This goes out to all those that want to fight about such
things. This may be pushed off as " ole pain " speaking
his mind though I wish it was more of a collective of most
here who do not say much but just watch lots of children
fight over nothing. I ask to all those that post so much
unwanted bashing to email eachother. If you really feel
so concerned have it out in email. When I actually have
time to come and read this newsgroup a small number
write so many posts that I can easily have 400 posts
by the time I actually get to read this. I ask that if it
was at all possible for some of you to take your hate
to email would be most appreciated. As I am basically
Neutral on this board I would hope that my humble
offer of a simple solution would suffice. I know a few
may think they are untouchable. I thought that in my
exploits as a geek with a mission with skillz that far
exceed many still was put thru the ringer as it all catches
upto you. Though you may not get your home broken into,
your equipment taken and lose your freedom for years
you can not truely hide from those that actually know
how it all works. Being Invincible and feeling depends
if a small number who would actually care to burst your
bubble take the time to do so. Take it light.

Your Pain

P.S. Phil Thanks for the software so long ago bro. I should have
drives back hopefully in less than a year. I can not wait to enjoy
it again. By the way Happy Birthday , Merry Christmas and all
that jazz that I was not able to be around to say. Have a good
one.

I have no idea who that Gentleman really was but a portion of what he says is cleary true. Before you try and say I am anti jew .. sir my heritage would specify
otherwise. As I was born of jewish blood and do not hate those of jewish decent
or religous beliefs. I shall say this.A large portion of corps are Primarly controlled
by jews. I am not into all the Propaganda aspects as there is no " all jews think
as one " That would not be true. To say Jews are destroying this world. I would

say we all are. All of us have a hand in making things worse. Has nothing todo religon or race. What is right is right what is wrong is wrong. Though so many people have no honor. The almighty dollar runs there life. When ever a certain structure in society is analized those at the top are attacked becouse they must
be evil for being at the top and so many being at the bottom. The IBM corporation
one of the largest companies in the world is still to this day disliked by so many.
Jealousy is a bitch I guess. Jews are the Richest part of the US society by far.
Something must be fishy about that I guess. Microsoft is a huge software company
they uses tactics everyone else wish they could use but do not have the leverage to
do so do they whine and complain. It is only unfair if others can not do it. Typical
Buisness ideals apply aswell. If you do not think so then some of you are nieve to think the world is fair. On a note about bin laden well he is basically insane.
He is far from being rational. Our decesions came back to bite us on the ass. Isreal does do terrorist attacks. What we will do about that will be the large movement towards what happens in our country in the future. Bin Laden sees himself as a freedom fighter. Thing is He does not support what we call freedom.
He just does not want to walk down the same street as a jew. The " 6 million jews killed " is actually a false number. If you think jews cant lie lol you do not know
jews. Anyone can lie . Religon does not change that. Though my grandmother told me stories and she even said the numbers were greatly overdone. She coming from the warstriken part of poland just along the russian border She was lucky to be far enuff north of all the Concetration Camps that she was not killed. She said many were killed in the but she also stated that the numbers

were grossly overstated. Even so all 6 Concentration camps were located in Poland. Belzec, Sobibor, Chelmno, Majdanek and Auschwitz-Birkenau and Treblinka .So coming at me with a rebutle about me hating jews pfft take tha elsewhere.

Hi Frank,

While I find your post technically correct, the last sentence just makes everything before it too extreme. I happen to think there is a spot somewhere in the middle where "Kilowatt Charlie" get's clobbered and the folks running 25 watts on the legal 40 and/or working DX get a slap on the wrist and guided toward AR. I don't equate the two, just MHO.

Are you in the Issaquah area? I'm in Bellevue every few years or so, my uncle's a retired Boeing engineer. Perhaps one day we can grab a cold one and some clams on the half-shell down by the ferry? I'll introduce you to the family. I'll probably be back in Seattle year after next. Take it easy.

You are joking, right? Oscummy bin Laden spoke out not only at the Jewish, but the Christians as well and ALL Americans be they religious or not. I'm not Jewish, but know a few and they are nothing of the monster or trash you speak of. They are decent hard working people. Certainly not rich by any means. Actually, fighting for survival like most in this country now days, Jewish or not. I hope for your sake, you aren't a follower of Oscummy or a believer of his sick philosophies. IF Oscummy knocked on your door right how, whether you love or hate the Jews, because you are most likely anything other than what he wants to see, you my fellow Earth Creature are as dead in his eyes as I am. So, to stick up for him isn't going to win you any BROWN NOSE points. What are you going to do, disown America to save your ass? OR maybe you are one of his people under an assumed name that is on the FBI's list! Curious as to which it is?

Web sites don't mean dick to me. Any one can make one to suit their own cause be it right or wrong. You are entitled to your views and opinions. So too am I. Sad to say, I strongly disagree with yours(?) or let's say Oscummys, as I'm sure many others do as well. Oscummy is a very sick person. One can only hope, that he is sent to hell to be with his master. He was tossed out of his country and his money on his scummy ass because of his beliefs. His own brother here in America has publicly disclaimed him. His family in Saudi Arabia has publicly disowned him. Even the Muslims are starting to fight back to tell the "real" story. This asshole isn't "Muslim". He is blaspheming the Muslim religion to suit his own cause. Just like some of our own so called ministers and priests do wrong in the name of religion. THAT IS NOT RELIGION. I'm not a deeply religious person, but I DO believe in God and Jesus Christ. It is those who do evil in the name of religion that make me wonder AND sick. When God and/or Christ himself stand before me, then and only then will I change my ways. I will have good reason to. THEY are the ONLY ones I will bow to. Oscummy is NOT Justice. He is a MURDERER. He is another Hitler wanna be. It's either his way or no way. FUCK HIM. Him and Saddam ought to be tied together in a 69 and have a spear put through them to send them to eternity together.

JUSTICE???????? Justice will be when him and the rest of the cancer cells like him are given a shot to be eliminated like the disease they are. As for the Jewish-Palestinian problem, that has been going on for many many years. Long before either of us and that scummy bastard were twinkles in our mothers and fathers eyes. With or without intervention of the US, that may never be resolved. It hasn't been all these years even before the US was the US. Why now? AND Mr. Wonderful is now here to save the day? Sorry, I don't think so..... He is nothing short of a sick murderer. He and his followers will get exactly what they have asked for. And it won't be soon enough.

Did he honestly think we would sit back and allow this to happen and not pay for it? The Taliban even told their people, don't leave - the US won't come in. OH? We were telling them we were coming. We were knocking on their front and back door for crying out loud. They didn't answer, so we just opened up and walked in..... Boy, whatever it is they were smoking, drinking or taking was pretty good stuff to not have fear of retaliation which was imminent after 9/11. Better than any Prozac on our markets. He was very sadly mistaken to think we would allow this to go unchallenged. Others - bigger and better equipped tried and failed, who is this piss ant to think he is any better?

I don't want to see "innocent" people get hurt or killed. Unfortunately some most likely will and my heart goes out to them and their families. But as for Oscummy and his followers, nothing short of death is good enough for them. It's kind of funny, you almost make him out to be Jesus Christ or a Saint. OOPS! Jesus was a Jew..... A Saint is one who has done "good". Don't want to offend you. And certainly don't want to falsely elevate him and the likes of him to a standard they'll never be deserving of.

WOW! IF HE is Justice, we're ALL in trouble. The whole world better get down and pray to All scummy bin laden and ask for forgiveness.
NOT!!!!!!!!!!!!!!!!!!!!!

So tell me, when the others tried to take control like Hitler, what religion did he claim to represent? How about the Japanese? The Koreans? The Communists? SAD DAM? I'd be willing to bet not all of the same! Religion, I think, is being USED to further the gains.
It is the easiest ticket to use to suck people in. People looking for something to believe in. Someone to calm their fears and to instill a sense of "control" in an otherwise tumultuous life, a life filled of struggle. In all actuality, religion has nothing to do with it.
"IF" religion does have anything to do with it, they are getting away with it only under the guise of a false prophet or Anti Christ. Not all of the former wars were fought based on the Jewish either. So, I don't want to hear that Bullshit.

Hell, Jim Jones - remember him? He did the same thing... He suckered hundreds to their deaths too. Bled them dry financially first, then killed them all. ALL IN THE NAME OF RELIGION. Justice???? GIVE ME A BREAK! Religion? This has NOTHING, ZIP, NADDA to do with "religion". This is just another sick bastard that needs eliminated so the rest of us can live in peace.

So, Millions are supposed to bow to him and a few thousand followers? Nah, don't think so. I think they ought to loosen the towel from their head, let the blood circulate a little and while the towel is off, take a bath and use it to dry off with. With that towel wrapped so tight, they had to have a numb brain to think we would allow the attack to go unanswered.

JUSTICE???? IT will prevail, but not by the hand or name of OSCUMMY or anyone like him. It will be by the people of the world who choose to live free of him and those like him if by human intervention. Or God or Christ themselves by holy intervention.

Ok, so I've spoke my piece, what are they - his followers going to do, kill me? I can only die once. Chances are, I'll get to heaven far quicker than they will. Truthfully, I DOUBT they ever see the place. Least I hope not. Talk about a holy war, the heavens would be rumbling for sure..... My greatest sin is the use of my language and detesting those who kill innocent people on purpose. Surely, I can be forgiven for that so as not to be burning in Hell with Oscummy and company.

From one who is sick of the sickos.

Over here we do, and we also have a good deal of good old fashion peer pressure by other Hams to get the problem operators to clean up their act. If they don't they reported to the FCC. I see nor reason why the same can't be done on 11m. I don't expect the problems to disappear completely, however they can be reduced considerably. As a start the open buying and selling of illegal equipment needs to be stamped out. Going after a few hundred illegal amplifier manufactures and export radio dealers selling to the 11m market is a far smaller enforcement problem that is doable.

Hey Landshark, I saw one of them Buell Lightnings up close yesterday at the docks while playing around on 27.555 yesterday. Not a bad looking bike compared to the rest of the crotch rockets.
555 was rockin' all day, so was 38 low. It would appear we have some of our resident no codes making another appearance on the freeband. And they think we don't know...heheheh! Later!

Yup, I just got me another bite on my trolling line!

Painkiller, you again get a misfire when you try to analyze
Anti-Keyclown motivations.
None of us are angry. We just like making you fools write posts like
the one I am responding to. Hey, continue on with your misconception,
though. Just like the keyclowns you are, you guys will continue to not
get it.
Anti-Keyclowns don't "care" just like you don't "care" about the fact
that you are criminals. You got your fun and Anti-Keyclowns have
theirs.
Look at all the threats and cursing you key-sissies do. Twithed went
on and on with the "1mangayboy" theme for months, Chuckie threatened
N8 with shooting and raping his family, etc, etc.
All that caused was that now you key-sissies are a great source of
fun. Anti-Keyclowns start a song, and you KeyQueens dance to it. You
KeyQueens are owned.
Your thuggish responses and fat mouthed blathering about how "nothing
will happen" were correct. NOTHING has happened in spite of your
threats to do this at Dayton, Do that at N8's house, "adjust his
attitude", "Get" Voobner, etc, etc, etc. Why not? Because you are all
a bunch of little sissies that talk trash but don't have the balls to
do anything. Period.
How many times has N8 told these threateners to come over? Every time.
How many times have one of you KeyQueens showed up? NONE!

Sissies, all of ya. Limp chimps in a federal criminal monkey house.

I am done telling you the absolute truth for one day. Seeya when I
need a few more laughs.

Source record: 99764

Lelnad scribbled:
Subject: what?
Twistedhed@webtv.net is no more. Sissyboy got his butt spanked by his ISP. There may be another incarnation of this maggot, but it won't be on webtv.net.
--
Copy of letter Lelnad wrote:

To whom it may concern,

Enclosed is a copy of my first complaint against a webtv user back in May and the
response I received. This user is at it again. He has taken aim at me again and I have good reason to believe he is interfacing my mainframe by access of webtv via another computer. This user is intentionally annoying
and disruptive on usenet and many have complained concerning his behavior. He has incorrectly accused me of forging his username in public. It appeared you took action as emails to him bounce but he is still able to access usenet. Please look into this and take appropriate action against this rogue operator.

--

Hahahahah! I told you to get a webtv unit. That POS you use is useless. Your anger and drag as dweebo and howling for me is plenty funny entertainment, though. What I really want to know, is why did you not answer me when I called you yesterday? I know you heard me because you acknowledged until you heard me say "Twisted",...LMAO. I thought you popped a cork right there. Are you always on the freeband, Lelnad? Catch you on 555 later on, and you may use any name or handle you wish. Someday I may reveal to you how I know so much, such as you being dweebo, cursing and jamming 27.555, the linear in your car (you DON'T have a truck, it's a car) and your anger control and blood pressure problems. You ought to find another hobby besides radio. You're not to good at it and the stress is killing you inside. Try crochet, you're home enough, and if you get good enough, I may critique your work. Since you are on a name calling binge, I like Mopar's name for you, think I'll stick with it..Lelnad the coicle, er, circle jerk. And stop jumping up and down all week...we see you, you're just being ignored. :)"

Yup, I just got me another bite on my trolling line!

It is hard to take serious anyone who misspells common words, uses
"there" in place of "their", uses such poor sentence structure,
capitalization and punctuation. Did you ever attend English
classes or did you just skip those as well?

Oh I remember that exchange. Seems like somebody took exception to my
tag line
<excuse snipped>

 Of course Twisted you just "conveniently" left that part out.

"My, my, CJ lelnad, you have been a busy boy this weekend. Up all night
last night and you;re supposed to be at work today. Anyway, I didn't
"conveniently" leave out anything. It was intentional. It doesn't
apply."

You really should publish the whole thing.

"As should you, when posting an old post, pathetically failing at an
attempt to misattribute it to me. Don't like the rules? Take the proper
avenue and get them changed."

Did you know that tag line got published in a Local Radio Club's news
letter too?

"Wow. I'm impressed <g>. That's probably where you plagiarized it for
your own use. Guess that qualifies you as a journalist <GG>. I will
refrain from passing judgement on the publication, despite what you put
forth."

I'll bet you missed that one. Check page 3 out. 8-))

"What is the publication?"

http://scarc.com/keyed_up/kdup0200.pdf

"Just tell me the name of the publication, since you really want me to see it, as if that somehow will make you accepted. It is obviously something you're proud enough of to blow your own horn about. The link is insignificant. What's the name?"

By the way how that's "jock strap" collection doing? Are you going to let the little boy dress up like those "saucer men" you talk to, and wear the jock strap for Holloween this year?

Clearly you haven't a clue about Thomas Paine, so the rest of your posting isn't worth dignifying with a response. I just have an offer. Since scumbags like Osama bin Laden see a quick trip to Paradise if they should die in their terrorist actions, send them over. I'll be happy to help them on their "magic carpet ride" to Paradise. Just give me a couple of days notice so I can stock up on Black Talon and Hydro-Shok loads. Then line 'em up to be waxed!

Come on Frank,

We may have our differences of opinions, but there's no call to get
nasty. I saw that scene too and if you see something in a movie that
is related to your hobby, you'll recognize it without much effort.
Heck, in "Greased Lightning," I even remember recognizing the Turner
desk mic used at the Virginia speedway by the race announcer when
Wendell Scott (Played by Richard Pryor.) won his first race. I never
saw "Citizen's Band" though. Take it easy.

765. Re: lelnad chokes on crow (once again) and cries to ISP...incorrectly

Newsgroup: rec.radio.cb
Date: 2001-10-08 18:26:30 UTC
From: twistedhed@webtv.net
Message-ID: <17025-3BC1EFD6-120@storefull-123.iap.bryant.webtv.net>
Source record: 99778

From: timnebo@aol.comLOL (Tim)
thanks frank, i did get a reply from him and it seems it was all fake as he is still very much a web tv customer.

"Yea. And CJ Lelnad is over there scratching his empty head trying to figure out who the hell hacked him from a webtv account..he was so certain it was me. And he calls himself a computer engineer...
Just another of his erroneous, flacid contributions to rec.radio.cb. If he would spend as much time on the subject of cb as he does worshiping me, some may even reply to him. Since he fails to mention what's really bothering him, I'll take the initiative..after all, he once again started this dialogue. He's beside himself with the stupid statements he makes that I use as a sig. You should have seen the argument he put forth about how it SHOULD be a TOS violation because "if one may do a search on me, it may cause some confusion as to who is who." Oh, the ego on that boy. (SNICKER) Go ahead lelnad, post the replies you received along with your many complaint letters. You can't buy entertainment this good. Just like his ideas how only HIS interpretation of the rules should be folllowed. Comparisons to criminals, terrorists, child molesters, etc...all this vile venom because of his lack of control and impulsive behavior. Same old CJ lelnad. Goes right back to him and Sparky asking for followers to start another cb room. They can't stand not being in control, Tim. Note how CJ lelnad has been saying how he is in control, as dweebo, and owns the group. It's all about control. And to take back a word that I used to describe him long ago that he so originally hurls back at me, I would say my presence alone shows just who is truly "impotent"..(chuckle chuckle giggle giggle nyuk nyuk nyuk)
They try too hard. Can't control the speech so they tried to rewrite the FAQ rules. Failing at that, they attempt to impose their own standards (double) of morality with ISP's. Meeting with familiar failure repeatedly, they are caught in a coicle, er, circle, sort of like a DOG chasing it's own tail. Met with constant failure, the name calling, obscenities and vulgarities spew from each of them. They then start over with the attempted speech control.
All things considered, I was wrong about one thing...CJ Lelnad IS on cb....all over the freeband. He has garnered about as much popularity there as he has among this crowd. He disappeared awful fast when he was identified, though."

and as far as pellet stoves goes, what the hell are those? down here the majority sold are all prefab inserts whether it be wood burning or gas fireplaces but thats just what i hear. do you need to buy a amp?

"If he did he can only use it in his 4 banger, as he has no base antenna. So it would have to be a small one."

although i'm no dealer i do have a few i might could sell. of course these are sold as is because i have no way of testing them other into a dummy load because you know me i'd never do anything illegal.

"Sparky doesn't want to talk on the radio anyway. He just wants to be noticed and pet on the head a few times."

> I'm also one of the few who will tell you that a 2510 will get just as
>loud as any radio out there if done right.

<snip>

I have owned both types ofradios, recently owned a HR2510 (which was stolen last October) and presently use an Emperor 5010 and I have had the other locals that I talk to regularly tell me that they cant hear anything different between the two radios. both were "tweaked and peaked" by techs so if its done right, by someone who knows what the hell hes doing, an Emperor CAN sound just as good as the 2510 and vice versa.

Beware, for I have come and the Earth shall be Mine!

Twistie, Perhaps you can show a copy of the e mail you got back from @home when you complained to them about me. I didn't hear you or leland out there this weekend what are your numbers? and what are Lee's Ill have to listen up for you.

"Twistedhed" <twistedhed@webtv.net> wrote in message news:7378-3BC1B4D0-101@storefull-125.iap.bryant.webtv.net...
Lelnad scribbled:
Subject: what?
Twistedhed@webtv.net is no more. Sissyboy got his butt spanked by his ISP. There may be another incarnation of this maggot, but it won't be on webtv.net.
--
Copy of letter Lelnad wrote:

To whom it may concern,

Enclosed is a copy of my first complaint against a webtv user back in May and the
response I received. This user is at it again. He has taken aim at me again and I have good reason to believe he is interfacing my mainframe by access of webtv via another computer. This user is intentionally annoying
and disruptive on usenet and many have complained concerning his behavior. He has incorrectly accused me of forging his username in public. It appeared you took action as emails to him bounce but he is still able to access usenet. Please look into this and take appropriate action against this rogue operator.

--

Hahahahah! I told you to get a webtv unit. That POS you use is useless. Your anger and drag as dweebo and howling for me is plenty funny entertainment, though. What I really want to know, is why did you not answer me when I called you yesterday? I know you heard me because you acknowledged until you heard me say "Twisted",...LMAO. I thought you popped a cork right there. Are you always on the freeband, Lelnad? Catch you on 555 later on, and you may use any name or handle you wish. Someday I may reveal to you how I know so much, such as you being dweebo, cursing and jamming 27.555, the linear in your car (you DON'T have a truck, it's a car) and your anger control and blood pressure problems. You ought to find another hobby besides radio. You're not to good at it and the stress is killing you inside. Try crochet, you're home enough, and if you get good enough, I may critique your work. Since you are on a name calling binge, I like Mopar's name for you, think I'll stick with it..Lelnad the coicle, er, circle jerk. And stop jumping up

and down all week...we see you, you're just being ignored. :)"

Yup, I just got me another bite on my trolling line!

No Fear hid and cried behind google with: Straw man argument.

"So what? You are a straw man."

"Earl Turner" <TurnerDiaries@Pierce.net> wrote in message
news:kwtv7.12069$WX5.306222@e3500-atl2.usenetserver.com...
I was struck by the purpose with which Osama Bin Laden spoke. The lack
of fear, the calm, the well reasoned and forceful speech that he gave
while sitting on the cold ground in the mountains of Afghanistan with
the American and British military poised to strike a hellish blow
against himself and his comrades. What a contrast it was to listen to
Osama, a man born into great wealth who has forgone it all and lives in
poverty using his wealth to fight for justice. Who among us would piss
away $300 million and put our lives on the line year after year to make
the world a more just place in which to live?

"By killing innocent Americans? BS."

I am not myself a religious person, I don't believe in God

"Nuff said..that explains it all."

, but I do believe in Justice. What Osama spoke of, the reason for this
war is something the entire world is aware of. The Israelis are
committing genocide in Palestine,

"As are the Muslims in Indonesia (and other locales), the largest
population of Muslims in the world, and on a much grander scale. Point?"

a land in which the Jews do not belong.

"Many christians believe it is the Muslims that do not belong."

They have stolen the land where they are murdering

"Wrong. Abraham had two sons. One "stole" the other's birthright
(Israel) by pretending to be his brother while Abraham was blinded and
on his death bed. But how can you even touch on this if you don't
believe in God? This is what makes me think it's a troll."

(Israelis do not "live" they only rape and plunder) children and
breeding misery.

"The Muslim culture treatment of women in the middle east is well
documented."

The Israelis fight like cowards, dressing up in the clothes of
Palestinians and planting bombs and poisoning their foes. Israelis call
their cowardly, wicked, genocidal behavior "smart".

"And the old world, hardline Muslims call their cowardly attacks on unarmed American civilians "Heroic." How disturbed must one be to kill in the name of God?"

Their treachery is so extreme, so vulgar that young men will strap explosives around their waste and blow themselves to pieces just to wound a few Jews.

"Yea. That treachery is so extreme..not like actually killing one's self by crashing an airplane and killing thousands, huh?"

If Americans knew of the decades of pain, the systematic torture of small Palestinian children in Israeli jails then they would understand why young men would blow themselves to pieces to wound a few Jews. Of course Americans are not aware of this.

"Of course, we must also not be aware how the Taliban and followers treat their women like animals."

After Osama's great speech Tom Brokaw mentioned the reason for the attacks in New York and Washington D.C. as stated by Osama. Osama stated clearly "the attacks on America would continue as long as there were Israelis on Palestinian land"

"Not if we kill them all first."

Brokaw then turned the air time over to Andrea Mitchell, a Jewess who fornicates with the Jew Alan Greenspan who heads the Federal Reserve.

"You are probably of the ilk who focused on Clinton's sex life so much that national security suffered. Worry about the president getting a blow job in an attempted effort to discredit him, at any cost. China had spies here that were discovered....BUT...Clinton had a sexual liason with an intern, so that takes priority in your dumbed down version of what necessitates attention."

The Jewess who goes by the name Andrea Mitchell then proceeded to ramble on for several minutes portraying Osama Bin Laden as a militant enemy of America" and never once mentioned Israel,

"Why should they? Israel didn't attack us."

this after Osama specifically stated

"Well, THAT certainly ascertains credibility."

that strong support of Israel by America was the sole reason why this attack on America had happened and that the attacks would not stop as long as the genocide of Palestinians by Israelis continued.

"Never happen. We're cleaning house, er, sand over there this time. Dubya has quite a little temper, sort of like one of our own little circle jerks in rec.radio.cb, only the bushman is infinitely wiser."

It is very simple;

"Actually, it isn't."

do Americans support the systematic torture, the breaking of bones of Palestinian children by the Israelis, the murder of Palestinian leaders and politicians not named Arafat? If Americans will do nothing to stop the flow of over $6 billion every year of their tax money to Israel then the attacks will continue.

"Atrocities take place in all countries, including our own. To attempt the "Any friend of my enemy is my enemy" is not even applicable in this situation."

America may survive in name but as a nation based on the Constitution of the United States of America, that America will never survive such a conflict.

"One has nothing to do with the other in your example."

All of those values that Americans hold dear will be lost. The soldiers will eventually be in the malls, then the supermarkets.

"This too, will come to pass, as soon as we weed out the ones that are already here and stop rubberstamping visas and green cards with callous disregard."

Searches of houses will take place without warrants

"It happens now."

based on suspicions of an incompetent employee of the FBI who read a post on the internet made by a teenage prankster and traced it incorrectly.

"Ask Lelnad C. Scott about that. He knows all about that stuff. He claims to have an inside line on the FBI, as a close friend of his is employed by the FBI as an investigator, as he likes to say. He apparently thinks like you and is as paranoid as you, as he has told myself, and Mopar, that our posts on rec.radio.cb are being watched by the Feds. He also claimed Bin Laden is on the freeband channels communicating with his Jihad soldiers. All this time I thought he was full of it."

Innocent people will be beaten and killed

Happens now, has always happened, and will continue to happen. Again, it has nothing to do with your point, if you have one."

by these soldiers not fit for police duty. Life in America will become a new hell,

"Afraid not. Life will continue to improve in America, as we have always done."

a prison where people who do not like one another are forced by the point of a gun to live with one another, work with one another and eat with one another to satisfy the insane needs and desires of a small

number of people, less than two percent of the population in America. These people hate everyone who is not one of them. They are the most "ethnocentric", the most racist group of people on planet Earth.

"We are one of, if not the most diverse country in the world. Hate and racism is taught, not a biological evolutionary trait. Conflict and race is not inherent."

They

"Which "they" are you referring to now?"

lie as a way of life, whether it be for survival or prosperity. No crime is too great to commit because they claim they were wiped out, removed from the face of the Earth in the 1940's in some event they call the "Holocaust".

"Oh, I see, you are back on your anti-semite rant."

Despite the fact that they are still here,
that they are the richest group of people in America, that they occupy and dominate most positions of influence in American society they still claim that they were destroyed in the 1940's, and that event that they call the "Holocaust" justifies everything and anything they do.
From 1940-1945 fifty-five million people died, but according to the Jews no one should think about anyone dying except "The six million". Why is that? Putting aside the fact that Jews-Rabbis-can only document the death of three and half million Jews during the period of 1940-1945, why should the entire world ignore the death of over 49 million non-Jews? What makes Jews so special?
You would never ask such a question though if you lived in America, not in public anyway. The Jews would brand you as an "anti-Semite".

"I'm not Jewish and I still say you are an anti-semite."

The Jews do not even accept the scientific fact that all Middle Eastern people-such as Palestinians-are "Semitic". No this lie you must accept as well or you are an "anti-Semite". Having been branded an "anti-Semite" you are then cast out by American society, you may as well just leave the country because no matter what your ability you are through. An "anti-Semite" might love the Palestinians, or might marry an Arab (Semite) but the Jews consider him or her an "enemy of the state" if they dare disagree with anything the Jews say in America. So who runs America?

"Why, Alan Greenspan, of course. <g>"

Who decides whom we Americans go to war with? How many Americans are aware that the Fortune 500 defense contractor Northrop is a Jewish enterprise? Did you think that the Jews were just animals who made movies like "Guess Who's Coming to Dinner", "Sayonara" and "Save The Last Dance" (among many others too numerous to mention)?

"You watch way too much TV, but I think I told you that once before."

They control the guns as well as the news and entertainment. Jews control Wall Street (that's why the World Trade Center was hit) and if you look closely at Rumsfeld and Casper Weinberger, and former Senator and Secretary of Defense Cohen you can see the Wall Street-Pentagon-Jew connection.
Americans must wake up; Americans must see what is happening and they must fight to take back control of America from the alien element that has hijacked their government.

"Sure we must. After all, no one is dying to get here. It's not like we are the richest country on Earth or anything. Yea, we sure have it tough."

Americans do not have a choice about this

"Sure we do. Email me and I''ll educate you on how the electoral process functions as well as how congress and the rest get elected, not appointed."

because that alien element is committing genocide against people in the Islamic world and people in the middle east cannot just sit still and wonder when Americans will wake up to what is going on and put an end to it. If it were your children being tortured and murdered you would feel the same way.

"Wrong. If it were my family that lived among the heathen Arabs and their disgrace, I would spend my entire life attempting to move to a better place, even if it meant losing my own life in the process or taking several generations to actually succeed in abscounding."

The hatred by Jews for non-Jews cannot be explained rationally because the Jews are insane, wickedly so.

"I notice it's usually the poor bastards that don't actually like to work for a living that dis the Jews all the time."

Jews believe themselves to be "human" and all the worlds' people to be "animals", "beasts of the field", "natural slaves" here only to serve the Jews.

"Now where did you get that? Nothing the Jews believe can hold a candle to what actually is said in the Koran."

Even Jews who claim to be "atheist" (why does this not set off alarm bells? How can a "religious" group of people publicly acknowledge atheists among them in good standing?

"It's called tolerance, something you apparently were never taught as a youngster."

) believe themselves to be better than any non-Jew.
Americans who sit in front of their TV watching nonsense in the form of "sports" and "entertainment" (all produced and influenced by Jews) while stuffing their face with pizza, burritos and other crap will either wake up, shape up, and confront the Jews and what they are doing and put a

stop to it or they will lose every part of their "way of life".

"I disagree. We will never lose heart, something you definitely do not possess."

Everything they do now and everything their parents and grandparents did as they lived their lives will come to an end. The Jews are putting up surveillance cameras everywhere while producing essays and video reports on the "news" telling you that it is for your own good. If you continue to sleep through the bombings-both here and abroad-then you have no one to blame but yourselves.

"Um, no. We blame those who dare attack our great country."

What could be so bad that people would sacrifice their lives to fly jet planes into buildings?

"Ignorance. People that need told what to do. People that have no education other than what some sand desperado tells them. People that are no better than animals. People that can't think for themselves. People that have no regard for human life. The list is endless."

If you don't know the answer to this question then you need to read this post again. Then you need to ACT.

"Apparently, you need to convert to the Jewish religion, then you may not feel so inferior."

For more on how they control America

"Pay attention to public radio."

Yup, I just got me another bite on my trolling line!

Pain, no offense, but I must say, you are a nut. I just read your
response and agreement to that Thomas Paine thing where the guy blamed
Jews for the world's ills and praised Bin Laden. You really are one
confused fellow. Take this post for example. You start out like the
Dalai Lama lecturing about anger....

> Granted that is a good thing. Though my friend look in
> yourself and see what your missing. I notice you seem
> to be angry. What are you angry about? What bothers

"Neutral"? You're "neutral"? With regards to what? Heroin use?

Now there's this...

> I know a few
> may think they are untouchable. I thought that in my
> exploits as a geek with a mission with skillz that far
> exceed many still was put thru the ringer as it all catches

> upto you.

What the HELL does that mean? It makes no sense. What are you trying to say?

> Though you may not get your home broken into,
> your equipment taken and lose your freedom for years
> you can not truely hide from those that actually know
> how it all works.

Huh? Is that a threat? It sounds like one, but again, it makes no sense. Who is going to break into our home? Who can't we hide from? Who "actually knows how it all works"? (Are you drunk when you write this stuff?)

> Being Invincible and feeling depends
> if a small number who would actually care to burst your
> bubble take the time to do so.

Now I KNOW you must be drunk or high. WHAT 'small number' is going to burst WHOSE bubble? What the hell are you talking about? You start off lecturing about how anger is bad and by the end of the paragraph you are threatening someone with something.

> Take it light.

Yeah, stay off the pipe, dude.

-Aaron-

Funny you should mention that. I went to a place called The Brooklyn in Seattle proper and they served the most wondeful oysters. Of course there's always the fast food joint that's all about the area, Oyster King, House, Hut, or something or other. I don't remember the exact name but the motif was blue. If you're in the area too, the invitation certainly goes out to you as well. Take it easy.

>Anyway, I didn't
>"conveniently" leave out anything. It was intentional.

I'm sure it was. The part you left out nullifies the effect. Of course you do that routinely anyway, i.e. take things out of context, in order to distort the meaning when seen out of context. Normal Twisted creative editing at work.

>"As should you, when posting an old post, pathetically failing at an
>attempt to misattribute it to me. Don't like the rules? Take the proper
>avenue and get them changed."

Since you forge so many posts the safe bet is to attribute the posts to you.

>"Wow. I'm impressed <g>. That's probably where you plagiarized it for
>your own use.

Well Twisted just another lie on your part. You should have down loaded and read it before making your comment. You look rather dumb at the moment. You would see the tag line is properly atributed to me. Of course you know anything about proper quoting in news posts nor taking credit for the ones you forge as well.

So how is the jock strap collection coming? You stated before how you like getting mail from Douge and worship the jock straps he sends you by placing them on the wall where you honor them daily. I'll bet you talk to those "saucer men" without a CB, what do you use, your Start Trek communicator? Remember don't let your boys wear any of the dirty jock straps they get for Holloween treats, you want first carck at that I'll bet.

Although I know this is gonna be a real argument over this, I would ask this question: what happened in 1967 that might explain what is going on today? Oh - you may not have been born then. No excuse, go look it up.

Jim in Rochester, N.Y.

p.s. I am not Jewish, but would also ask what happened in WWII to the Jewish people? I rather suspect they are simply looking after their own survival. I am certain they would much rather live in peace, but that seems to be difficult to obtain.

No Fear hid and cried behind google with: Straw man argument.

"So what? You are a straw man."

"Earl Turner" <TurnerDiaries@Pierce.net> wrote in message news:kwtv7.12069$WX5.306222@e3500-atl2.usenetserver.com...
I was struck by the purpose with which Osama Bin Laden spoke. The lack of fear, the calm, the well reasoned and forceful speech that he gave while sitting on the cold ground in the mountains of Afghanistan with the American and British military poised to strike a hellish blow against himself and his comrades. What a contrast it was to listen to Osama, a man born into great wealth who has forgone it all and lives in poverty using his wealth to fight for justice. Who among us would piss away $300 million and put our lives on the line year after year to make the world a more just place in which to live?

"By killing innocent Americans? BS."

I am not myself a religious person, I don't believe in God

"Nuff said..that explains it all."

, but I do believe in Justice. What Osama spoke of, the reason for this war is something the entire world is aware of. The Israelis are committing genocide in Palestine,

"As are the Muslims in Indonesia (and other locales), the largest population of Muslims in the world, and on a much grander scale. Point?"

a land in which the Jews do not belong.

"Many christians believe it is the Muslims that do not belong."

They have stolen the land where they are murdering

"Wrong. Abraham had two sons. One "stole" the other's birthright (Israel) by pretending to be his brother while Abraham was blinded and on his death bed. But how can you even touch on this if you don't believe in God? This is what makes me think it's a troll."

(Israelis do not "live" they only rape and plunder) children and breeding misery.

"The Muslim culture treatment of women in the middle east is well documented."

The Israelis fight like cowards, dressing up in the clothes of Palestinians and planting bombs and poisoning their foes. Israelis call their cowardly, wicked, genocidal behavior "smart".

"And the old world, hardline Muslims call their cowardly attacks on unarmed American civilians "Heroic." How disturbed must one be to kill in the name of God?"

Their treachery is so extreme, so vulgar that young men will strap explosives around their waste and blow themselves to pieces just to wound a few Jews.

"Yea. That treachery is so extreme..not like actually killing one's self by crashing an airplane and killing thousands, huh?"

If Americans knew of the decades of pain, the systematic torture of small Palestinian children in Israeli jails then they would understand why young men would blow themselves to pieces to wound a few Jews. Of course Americans are not aware of this.

"Of course, we must also not be aware how the Taliban and followers treat their women like animals."

After Osama's great speech Tom Brokaw mentioned the reason for the attacks in New York and Washington D.C. as stated by Osama. Osama stated clearly "the attacks on America would continue as long as there were Israelis on Palestinian land"

"Not if we kill them all first."

Brokaw then turned the air time over to Andrea Mitchell, a Jewess who fornicates with the Jew Alan Greenspan who heads the Federal Reserve.

"You are probably of the ilk who focused on Clinton's sex life so much that national security suffered. Worry about the president getting a blow job in an attempted effort to discredit him, at any cost. China had spies here that were discovered....BUT...Clinton had a sexual liason with an intern, so that takes priority in your dumbed down version of what necessitates attention."

The Jewess who goes by the name Andrea Mitchell then proceeded to ramble on for several minutes portraying Osama Bin Laden as a militant enemy of America" and never once mentioned Israel,

"Why should they? Israel didn't attack us."

this after Osama specifically stated

"Well, THAT certainly ascertains credibility."

that strong support of Israel by America was the sole reason why this attack on America had happened and that the attacks would not stop as long as the genocide of Palestinians by Israelis continued.

"Never happen. We're cleaning house, er, sand over there this time. Dubya has quite a little temper, sort of like one of our own little circle jerks in rec.radio.cb, only the bushman is infinitely wiser."

It is very simple;

"Actually, it isn't."

do Americans support the systematic torture, the breaking of bones of Palestinian children by the Israelis, the murder of Palestinian leaders and politicians not named Arafat? If Americans will do nothing to stop the flow of over $6 billion every year of their tax money to Israel then the attacks will continue.

"Atrocities take place in all countries, including our own. To attempt the "Any friend of my enemy is my enemy" is not even applicable in this situation."

America may survive in name but as a nation based on the Constitution of the United States of America, that America will never survive such a conflict.

"One has nothing to do with the other in your example."

All of those values that Americans hold dear will be lost. The soldiers will eventually be in the malls, then the supermarkets.

"This too, will come to pass, as soon as we weed out the ones that are already here and stop rubberstamping visas and green cards with callous disregard."

Searches of houses will take place without warrants

"It happens now."

based on suspicions of an incompetent employee of the FBI who read a post on the internet made by a teenage prankster and traced it incorrectly.

"Ask Lelnad C. Scott about that. He knows all about that stuff. He claims to have an inside line on the FBI, as a close friend of his is employed by the FBI as an investigator, as he likes to say. He apparently thinks like you and is as paranoid as you, as he has told myself, and Mopar, that our posts on rec.radio.cb are being watched by the Feds. He also claimed Bin Laden is on the freeband channels communicating with his Jihad soldiers. All this time I thought he was full of it."

Innocent people will be beaten and killed

Happens now, has always happened, and will continue to happen. Again, it has nothing to do with your point, if you have one."

by these soldiers not fit for police duty. Life in America will become a new hell,

"Afraid not. Life will continue to improve in America, as we have always done."

a prison where people who do not like one another are forced by the point of a gun to live with one another, work with one another and eat with one another to satisfy the insane needs and desires of a small number of people, less than two percent of the population in America. These people hate everyone who is not one of them. They are the most "ethnocentric", the most racist group of people on planet Earth.

"We are one of, if not the most diverse country in the world. Hate and racism is taught, not a biological evolutionary trait. Conflict and race is not inherent."

They

"Which "they" are you referring to now?"

lie as a way of life, whether it be for survival or prosperity. No crime is too great to commit because they claim they were wiped out, removed from the face of the Earth in the 1940's in some event they call the "Holocaust".

"Oh, I see, you are back on your anti-semite rant."

Despite the fact that they are still here,
that they are the richest group of people in America, that they occupy and dominate most positions of influence in American society they still claim that they were destroyed in the 1940's, and that event that they call the "Holocaust" justifies everything and anything they do.
From 1940-1945 fifty-five million people died, but according to the Jews no one should think about anyone dying except "The six million". Why is that? Putting aside the fact that Jews-Rabbis-can only document the death of three and half million Jews during the period of 1940-1945, why should the entire world ignore the death of over 49 million non-Jews? What makes Jews so special?
You would never ask such a question though if you lived in America, not in public anyway. The Jews would brand you as an "anti-Semite".

"I'm not Jewish and I still say you are an anti-semite."

The Jews do not even accept the scientific fact that all Middle Eastern people-such as Palestinians-are "Semitic". No this lie you must accept as well or you are an "anti-Semite". Having been branded an "anti-Semite" you are then cast out by American society, you may as well just leave the country because no matter what your ability you are through. An "anti-Semite" might love the Palestinians, or might marry an Arab (Semite) but the Jews consider him or her an "enemy of the state" if they dare disagree with anything the Jews say in America. So who runs America?

"Why, Alan Greenspan, of course. <g>"

Who decides whom we Americans go to war with? How many Americans are aware that the Fortune 500 defense contractor Northrop is a Jewish

enterprise? Did you think that the Jews were just animals who made movies like "Guess Who's Coming to Dinner", "Sayonara" and "Save The Last Dance" (among many others too numerous to mention)?

"You watch way too much TV, but I think I told you that once before."

They control the guns as well as the news and entertainment. Jews control Wall Street (that's why the World Trade Center was hit) and if you look closely at Rumsfeld and Casper Weinberger, and former Senator and Secretary of Defense Cohen you can see the Wall Street-Pentagon-Jew connection.
Americans must wake up; Americans must see what is happening and they must fight to take back control of America from the alien element that has hijacked their government.

"Sure we must. After all, no one is dying to get here. It's not like we are the richest country on Earth or anything. Yea, we sure have it tough."

Americans do not have a choice about this

"Sure we do. Email me and I''ll educate you on how the electoral process functions as well as how congress and the rest get elected, not appointed."

because that alien element is committing genocide against people in the Islamic world and people in the middle east cannot just sit still and wonder when Americans will wake up to what is going on and put an end to it. If it were your children being tortured and murdered you would feel the same way.

"Wrong. If it were my family that lived among the heathen Arabs and their disgrace, I would spend my entire life attempting to move to a better place, even if it meant losing my own life in the process or taking several generations to actually succeed in abscounding."

The hatred by Jews for non-Jews cannot be explained rationally because the Jews are insane, wickedly so.

"I notice it's usually the poor bastards that don't actually like to work for a living that dis the Jews all the time."

Jews believe themselves to be "human" and all the worlds' people to be "animals", "beasts of the field", "natural slaves" here only to serve the Jews.

"Now where did you get that? Nothing the Jews believe can hold a candle to what actually is said in the Koran."

Even Jews who claim to be "atheist" (why does this not set off alarm bells? How can a "religious" group of people publicly acknowledge atheists among them in good standing?

"It's called tolerance, something you apparently were never taught as a youngster."

) believe themselves to be better than any non-Jew.
Americans who sit in front of their TV watching nonsense in the form of "sports" and "entertainment" (all produced and influenced by Jews) while stuffing their face with pizza, burritos and other crap will either wake up, shape up, and confront the Jews and what they are doing and put a stop to it or they will lose every part of their "way of life".

"I disagree. We will never lose heart, something you definitely do not possess."

Everything they do now and everything their parents and grandparents did as they lived their lives will come to an end. The Jews are putting up surveillance cameras everywhere while producing essays and video reports on the "news" telling you that it is for your own good. If you continue to sleep through the bombings-both here and abroad-then you have no one to blame but yourselves.

"Um, no. We blame those who dare attack our great country."

What could be so bad that people would sacrifice their lives to fly jet planes into buildings?

"Ignorance. People that need told what to do. People that have no education other than what some sand desperado tells them. People that are no better than animals. People that can't think for themselves. People that have no regard for human life. The list is endless."

If you don't know the answer to this question then you need to read this post again. Then you need to ACT.

"Apparently, you need to convert to the Jewish religion, then you may not feel so inferior."

For more on how they control America

"Pay attention to public radio."

Yup, I just got me another bite on my trolling line!

Alas, poor lelnad. Stop your chickenhawking and take your personal problems to email. I will click on nothing posted by yourself. I am not concerned with how you view me. It is your concern with looking like a fool through your rapidpostings as dweebo that is funny. And entertaining. Although I still do not understand why you cried for me all week long in the group. It has nothing to do with radio and you could have used email. Troll.

Yup, I just got me another bite on my trolling line!

news:17025-3BC1F7C3-124@storefull-123.iap.bryant.webtv.net...
Anyway, I didn't
"conveniently" leave out anything. It was intentional.

I'm sure it was. The part you left out nullifies the effect.

"Well, in all fairness this was first exhibited by you. You highlight it
by attributing your forged fetish post to me without complete headers.
The part you left out nullifies the effect. Glad to educate you in the
error of your ways."

Of course you do that routinely anyway, i.e.

"Of course you do that routinely anyway, i.e., take things out of
context, misattribute, lie, in order to distort the meaning when taken
out of context."

take things out of context, in order to distort the meaning when seen
out of context. Normal Twisted creative editing at work.

"As should you, when posting an old post, pathetically failing at an
attempt to misattribute it to me. Don't like the rules? Take the proper
avenue and get them changed."

Since you forge so many posts the safe bet is to attribute the posts to
you.

"Report me then <g>.I can care less what you think. I think it's funny.
It's not like there are any doubts left about your presence and dweebo
moniker among those who can read."

"Wow. I'm impressed <g>. That's probably where you plagiarized it for
your own use.

Well Twisted just another lie on your part.

"How can it be a lie when I said "probably? See, there you go again
letting your emotions get the better of you and posting before you
think. Better get some sleep tonight old man, so you can go to (ahem)
work and school tomorrow."

You should have down loaded and read it before making your comment.

"Damn, lelnad, when are you getting webtv? You are missing posts again
with your shitty ISP service. Get a webtv, we don't miss any posts. I
told you I will not click on anything you post or send. You have this

sick, twisted, fantasy concerning me and my underwear. You have this homosexual reference in all your posts anymore...I'm not interested, Lelnad. Your sexual preferences do not conern me in the least. You really need an outlet for that pent up energy and anger. You have it in your mind that I am the one that hacked you and you have cried to my ISP, sent me viruses, got yourself blocked from emailing me, and just generally made an ass out of yourself crying about me to the group. No one cares about your problems, old man."

You look rather dumb at the moment. You would see the tag line is properly atributed to me.

"Double wow. If I looked, that would imply I cared. I don't..only you do..and here you go with the ego thing...like that makes you accepted or something. It doesn't. Tell me, since you think it such a feat (it isn't) that someone paraphrased one of your lines in print that you plagiarized somewhere, what is the circulation of this publication you are bragging on that contains your name? I mean, you zeroed in, however erroneous, on circulation of my article, so you must judge the content based on circulation. What is it? You made yourself the social pariah, Lelnad, not me. Apply your own standards to yourself Lelnad. When we do it, you are transparent."

Of course you know anything about proper quoting in news posts nor taking credit for the ones you forge as well.

"Yea? Report me to webtv then. They pull an account for forging. Oh yea, you tried that several times, only they need headers to confirm it, just like the ones you fail to provide when you forgea post and try to attribute it to someone else. Besides, you were busted forging in rec.radio.amateur.policy by those amateurs way above you on the evolutionary chain, much more credible
than yourself. We believe them, as they never start trash here or call names, or instigate, or denigrate and would have no reason to say you were a forger if you were not. (sigh) We know Lelnad, we know. The paranoid thing again. Everyone is against you. Maybe you can get your FBI guy pal to sort it all out."

So how is the jock strap collection coming? You stated before how you like getting mail from Douge and worship the jock straps he sends you by placing them on the wall where you honor them daily. I'll bet you talk to those "saucer men" without a CB, what do you use, your Start Trek communicator? Remember don't let your boys wear any of the dirty jock straps they get for Holloween treats, you want first carck at that I'll bet.

Here's a better idea: The illegals take their conversations about amps
and freebanding somewhere else. This newsgroup is for CB radio, not
RF piracy. It's not suprising that there have been numerous attempts
by 'neutral' people to persuade the anti's to 'ease up' for the sake
of the group, but the same 'neutral' folks never seem to persuade the
illegals to 'ease up' on discussions of piracy, which, of course, are OT.
Maybe you should appeal to the keyclowns instead of those that oppose
them. After all, if there are no keyclowns, there will be no need for
the antikeyclowns. Whaddya say?

As I mentioned before, there are varying degrees of deviant behavior.
But regulation must be strict to prevent the cascade effect that has
happened in recent years (more power just to get above the noise created
by more people running power).

No, contrary to twistie's delusions, I'm not in Issaquah, I'm in the
the Pothole of the Pacific Northwest (Spokane). Like you, I have an
uncle that's a retired Boeing engineer (he was an EE too), and I have
many other family and friends over there that takes me over the pass
a few times each year. There are a lot of unusual things to see and
do over there, so if you want some suggestions drop me an email.

Sorry, it wasn't intened to sound nasty -- it was supposed to be a
parody of the typical keyclown reaction to the anti's. My brain flashes
when I see some of those wonderful old tombstones and cathederals in
the early B&W's, and I usually recognize lots of the test equipment
in the budget sci-fi flicks (lots of Tektronics and Eico scopes). In
fact, I was watching a movie the other day that showed the very same
BC transmitter that I have shoved inside an old military transport van.
I haven't been able to identify the transmitter, and now I forgot the
name of the movie, damnit!

>You don't CHEW oysters

Not so, Twistedhed. While many literally suck down raw oysters. (Usually with lemon juice and hot sauce.) Cooked oysters, particularly stuffed oysters, are made to be "munched." There are so many ways to prepare oysters, and I've never tasted an oyster dish I didn't like. Take care and 73.

Mark

Hi Steve,

I don't remember any amps, but that doesn't mean anything. I don't remember allot of stuff I should from the seventies. That's funny, catch the make? Take care and 73.

Source record: 99833

Hello All: Still looking for a tube socket for a 3CX3000A7.

Hope I typed that right, just came in from the aluminum tubing factory coughing up aluminum shavings, how wonderful.

Had a heck of a time with the cut off saw, bought a super duper none faris cutting blade for almost 300 dollars, to have "Saw Blade Ray" tell me the saw blade is a high quality wood cutting saw blade. And if ya like cutting wood to make little duckies this is the saw blade 4 ya.

No I said, I want super physco aluminum cutting saw blade, that doesn't leave any burr's and makes chicks call all day and night. Ray says: "Sure no problem Pilgrim, just cough up a hair ball of 125 dollars, and I'll fix ya up"

"Your on your own with your safe sex personality, though"

Well old man Saw Blade Ray was dead nuts on, again. The new saw blade cuts the aluminum tubing like a laser. He even made a tool allowing the tubing to be sawed from the end, leaving a tightening slot. Very impressive.

He doesn't have a tube socket for the metal 3000 tube either, but its nice to know ya can hack one out with a sharp saw blade, it ya wants 2.

Thanks Ray!

Jay in the Mojave

Are you the same twistedhed that has been here for almost two years?
Because even he would know that I take issue with illegal operators
that are screwing up the CB. But then you might have forgotten that
minor issue, just like you keep conveniently fogetting lots of other
things that show up on your monitor.

As far as your voluntary plea to become the group scapegoat, don't
bother. As an example, you provide the standard of idiocy by which
all others are compared. If I accuse someone of being a "twistedhed",
they only have to browse through the archives to see your obsession
with certain people, your complete lack of reason, your ridiculous
accusations, your pathetic forgeries (including the ones spamming the
group as an antikeyclown), your rebellious attitude towards peaceful
law enforcement, and your proud admissions of puppy-beating. Then they
will see you are still here posting the same garbage to the newsgroup
that is no different than the garbage you have posted for the past two
years.

No, twist, you are not the scapegoat -- you are the jackass that stands
proudly as a monument to freebanders everywhere, an image of ignorance

that can never be destroyed by anyone, including you.

HAHAHAHAHAHAHAHA!!!!!!!!!!

(Don't cry, twist, you did it all by yourself!!!)

Using your real name now, huh? Give twistie a call and maybe he will
let you join the Sparky-haters-very-anonymous support group he has
organized. Just like AA it has a twelve-step program, but most folks
recognize that program to be grade-school. I'm sure they have chairs
wide enough for you to attend without difficulty, and all the parking
spaces are for the handicapped -- both the physically AND mentally
handicapped! Thorazine and electro-shock therapies are optional but
highly recommended. You will have completed the program when you learn
that what goes around comes around. I also heard that the golden rule
is going to be added to the cirriculum in the near future.

BTW, I think Brainbuster is looking for a sponser.

The best oysters I found were down by the piers. We got stuffed and
then went into the Curiosity Shop. My sister blew chunks when I pointed
at one of the mummys and said, "Hey, look at that big oyster!" The next
day the mountain popped (for the fifth time) and we had to beat the ash
cloud home. I talked about that joke on the drive home, and got some
crazy recipies, like BBQ oysters (haven't tried it), oyster stroganoff
(very good!), and oyster tacos (very bad!).

Hey, did you know you can make a battery with oysters?

>isn't) that someone paraphrased one of your lines in print that you
>plagiarized somewhere, what is the circulation of this publication you
>are bragging on that contains your name?

Well you think it's plagiarized why not find from where, LOL. That should keep you busy dig through several years of Usenet posts. Of course you're just ticked because you didn't check the source before you posted your reply, and now you look even more foolish.

> I mean, you zeroed in, however
>erroneous, on circulation of my article, so you must judge the content
>based on circulation. What is it?

You made your views public in that sorry bit of prose. Associated your screen name with it. Now you get to get to live with the consequences.

>You made yourself the social pariah,Lelnad, not me.

Proziac to Twistedhed:
Twistie, Is Leland Talking to you?
I don't think he is so why don't you put it wide to the side and take a stand by or your
gums still a flappin. And you guys want to blame doug, or frank or who ever for posting bullshit posts when again You do the exact same thing but worse. Nothing cb or help related just a sarcastic post. Talk about get a life! Since you don't understand anything about legal electronics or otherwise you attempt to discredit him.LOSER!

pot=kettle=black
==========

The above was direct to you Twisted, the news group "pariah".

>"Yea? Report me to webtv then. They pull an account for forging. Oh yea,
>you tried that several times, only they need headers to confirm it, just
>like the ones you fail to provide when you forgea post and try to
>attribute it to someone else. Besides, you were busted forging in
>rec.radio.amateur.policy by those amateurs way above you on the
>evolutionary chain, much more credible than yourself. We believe them,

You know as well as I do that you use those free E-mail services and post through the mail2news services on the web. Several of those free E-mail accounts you have used have in fact been terminated. Since you claim I have forged posts else where prove it. Now as to the "We believe them". Please enumerate the "who", or are these people as real as your so-called "saucer men".

>as they never start trash here or call
>names, or instigate, or denigrate and would have no reason to say you
>were a forger if you were not.

There are far more Hams posting to this group than you may suspect Twisted. I run in to them in other news groups and private E-mail BBS lists I subscribe too.

So how is the jock strap collection coming? You stated before how you like getting mail from Douge and worship the jock straps he sends you by placing them on the wall where you honor them daily. I'll bet you talk to those "saucer men" without a CB, what do you use, your Start Trek communicator? Remember don't let your boys wear any of the dirty jock straps they get for Holloween treats, you want first carck at that I'll bet.

twistedhed@webtv.net wrote:

>"Amusing. What happened to the headers?

The message ID trace is sufficiency for your ISP to verify the post originated from your account. That short circuits the labor required to check through posting logs. You don't believe me then ask them yourself.

>Go ahead, post some phoney headers.

You have proved time and again you can read them anyway. I'm waiting for somebody to quote a message from somebody else with a header from one of your posts, and watch you run around claiming the header points to my ISP etc. Now that would really be funny. That would conclusively prove beyond a doubt you can read them.

>That got you warned last time by your ISP, which is why you
>stopped it. But if you're feeling froggy and really want to tempt it, I
>double dare ya' :)"

I don't know who they have been "warning" but I haven't heard a peep from my ISP. Of course you are aware I use two. Maybe not, you could be that dumb. It's obvious from reading the headers you can't understand. I haven't heard anything from the second one either. One I use at home and the other is the ISP used by my work QTH. I've mentioned this before on this group. So it's no big secret. You must be getting really frustrated bombarding ISP's with complaints only to see me continuing to post, and wondering why, hum?

>"I have a great signal from the pile. You still pissed about what
>happened on 27.555 yesterday?"

I was busy on 6m and 2m sideband to bother. If it was some yo-yo using my call, big deal. It's a quick way for them to get busted fast. A quick FCC DF check will verify where the signal is coming from. The FCC isn't that dumb unlike you.

Now if you want to do something useful in your state why don't you spend your time helping the guy out in Jupiter Florida who is getting fined $100 a day for simply flying the American flag. Oh, and try not to breath any Anthrax spores. If you die there wouldn't be anybody left to poke fun at on the news group any more.

850. Re: Systems

Newsgroup: rec.radio.cb
Date: 2001-10-09 18:28:43 UTC
From: Brainbuster <brain@buster.com>
Message-ID: <9pvv36$7ci$3@chilli.nntp.netline.net.uk>
Source record: 99875

Over the years, British TVs have seen some changes in the power supply methods... from the old valve sets, through the "CYCLOPS" as it was called, to modern systems with most power coming from the line output. A "half mains" chassis has been quite common, and has caused many problems for the unwary.

My CB suffers inteference from the computer. The source is actually the monitor, and if the monitor is switched off, the computer can be left on without problems (to save re-booting). If I start using both at the same time, I suppose I will have to find what the problem is.

I don't know what broadcast bands you use in the US, you seem to know more of our standards than I do of yours :~)
Our MW is still fairly full of stations, and some stations use MW only. There is limited space on the FM VHF, and I do not believe that they could all fit on. But most people now prefer the sound of FM stereo transmissions, much better sound quality.

After years of adding extra capabilities to existing systems (teletext, stereo, etc.) by "tacking" extra signals on to the signals, it seems that we are now seeing some total system changes.
Analog is now being replaced with digital transmissions, and radiowaves are being replaced with cable. Ironic really, as "wireless" is being replaced with direct connection.
I believe that cable could take over in public broadcasts. This could reduce inteference, kill off the "pirate" stations, and increase the free space in the radio spectrum. Although the majority of the spectrum is allocated for millitary and government uses.

CB seems to be stuck in a "time warp". At least our system is fairly recent, and they are said to be considering "packet" for CB. I cannot see it happening, considering the 10KHz spacing, and the way FM creates side frequencies all over the place (not like AM). Unless they give us a UHF slot to go with it.
Could you imagine a CB type service being added to the cable systems? Now that would be a system they could control.

Hi Mark.

Actually, I was just having a bit of fun, seeing the funny side of their ranting and whining. It's far better than letting the whiny assed Trolls get you upset or angry, as that is what they want.
But as someone seems to want to compare crimes...

Illegal CB is closer to a parking violation than it is to purposely killing innocent people. Whether or not you are willing to die in the process of your crime, makes no difference.
CB offences do NOT carry a life sentence or the death penalty, and certainly don't get your ass bombed to obivion.

Through CB, I have met plenty of great people, some would give you the shirt off their back, even if it was snowing. Whether or not these people were using legal equipment does not change the kind of people they are.
When I compare the friendly attitude of many CBers with the tight assed Trolls, who would not p**s on someone if they were on fire... I know who I would rather spend my time with.

Regards,

Brainbuster.

You give up too easily, and will probably end up just as p****d off with the Amateur band.
As many on here are also Amateurs, you have made a good start by insulting some of the Amateurs that you plan to talk to when you get your licence. And as so many Amateurs are also CBers, it may not be too long before you also give up on those bands.

CB and Amateur are different hobbies, with different purposes. Amateur radio is intended for those who wish to enter the technical side of radio at a hobby level. It is not intended for CBers who just want to get away from the people they consider to be "idiots", so do not use this as an excuse. Unless you have an interest in the technical side of radio and electronics, then you are going in the wrong direction.

There are plenty of good CBers out there, and on this ng.
What you also have to consider is that NOT all the people on this group are CBers. Some do not even have an interest in CB, they just want to ruin the group, and give a bad impression of CB.

Although there is NO reason for a CB vs Ham conflict, a few "old school" Amateurs are anti-CB, and some have even been known to disrupt the CB service with keying and music playing. As more ex-CBers move to Amateur (most continue to use CB), and the older Amateurs pass, this manufactured enmity will fade away.

You may give in on CB if you wish... But those of us with a REAL interest in CB will keep going, even after moving up to an Amateur or professional level.

Hi James.

The word "loss" (Sparkys word) was a poor choice. He was actually referring
to the amount of signal reflected from the antenna.
Look at his math theory, and I am sure you will see my point...

His idea of how SWR is calculated was incorrect, and I was one of the people
who corrected him on the matter. As he called me a "moron", to be corrected
by a "moron" does not say much for his intelligence.
He could easily have checked his figure in any good radio book (or CB users
manual), but didn't.

As for the loss, all that is reflected is NOT loss. Only that which is
dissipated as heat is loss, and this is only partly dependant upon SWR.
Some of the reflected power can be radiated by the coax, this is not really
loss (as it is still radiated RF), but I have seen it cause other problems.

BTW: I once saw a Lincoln for repair, damaged by a high SWR. The inductors
and capacitors in the output area were destroyed, and the PCB was well burned
around the output area... But the output and drive transistors were fine.

Regards,

Brainbuster.

^
^ First, not if they are using a bona fide CB Radio. Second since the "C" in
^ "CB" stands for "citizen" with no distinction is made based on any other
^ class of radio license. So using legal equipment at legal power levels a
^ Ham can be considered as much of a CBer as anybody else regardless of how
^ frequently they use the band. Of course you can tell the difference by
^ looking at how the S-Meter needle bounces up and down right? ;-)
--

I would imagine that the Amateurs who do this sort of thing will use their HF radio. Why buy a CB just for that?
There has been the argument on here that the term "CB" refers only to equipment that is legal for CB use. Using this argument, if the Amateur uses any amateur only equipment, he is not a CBer... he is a freebanding Ham.

But we do get into a grey area here... how do you define "CBer", the when word is not in my dictionary.
If a person is a CBer regardless of time spent on the CB, and listening does not make someone a CBer, then they are a CBer as soon as they key the mic on a CB.
When does someone cease to be a CBer? As an Amateur is an Amateur when transmitting on the Ham bands, and a CBer when transmitting on the CB band... then a CBer is only a CBer when they are transmitting on the CB band. As soon as they let go of that mic, they are no longer a CBer... until they key it again.

Maybe we should stop using the term CBer, and replace it with CB enthusiast (CB and Enthusiast are both in my dictionary). Let's not confuse the REAL enthusiasts with the anti-CB Trolls.

Peter.

> I agree with all of it otherwise I wouldn't have posted it.

Personally, I believe that it was written by someone who wants CB to be more
than it was ever meant to be, or ever will be.
It seems to suggest that CB is just another Amateur radio service, and it
isn't.

It may be a copy of something written a few years back (I have seen versions
of this before), and things have moved on. Most people have phones, even
mobile phones are so common now... how many people monitor channel 9 now?
In an emergency, people call the emergency services... not the CBer next
door.

Hey Fear, I'll save you the trouble. I have never been on the freeband.
Twisted is just spreading more of his manure around. He can complain all day
and night to ISP's till he turns blue, and I'll still be here because he's
complaining to the wrong party's ISP. Anyway it's not uncommon to hear a Ham
call now and then on the frreband. It's done by people like Twisted trying
to stir up more trouble. If you DF those transmissions and compare the
direction from your QTH with the address listed in QRZ or Buckmaster you'll
notice at times your antenna is pointed grossly the wrong way if the signal
really belonged to the fixed location station giving the callsign. Just more
of the typical CB crap from the micro minded likes of people such as
Twisted. Heck he even admitted to giving out false Loran navigation bearings
to "tourists" a month or two back in this very news group. There is nothing
this clown won't do, say, or lie about for kicks, on or off the computer it
seems now, including forging news posts and bootlegging Ham callsigns.

Where did Sparky say anything about "RF piracy" in this thread? He
wasn't even discussing it. But you came along and brought up the
issue. I bet if he responded to your comment you'd accuse him of
"preaching about RF piracy".

>Hey, did you know you can make a battery with oysters?

That's funny, Frank. We had oysters at a little place right down the street from the ferry that took us to a little Indian island. I forget the name of the island but as soon as you disembark, you're served a bowl of clam soup. The twist is that upon finishing your soup, you throw the white clam shells on the ground and step on them. It has the effect of creating a white walkway to the point where the actual tour starts.

Oh yeah, the oysters. The place is more like a stand with an outdoor dining room and they were absolutely delicious. (Although you had to fight off the flies as it was outdoors.) I must say, I've NEVER had a bad trip to Seattle. We circled the national park which took us far longer than we first suspected. (We realized this as we peered into Canada.)

Usually those "in the know" bid and supply their e-mail address via the "ask seller a question" feature. Upon the "end" of the auction, the high bidder is notified and given "first dibs," the rest is handled outside of ebay. Ebay has their heart in the right place though.

Here is the special email from @Home:

Subject:
Important information to our Comcast @Home customers regarding the status of Excite@Home
Date:
Sun, 30 Sep 2001 00:13:40
From:
Comcast Online Communications <ecareonline@comcast.com>
To:
Valued.Comcast@Home.Subscriber

Dear Comcast @Home Customer,

On Friday, September 28, Excite@Home, the Internet service provider for
Comcast @Home, filed for Chapter 11 bankruptcy protection to allow them
the opportunity to restructure their financial situation with their creditors.
As you may know, financial restructuring allows companies that have declared
bankruptcy to continue to operate their business successfully.

More than five years ago, Comcast committed to the high-speed Internet
business by partnering with Excite@Home, and we continue to be committed
to providing high quality, reliable service. We are confident that Excite@Home,
whose major shareholders include AT&T, Cox and Comcast, will maintain all
e-mail and web space services for our customers.

Comcast will continue providing its customers with the best high-speed
Internet service both now and in the future. We are doing everything possible
to ensure that the 950,000 customers we will serve by year-end will continue
to be served well while Excite@Home restructures its financial situation.

Comcast views high-speed Internet as one of the most important products
in our portfolio and we remain committed to this business and to our customers.
We thank you for choosing Comcast and look forward to continuing to provide
you with the best high-speed Internet service available.

Sincerely,

David Juliano
Sr. Vice President & General Manager

If it's like most older 2950's, the bulbs need replacing and the
solder joints need resoldering. It may also require other TLC like
a keypad switch and a real good cleaning of the case, front control
pad and the controls themselves. They make good handyman specials.

I've been known to buy then broken real cheap, fix and resell them
for a good profit. It's almost always the same shit. If I get a real
bad one, like a blown CPU, it becomes parts. Parts is parts!

For a person who can do the repairs on their own this would be a good thing. For those who can't it makes for a bad deal to them. The point of my post was to shed some light on the fact that there are some radios out there that are not always what they appear to be. I've been known to buy radios such as this also but have the facility to repair them on my own.
BUYERS.......Always ask more questions than you think you need to.....BECAUSE YOU NEED TO! ! !

> I would imagine that the Amateurs who do this sort of thing will use their HF
> radio. Why buy a CB just for that?

I think they would rather have a cheap $50 Radio Shack CB ripped off than an expensive HF rig to name one, and not to forget using Ham equipment on 11m is illegal too. Second yanking a rig out of the mobile all the time to use as a fixed base is a pain. It's easier to just leave the rig in the mobile. Third any dummy can figure out how to use the CB so the wife and kids can use it when driving around. I can imagine the problems if the wife or kids accidentally key the Ham rig up on 20m and say "breaker 19". Finally it's not all that unusual for many Hams to have more than one radio in the mobile anyway so adding in a small 11m CB is not a big deal. A friend does just that on a long trip. He throws a 11m handi-talkie on the seat next to him, while the ham rig is mounted to it's bracket on the floor under the dashboard. He uses a mag mount CB antenna with the handi-talkie.

>Maybe we should stop using the term CBer, and replace it with CB enthusiast
>(CB and Enthusiast are both in my dictionary). Let's not confuse the REAL
>enthusiasts with the anti-CB Trolls.

It may have been a hoax - I hope. Because i opened that post, & immediately got a message as is noted on this webpage http://hq.mcafeeasap.com/dispTrojan.asp?virus_k=99220 - which says it's a hoax. I ran my Innoculate-It program right away after seeing the message, & it found no infections.

Hello Bert: I picked one up a while ago that had a Kenwood external VFO
with a bitchen digital readout, and of course the Cobra 2000 digital
readout tracked the VFO readout. You could switch in the VFO or the
cahnnel selector in 1, 2.5, 5, and 10 Kc steps, simply .....bitchen.

Also had a trick new finial RF Amp built into the radio. There are some
really talanted people out there.

Came with a Heil mic and sounded great.

From what I can gather, this "virus" basically just forces you to shut
down and restart your news reader. The person who sent it probably sent
it intentionally.

907. Base Antenna, Solarcon or Shakespeare?

Newsgroup: rec.radio.cb
Date: 2001-10-10 07:44:54 UTC
From: Danny Young <dyng@earthlink.net>
Message-ID: <W%Sw7.4519$7B1.217656@newsread2.prod.itd.earthlink.net>
Source record: 99970

I have a 17 year old Shakespeare 16 foot Big Stick that's showing SWR 2.7. It is mounted on a 15 ft mast bracketed to the side of my home. When it was new SWR was 1.5.

I thought it was the RG-8/U cable (50' long) that is also 17 yrs old. So I changed it with new RG-8/U solid core with pre-installed SO-239 connectors, well tested it and SWR was worse "4". Thought it was the cable, so tried another store bought connectors installed cable, this time with foam core, SWR was the same 4.

The radio is a Uniden President Washington (17 years old), which was checked out at the local radio shop certified in perfect condition. I even connected my K-40 magmount to it stuck it on a file cabinet and SWR checked out 1.5.

So, does this mean I need a new antenna. I was hoping to get by with just new cabling. Why would new cabling give me SWR 4 while old cabling SWR 2.7?

I am looking at the Solarcon IMAX 2000 or Shakespeare NBS-2010 Army Big Stick.

Any recommendations?

At first, Outlook Express opened a window saying it had found an alt.config virus. As someone else said, I couldn't close that window but instead of rebooting I pressed <Ctrl> <Alt> <Del> to close OE. Then McAfee itself came up saying it had found this JS/Loop trojan in that message in my Temporary Internet Files. I ran Full Scan and deleted it, no other instances of it were found and I was able to boot OK this morning.

After having to reformat my C: drive a few months ago and repartition and reformat a friend's drive last month, I'm not taking any chances with these things! My friend had 360 files infected with five viruses and couldn't run his computer any more.

From Mc Afee:

JS/Loop
This is a trojan horse, not a virus.

This trojan is an infinite loop in JavaScript embedded in HTML. It has often been posted to newsgroups in a HTML message.

Loop means it executes the same action over and over without stopping. They usually repeatedly open new browser Windows until the script is stopped or the computer crashes.

Another kind displays a message box repeatedly, usually a hoax like:

** WARNING ** Windows has detected the alt.config virus on your hard drive. If you have recently opened an email or newsgroup message and see this alert your system is infected.

There is no alt.config virus. alt.config is a legitimate newsgroup.

Newsgroup messages which contain the JS/Loop trojan are usually forgeries. The From line is faked in order to get it to look like the message came from someone the real poster doesn't like. The current wave of JS/Loop postings (Oct 2001) are being posted to get back at some users of the alt.config newsgroup. The forger posts in the name of an alt.config regular, usually crossposted to alt.config plus several unrelated newsgroups.

Since this trojan is usually downloaded from Newsgroups and immediately displayed and run, there will probably not be any files containing this trojan on your computer, even if you were affected by it (but it is sometimes possible to find it in "Temporary Internet Files"). JS/Loop does not try it install itself on your computer or have any permanent effects. But it may force you to perform an unexpected reboot, and you may lose unsaved data that way.

It is best to avoid JS/Loop altogether by using a text-only newsreader, or if you are using Outlook Express, disable "Active Scripting" in the "Restricted Sites" zone and set NewsGroups to run in the "Restricted Sites" zone.

Coppers ain't no ham equipment dealer. The only people who think an
"amp" is needed on 10 meters are illegal CBers.

Kenny, I usually don't pay attention to your low-grade fever dreams
but this one had the germ of an excellent idea.

We know Bin Laden's gang uses walkie talkies to communicate amongst
themselves in the mountains of Afghanistan. What frequency they are
on doesn't matter, because a few well-placed keyclowns could jam all
comms in the region very effectively. If any keyclowns get blown up,
that's OK because as federal criminals, they'd be expendable.

I am anti-illegal CB. (And from what I read, you are pro-illegal CB)
"CB" is defined by the laws of the particular country you happen to be
in. Most countries have CB rules similar to the USA. None that I
know of define CB as megawatt amplifiers and 25-32 mHz transceivers.
I don't think the UK allows amps and freebanding as part of "CB", so
you might be better off calling such people by their real name:
"pirates".

I haven't had any problems with my IMAX-2000. It has had up to 1000 watts in it in the past and handled it fine. It gets about 400 on average daily use and is so far 2 years old. The only thing I have trouble with is neighbors as there is no ground plain, I seem to get into 1 neighbor. It has the rings so you can adjust it to the lowest SWR at where you talk. I can keep it below 1.5:1, according to my antenna analyzer, from 26.501 to 28.360. It's mounted at 40 ft.

This is just my experience with it. I would recommend it. Some people here said they blew there's up at 500 watts. Not sure how they did this since it is rated for higher.

That's cause the 'neutral' folks aren't really neutral.

Example. Check out Jim's views on
http://bbs.onecenter.com/cb/171.shtml which include loading me up
"with a 32 pill".

Author: Jim
Subject: Spamhater
Sun Feb 18, 2001 3:03 pm

Best bet is to ignore him. If a bunch of us start telling him to shut
the flip up, it will simply encourage the brain-challenged guy. The
best post I ever saw concerning the legality/illegality issue is the
street racing that occures. Sure, it's illegal, but has been going on
for a long time and likely always will. It's the thrill of the thing
and I, for one, am not concerned about the linear question. The
spamhater/cool/tron/hotrods of the world can sure make life miserable,
but if we can just ignore the posts, they WILL go away. Look at
rec.radio.cb. Once N8WWM and Voobner got the flames started, they just
won't quit. Now the garbage just goes on and on with no end in sight.
If anyone has a good idea how to stop it, I'd love to hear it (no, I
don't suspect we can find the guy and load him up with a 32 pill!) -
otherwise, I'm gonna ignore it. Other than that, how's things in your
neck of the woods?

73 from Rochester,
Jim

> Maybe you should appeal to the keyclowns instead of those that oppose
> them. After all, if there are no keyclowns, there will be no need for
> the antikeyclowns. Whaddya say?

Great idea. They could have their own group called
"rec.radio.keyclown" or "rec.radio.idontcare" where criticism of
illegal behavior is banned.

Hey Aaron

I have just a couple of questions abnd comments that I hope you take in a respectable manner. Especially since I am not a basher.

1. What are HAMS that are not interested in CBs, and have all of these frequency ranges to talk on concerned with this one freq band?

I have watched both sides of the whole thing. I think the feds do a good job of keep the abusers in line to a point. It seems to me that most of the abusers are HAMS. Everyone that I have ever seen that had the nerve to have a 10000 watt base station was a HAM. That being the case, maybe those are the people that the HAMS should be policing. not only that, but what about the people building this equipment? These guys are usually HAMS also. Also, who are the people that own these Peak-&-Tweak shops HAMS. Who are most of the top members of these top Freeband DX clubs? HAMS. You know, there seems to be a lot of pork cashing in on selling weapons to the enemy. Watts are just like inflation. The more power that is available, the more you are going to need...bottomline. So trying to change the world by posting message on a BBS/USENET that most people dont even read is useless.

2. Why are CBers such a threat?

Only defensive people attack first. What does a HAM have to loose? HAMS have a multitude of freqs, repeaters, space craft, and everthing else to talk on. Why concern yourselves with 11meter? Most people that are abusers talk on AM on legal channels. You know, some one is going to come out and tell me about "The Law, and Patriotism". That is a crock. When I dont feel like being bothered, I go to another band. If someone in my area is keeping me from enjoying my hobby, then I will bust him. Most of the time, that is not the case. Most people are not trying to talk to people world wide on an AM channel unless they are a power abuser(Remember how many of those people are HAMS).

Now Aaron. I agree with you that if you have the right equipment, you can talk the world with legal power. But coming on here trying to make a difference is just futile. Let the feds do their job. Be instrumental in encouraging people to go take the test and get their HAM license. Make it a positive experience so people will want to be a HAM, and a good one. I know a lot of people that tell me they love radio, and the only reason they will always be a Freebander and never become a HAM because of how stuffy and self rightous HAMS are, and some have even compared being a HAM to becoming a Jahovahs Witness (no offense, just comparing recruitment tactics).

Again, there is enogh information out there for people not to have an excuse not to know what the law is. Let the Feds do their job. Mind your own business.

Phineas

What Bullshit rock did you crawl from under. This amp is mostly used
for 10 meter where it can be used legally. and the only rule is that
you can only build 1 amp a year yourself for your own purposes.
selling it to a ham radio operator is not illegal. Selling it to a
closed minded bitchy person like you would be. If they are so illegal
to manufacture then why don't you stop the guys running the companies
that produce them. you can't and never will because this shit has
been going on since the ham radio operators gave up the 11 meter band
for Cb operators to use. bury it already and SHUT THE HELL UP!!

That is a crock of shit. i know Extra class HAMS that dont even know
how to hookup power to their radios, let alone get technical. Licenses
are designed to do 2 basic things. Regulate usage, and keep out the
"Riff-Raff". If I you want to learn about RF electronics, you can take
a class or read a book. I didnt know you need a license to do that. A
good tech can build a legal CB from scratch as well as a 2 meter
radio.

>
>

I will agree with you on that one. I would like so see some of these
cry-babies tryi to make friends, and convince people to be a HAM. If

beinga HAM is so damn great.

>
>Although there is NO reason for a CB vs Ham conflict, a few "old school"
>Amateurs are anti-CB, and some have even been known to disrupt the CB service
>with keying and music playing.

Yep, and that is just as bad as someone running an AMP, and just as
illegal. Regulations are ment to keep people inline on both ends. It
is too bad noone polices the content of a Newsgroup.

You know, I use to ride motor cycles. I also use to know a few
ranchers. I have been to both Cowboy, and biker bars. You know, they
listen to the same music, play pool and darts. Have the same trashy
women hanging around. Drink the same beer. Etc.... But if you get
these two types of people in the same place, they will fight. One ride
a horse, and the other one rides a Bike. The killer here is that the
Cowboy might own a cycle, and the Hippy might own a horse. Sounds
stupid doesnt it? Sounds Familiar also.

This is not really a virus. Imbedded in the HTML portion of the message
is a JavaScrip function that pops up an alert window. The problem is
that
it is in a never ending loop so it will continue to pop up alert windows
until it freezes the system or shuts down your news reader/browser.

The text message that is inserted in the alert window is:

** WARNING ** Virus Scan has detected the
alt.config virus on your hard drive. If you have recently opened an
email or newsgroup message and see this alert your system is infected.

So you see that no Virus Scan was actually run and no virus really
exists.
You will find no infections on your disks.

If you shut off JavaScrip in your reader/browser the message can be read
with out any problem. However, the message is total nonsense. These kind
of messages have been showing up a lot lately. The only real cure is
to shut off JavaScript when you are reading usenet news and then turn it
back on when your surf the web.

> new SWR was 1.5.
>
> I thought it was the RG-8/U cable (50' long) that is also 17 yrs old.

This is (was) a problem, but not THE problem. However, the losses
associated with a run of 17 yr. old coax likely masked "THE" problem.

> So I
> changed it with new RG-8/U solid core with pre-installed SO-239 connectors,
> well tested it and SWR was worse "4". Thought it was the cable, so tried
> another store bought connectors installed cable, this time with foam core,
> SWR was the same 4.

If anybody out there disagrees with what I'm about to say, please
correct me. I believe your SWR has been 4:1 for quite some time but
only became apparent upon replacing the old lossy coax.

> The radio is a Uniden President Washington (17 years old), which was checked
> out at the local radio shop certified in perfect condition. I even connected
> my K-40 magmount to it stuck it on a file cabinet and SWR checked out 1.5.

Good radio!

> So, does this mean I need a new antenna. I was hoping to get by with just
> new cabling. Why would new cabling give me SWR 4 while old cabling SWR 2.7?

Yes, it does. 17 years of exposure to the elements and corrosion are
likely the cause. If this were an aluminum antenna, I'd suggest
complete disassembly, thorough cleaning, and reassembly with new
stainless steel hardware...but disassemling a fiberglass Big Stick is
not a viable option.

> I am looking at the Solarcon IMAX 2000 or Shakespeare NBS-2010 Army Big
> Stick.
>
> Any recommendations?

Why shuuuwah!

Omni: IMAX 2000 (fiberglass) or Maco V5/8. (aluminum - you MUST
replace the hardware with stainless steel.)

Directional: Maco 3 el. yagi. (again, replace the hardware with s.s.)
This antenna is relatively inexpensive and the jump from omni to

directional can often be dramatic. I think you'll be pleased.

nofear@home.comm (No?Fear) If this is a representation of the illegals
God help you Guys. Well us legal operators don't want

"You're not legal. Besides you NEED us, evidenced by Lelnad howling when
I go away...hehhe"

Naw, we only need you, twist.

"I know it, Sparky, I know it. But, just for the sake of it, who else
are you speaking for in this context?"

You are the best representative

"That isn't answering the question sparky. Who are you speaking for this
time?"

of the warped logic behind the keyclown mentality, although Kenny is
gaining ground very quickly.

"Yea? Then focus all your attention on me. If what you say is true, you
need not give anyone else a hard time except for me. You can start with
explaining why you feel the need to squash conversations pertaining to
cb radio and all it entails, that you take issue with."

Are you the same twistedhed that has been here for almost two years?

"Naaa, that twistedhed had his ISP pulled, remember? Ask Lelnad."

Because even he would know that I take issue with illegal operators
that are screwing up the CB.

"You lie, Sparky. You have attacked me for speaking about freeband,
called names in almost all your posts, and have absolutely no way of
knowing if anyone here "Screws up the cb band" based on their
conversation. Your lies are transparent."

But then you might have forgotten that minor issue,

There is a difference between deliberate ignoring and forgetting.
Deliberate ignoring is what 90% of the group does to you and Lelnad. And
you still don't see the humor? Let me spell it out for you...you call
names, threatened Mopar to come to Ohio, threatened me that you came to

Tampa, howled like a baby wanting a bottle for personal information, and much, much more, all for MINOR issues. You and Leland are probably on the same BP medications. Hate to see either one in a real crisis."

" just like you keep conveniently fogetting lots of other things that show up on your monitor.

"Pay attention here. There is quite a difference between forgetting and intentional ignoring, which is what 90% of the ng has done to you and Lelnad. How many killfiled you in the last 2 weeks alone? Speaks for itself. Even some of the regs that attempted a decent dialogue with you ended up killfiling you because of your inability to debate."

As far as your voluntary plea to become the group scapegoat, don't bother. As an example, you provide the standard of idiocy by which all others are compared. If I accuse someone of being a "twistedhed", ...

"....it serves as more proof as the deity-like status you perceive me as. Must be the mark on your forehead."

they only have to browse through the archives
to see your obsession with certain people,

"You and CJ Lelnad are the only ones that address people, then yell they are obsessed with you when they answer your posts. Here's a thought....if it bothers you, don't address them. If you feel addressing one and not receiving a reply is your thing, ain't gonna happen here. AS I told 'Nad, I take great pleasure in pointing out your transgressions.And if you do address someone and receive a reply then cry "obsession", you really ought to work on your own problems, for they are quite severe."

complete lack of reason, your ridiculous accusations, your pathetic forgeries (including the ones spamming the group as an antikeyclown),

"Heheh..your slip is showing. Did you ever think to report it? Again, as "Nad was told, webtv pulls an account for forging. He was so certain it was me he made more stupid false statements about me no longer being with webtv, and man, you appeared to be drooling over it."

your rebellious attitude towards peaceful law enforcement, and your proud admissions of puppy-beating. Then they will see you are still here posting the same garbage to the newsgroup that is no different than the garbage you have posted for the past two years.
No, twist, you are not the scapegoat -- you are the jackass

"Whenever you call a name, you have lost any point you were trying to make."

that stands proudly as a monument to freebanders everywhere, an image of ignorance that can never be destroyed by anyone, including you.
HAHAHAHAHAHAHAHA!!!!!!!!!!!
(Don't cry, twist, you did it all by yourself!!!)

"That's not crying you hear, Sparky. It's laughter."

Yup, I just got me another bite on my trolling line!

Last time I checked, Aaron, it was still legal to own one of these. I see you conveniently cut out my statement re. ebay having their heart in the right place. I perused ebay this morning and found other CBs modified to extend into the 10-meter band, nary a word on those? I'm merely plainly stating the facts, much like yourself re. Part 95 rules. Surely you don't consider the discussion of the practices of ebay and their clients illegal or condoning illegality, do you?

When you bag this guy (or his customer) transmitting...pounce, Aaron!!! Tape recorder in one hand, and a current copy of the full unabridged version of Part 95 in the other. (No wimpy "Part 95 In Plain Language" for this superhero!) Then you will have done your share for freedom and justice..."Yes commissioner Gordon...er, Powell, Aaron here! Sorry Aaron. I'm just "funnin'" with ya. Seriously, it just a discussion about a Cobra 2000GTL with expanded frequency coverage. You can own it, but not transmit with it. If you read into it too much, you'll see that I'm plotting the takeover of Upper Muldovia, lighten up. ;-)

945. Re: Systems

Newsgroup: rec.radio.cb
Date: 2001-10-10 15:45:01 UTC
From: twistedhed@webtv.net
Message-ID: <16962-3BC46CFD-9@storefull-126.iap.bryant.webtv.net>
Source record: 100017

From: brain@buster.com (Brainbuster)
Over the years, British TVs have seen some changes in the power supply methods... from the old valve sets, through the "CYCLOPS" as it was called, to modern systems with most power coming from the line output. A "half mains" chassis has been quite common, and has caused many problems for the unwary.
My CB suffers inteference from the computer. The source is actually the monitor, and if the monitor is switched off, the computer can be left on without problems (to save re-booting). If I start using both at the same time, I suppose I will have to find what the problem is.

"I used to have a steady interference sound when my neighbor fired up her old printer. One of my antennas nearest her house was responsible for picking this up. A cheap cure was to go higher with the antenna."

I don't know what broadcast bands you use in the US, you seem to know more of our standards than I do of yours :~)

"For cb and freeband, many use 25 to 27.995 without a problem."

Our MW is still fairly full of stations, and some stations use MW only. There is limited space on the FM VHF, and I do not believe that they could all fit on. But most people now prefer the sound of FM stereo transmissions, much better sound quality.

"There is a certain satisfaction to be had concerning long distance communication on FM between 25 to 27.995."

After years of adding extra capabilities to existing systems (teletext, stereo, etc.) by "tacking" extra signals on to the signals, it seems that we are now seeing some total system changes.
Analog is now being replaced with digital transmissions, and radiowaves are being replaced with cable. Ironic really, as "wireless" is being replaced with direct connection.
I believe that cable could take over in public broadcasts. This could reduce inteference, kill off the "pirate" stations, and increase the free space in the radio spectrum. Although the majority of the spectrum is allocated for millitary and government uses.
CB seems to be stuck in a "time warp". At least our system is fairly recent, and they are said to be considering "packet" for CB. I cannot see it happening, considering the 10KHz spacing, and the way FM creates side frequencies all over the place (not like AM). Unless they give us a UHF slot to go with it.
Could you imagine a CB type service being added to the cable systems? Now that would be a system they could control.

"Hehehe...watch out. The saints of virtue are gonna lob some boulders at ya' for even suggesting such a thing."

Twistie, Perhaps you can show a copy of the e mail you got back from
@home when you complained to them about me. I didn't hear you or leland
out there this weekend what are your numbers? and what are Lee's Ill
have to listen up for you

Hey Fear, I'll save you the trouble.

"Yea? Cool, post it."

I have never been on the freeband. Twisted is just spreading more of his
manure around. He can complain all day and night to ISP's till he turns
blue, and I'll still be here because he's complaining to the wrong
party's ISP.

"Really? Then go ahead and post the exact same forge you did and don't
forget to add the exact same semiheaders that made it appear as it came
from me. If I called the wrong ISP, then go ahead and do it again. Prove
me wrong, lelnad."
"
Anyway it's not uncommon to hear a Ham call now and then on the
frreband. It's done by people like Twisted trying to stir up more
trouble. If you DF those transmissions and compare the direction from
your QTH with the address listed in QRZ or Buckmaster you'll notice at
times your antenna is pointed grossly the wrong way if the signal really
belonged to the fixed location station giving the callsign.

"Nice try, but no cigar. You have no gear to talk from in your
apartment. Your linear is in your ancient 4 wheeler."

Just more of the typical CB crap from the micro minded likes of people
such as Twisted. Heck he even admitted to giving out false Loran
navigation bearings to "tourists" a month or two back in this very news
group.

"Better book up the definition for "admitted." I did in it intentionally
and, not that anyone gives a damn but you, but you agreed with my
reasoning...hehehe."

There is nothing this clown won't do, say, or lie about for kicks, on or
off the computer it seems now, including forging news posts and
bootlegging Ham callsigns.

"Bootlegging call signs? Believe me Lelnad, you are not me, no matter
how many times you tried to be. Why in the world would anyone imitate

you?"

Yup, I just got me another bite on my trolling line!

948. Seeking antenna tips ...

Newsgroup: rec.radio.cb
Date: 2001-10-10 15:55:06 UTC
From: Svideo@webtv.net
Message-ID: <24036-3BC46F5A-2@storefull-112.iap.bryant.webtv.net>
Source record: 100018

I just acquired an AH-27 handheld CB. It really is a marvel of miniature electronics, and take my word for it, these things work beautifully!

The problem is that I live in a ground floor apartment, and need some rational suggestions on what a guy could do to improve reception.

I plan to upgrade the factory antenna that comes with the unit for roaming around, but I'm looking for something external that makes sense when I'm stationary at home -- aside from installing a tower rig that the property management here won't allow.

I've heard lots about the "Firestick" from several sources, but until I get I get some critical feedback from actual users (or from antenna pros) on its effectiveness, it will remain a consideration.

Your input would be greatly appreciated, and in case this plays a factor in your assessments:

The glass doors to my apartment living room face due-east toward a large open lawn area, which is separated by a small patio slab and wooden privacy partition that stands 4 feet high.

If you would, please respond to svideo@webtv.net directly, and Thank You!

Then you should buy it and all the other "illegal" stuff on this
newsgroup just to keep it out of our hands.

He probably should,

"Why don't you buy it since you claim it bothered you earlier?"

at least until your mommy can teach you something about self-control and
responsibility.

"Now that pent up anger and misdirected disdain wouldn't have anything
with you not handling grief, would it, Sparky? I still think you need to
talk with someone and I am telling you this with no malice. You come off
as a deeply disturbed, angry individual to many, and for no reason. Only
you know if it is voluntary. If it is, everyone's opinions of you is
valid. If it isn't, you need counseling, maybe an MRI."

Just wait till you hit puberty, Scott, you will need a whole lot more
self-discipline when that happens. But of course, that's a few years
down the road..

Hi Frank,
While I find your post technically correct, the last sentence just makes
everything before it too extreme. I happen to think there is a spot
somewhere in the middle where "Kilowatt Charlie" get's clobbered and the
folks running 25 watts on the legal 40 and/or working DX get a slap on
the wrist and guided toward AR. I don't equate the two, just MHO.
Are you in the Issaquah area? I'm in Bellevue every few years or so, my
uncle's a retired Boeing engineer. Perhaps one day we can grab a cold
one and some clams on the half-shell down by the ferry? I'll introduce
you to the family. I'll probably be back in Seattle year after next.
Take it easy.
73 de Bert
KC2HMN

As I mentioned before, there are varying degrees of deviant behavior.
But regulation must be strict to prevent the cascade effect that has
happened in recent years (more power just to get above the noise created
by more people running power).
No, contrary to twistie's

"Ahhhhh...more of "MY" obsession......LMAO!"

delusions, I'm not in Issaquah, I'm in the the Pothole of the Pacific
Northwest (Spokane). Like you, I have an uncle that's a retired Boeing
engineer (he was an EE too), and I have many other family and friends
over there that takes me over the pass a few times each year. There are
a lot of unusual things to see and do over there, so if you want some
suggestions drop me an email.

You don't CHEW oysters
Not so, Twistedhed. While many literally suck down raw oysters. (Usually with lemon juice and hot sauce.) Cooked oysters, particularly stuffed oysters, are made to be "munched."

"Yup. And they are NOT chewy when cooked properly."

There are so many ways to prepare oysters, and I've never tasted an oyster dish I didn't like.

Sparks, if it makes you feel better, I do happen to have at my disposal, one empty spool that used to contain a length of thread. I offer it to you so that you may feel above someone, and that you may stand on it to preach to those that you may think actually give a shit about your stance on RF piracy.
Take care little man,
Randy

Using your real name now, huh? Give twistie

"Obsession? OCB? ADD? LMAO...AGAIN!"

a call and maybe he will let you join the Sparky-haters-very-anonymous support group he has organized.

"Don't flatter yourself. I don't hate anyone."

Just like AA it has a twelve-step program, but most folks recognize that program to be grade-school. I'm sure they have chairs wide enough for you to attend without difficulty, and all the parking spaces are for the handicapped -- both the physically AND mentally handicapped! Thorazine and electro-shock therapies are optional but highly recommended.

"As is an MRI for you along with grief counseling."

You will have completed the program when you learn that what goes around comes around.

"So you tasted 'Nad's crow?"

I also heard that the golden rule is going to be added to the cirriculum in the near future.
BTW, I think Brainbuster is looking for a sponser.

"I think you need to attend a real church instead of building one to me."

What it really does is point out that there are hazards to accepting anything other than plain text. This kind of thing is just as
annoying in your browser as it is in your mail/news.
Some of us actually turn of all functionality and read the message and HTML source document in a text editor before turning any of
the functionality on.

Fortunately, this little bit of script doesn't really hurt anything, but it does raise the security awareness.

With a little study, it can be shocking to find leaks to the Internet, and even remote control of your machine is probably more
common than virus problems.

:
: This is not really a virus. Imbedded in the HTML portion of the message
: is a JavaScrip function that pops up an alert window. The problem is
: that
: it is in a never ending loop so it will continue to pop up alert windows
: until it freezes the system or shuts down your news reader/browser.
:

: The text message that is inserted in the alert window is:
:
: ** WARNING ** Virus Scan has detected the
: alt.config virus on your hard drive. If you have recently opened an
: email or newsgroup message and see this alert your system is infected.
:
: So you see that no Virus Scan was actually run and no virus really
: exists.
: You will find no infections on your disks.
:
: If you shut off JavaScrip in your reader/browser the message can be read
: with out any problem. However, the message is total nonsense. These kind
: of messages have been showing up a lot lately. The only real cure is
: to shut off JavaScript when you are reading usenet news and then turn it
: back on when your surf the web.

news:20622-3BC23C28-69@storefull-127.iap.bryant.webtv.net... From:
no-spam@junk-mail.net (Leland C. Scott) "As should you, when posting an
old post, pathetically failing at an attempt to misattribute it to me.
Don't like the rules? Take the proper avenue and get them changed."

"Having a difficult time taking your problems with me to email, 'Nad?
Ok, I'll indulge you."

I think the meaning is very clear below Twisted, complete with header.

"First off, you shouldn't try to think. You make erroneous statements
while posting in anger that always come back to bite you, such as your
threat to bring Dogie back to spam the group, then making good on it,
then denying you have any connection with him. It's the booze, Nad. The
hours you devote to me in the middle of the night coupled with the sauce
messes you up. You really need webtv, dude, especially if you think your
ode to men's underwear contains a full header, simply because it isn't
showing up. Is that like that "AØ AØ" you have such a hard time
with? Configure your browser to one newsreader and only one posting name
and your problems will cease."

nice forgery Dougie but the headers don't lie. Undoubtedly you don't
understand how the Usenet works so I will explain it to you, my
anonymous acolyte
what do you know of my life? The jockstrap you sent in the mail is a
trophy of your docile worship of me and it hangs proudly above my mantle
I will never cease pirate CB activity as long as it irks you or someone
like you. However, as a consolation and to ease your suffering, I will
stay within the confines of the freeband for now. The saucer men tell me
I have a good signal in the pile
==========
"Report me then <g>.I can care less what you think. I think it's funny.
It's not like there are any doubts left about your presence and dweebo
moniker among those who can read."

Then that leaves you out Twisted since you can't read. That much is
obvious.

"Oh! Watch the anger, Nad. Think before you post."

"Wow. I'm impressed <g>. That's probably where you plagiarized it for your own use.
Well Twisted just another lie on your part.

"How can it be a lie when I said "probably? See, there you go again letting your emotions get the better of you and posting before you think.

You enjoy looking like a fool Twisted? You screwed up. Didn't bother to check the source using the provided link. Said something stupid as usual. Now you want to simply sweep another one of your screw ups under the rug with all the rest. You should have down loaded and read it before making your comment.

"Nothing to sweep under the rug except the trail of slime that follows you."

Oh well you're the official news group clown anyway.

"Source duly noted."

"Damn, lelnad, when are you getting webtv?
You are missing posts again with your shitty ISP service. Get a webtv, we don't miss any posts. I told you I will not click on anything you post or send.

Surprise me Twisted and tell the truth for once. You lied about this before.

==========
Seems like you can't help yourself. I'll bet you can't go for a month without hammering out a reply to anything that I post. You just can't.

"Sure I can. Check your postings, Nad. I hardly ever respond to you or Sparky unless I am addressed or mentioned. Brush up and pay attention."

You have this
sick, twisted, fantasy concerning me and my underwear.

So is having Doug's jock strap on your wall a "fantasy" or did you lie about that too?

"Nothing to lie about. Why does talking about men's underwear hold such a dear place in your topics?"

But then again you don't lie do you? So I guess it's not a "fantasy", just wanting confirmation of fact.

"Yea..I know what you mean..I been waiting for those nonexistent headers you attributed to me along with an article again to whack you with 'em. Your declination to post them is noted."
==========
twistedhed@webtv.net (Twistedhed) wrote: From: no-spam@junk-mail.net (Leland C. Scott) "Twistedhed" <twistedhed@webtv.net> wrote in message news:23991-3B5F4CB7-72@storefull-124.iap.bryant.webtv.net...

I stand behind what I write.
(snip)
==========
You have this
homosexual reference in all your posts anymore...I'm not interested,
<snip>
"Double wow. If I looked, that would imply I cared. I don't..
<snip>
You keep saying you don't care Twisted but you can't keep from posting replies can you?

"I don't care, Lelnad. It's just that you have a comprehension prblem. Do I reply to AA anymore? No. Fear boy? NO. Just you and Sparky, 'Nad, cause it's so fun."

Any more lies?

"No, you were spanked for the last one."

It doesn't. Tell me, since you think it such a feat (it isn't) that someone paraphrased one of your lines in print that you plagiarized somewhere, what is the circulation of this publication you are bragging on that contains your name?

Well you think it's plagiarized why not find from where, LOL.

"You didn't answer the question, LOL."

That should keep you busy dig through several years of Usenet posts. Of course you're just ticked because you didn't check the source before you posted your reply, and now you look even more foolish.

"I'm ticked? Gee, thanks for telling me. Lelnad, you don't have enough down to upset me."

I mean, you zeroed in, however
erroneous, on circulation of my article, so you must judge the content based on circulation. What is it?

You made your views public in that sorry bit of prose.

"Awww, "Nad. I would never advertise my work to you. Even you don't expect that line to be believed."

Associated your screen name with it. Now you get to get to live with the consequences.

"I already thanked you once. The consequence was a six month contract (with a contigency clause) with a publisher right in your own back yard. You are correct, I do live off those consequences."

You made yourself the social pariah,Lelnad, not me.
==========
--
Proziac to Twistedhed:
Twistie, Is Leland Talking to you?
  I don't think he is so why don't you put it wide to the side and take a stand by or your
gums still a flappin. And you guys want to blame doug, or frank or who ever for posting bullshit posts when again You do the exact same thing but worse. Nothing cb or help related just a sarcastic post. Talk about get a life! Since you don't understand anything about legal electronics or otherwise you attempt to discredit him.LOSER!
pot=kettle=black
==========
The above was direct to you Twisted, the news group "pariah".

"Wow. It's funny that you must look to others for support. Now look at who you looked to, Fear boy! LMAO! Damn, where did you get the word pariah from? :)

"Yea? Report me to webtv then. They pull an account for forging. Oh yea, you tried that several times, only they need headers to confirm it, just like the ones you fail to provide when you forgea post and try to attribute it to someone else. Besides, you were busted forging in rec.radio.amateur.policy by those amateurs way above you on the evolutionary chain, much more credible than yourself. We believe them,

You know as well as I do that you use those free E-mail services and post through the mail2news services on the web.

"Oh, yea? I thought it was cotse. Isn't that what you said?"

Several of those free E-mail accounts you have used have in fact been terminated.

"Make up my mind, would you?"

Since you claim I have forged posts else where prove it.

"Waaaaa"

Now as to the "We believe them". Please enumerate the "who", or are these people

"Certainly. Ask Sparky. Or do a back search like you are so fond of, take all the people you have ever insulted, falsely accused, forged, and the names will jump right off your monitor at you.well, maybe not, you oughtta get webtv, yours is messed up."

as real as your so-called "saucer men".

"Heheheh..at least you didn't mention my underwear."

as they never start trash here or call
names, or instigate, or denigrate and would have no reason to say you
were a forger if you were not.

There are far more Hams posting to this group than you may suspect
Twisted. I run in to them in other news groups and private E-mail BBS
lists I subscribe too.

"If you only knew how ironic that statement trly was."

So how is the jock strap collection coming?

"Ahh, I knew you couldn't help yourself. I told you once. Go to a mens
bath house orr something to relieve your hangup and pent up homosexual
eneries that manifest as fantasizing about me in my jockstrap, would
you? Already told you, not interested in discussing my underwear or
anything else that may be of your fantasies and fetishes. I want to know
why you hauled ass off 555 last weekend when I identified myself."

You
stated before how you like getting mail from Douge and worship the jock
straps he sends you by placing them on the wall where you honor them
daily. I'll bet you talk to those "saucer men" without a CB, what do you
use, your Start Trek communicator? Remember don't let your boys wear any
of the dirty jock straps they get for Holloween treats, you want first
carck at that I'll bet.

twistedhed@webtv.net wrote:
"Amusing. What happened to the headers?
The message ID trace is sufficiency for your ISP to verify the post
originated from your account. That short circuits the labor required to
check through posting logs. You don't believe me then ask them yourself.
Go ahead, post some phoney headers.
You have proved time and again you can read them anyway. I'm waiting for
somebody to quote a message from somebody else

"You mean like your alter egos?"

with a header from one of your posts, and watch you run around claiming
the header points to my ISP etc. Now that would really be funny. That
would conclusively prove beyond a doubt you can read them.

That got you warned last time by your ISP, which is why you stopped it.
But if you're feeling froggy and really want to tempt it, I double dare
ya' :)"

I don't know who they have been "warning" but I haven't heard a peep from my ISP. Of course you are aware I use two. Maybe not, you could be that dumb. It's obvious from reading the headers you can't understand. I haven't heard anything from the second one either.

"Then here is your chance to prove me wrong. All you have to do is repost that forgery and attach my article to it again. Just once."

One I use at home and the other is the ISP used by my work QTH. I've mentioned this before on this group. So it's no big secret. You must be getting really frustrated bombarding ISP's with complaints only to see me continuing to post, and wondering why, hum?

"I don't want you gone 'Nad. I told you that many times. The liquor is affecting your brain cells. By the way, since you mention it, how is that crow?"

"I have a great signal from the pile. You still pissed about what happened on 27.555 yesterday?"

I was busy on 6m and 2m sideband to bother. If it was some yo-yo using my call, big deal. It's a quick way for them to get busted fast.

"Well, you have been saying this for two years now. In all fairness, yes, it could have been someone usng your call. They did disappear rather quickly when I keyed. But as you are so fond of sayng, if someone is using your name, it isn't up to me to worry about the authenticity."

A quick FCC DF check will verify where the signal is coming from. The FCC isn't that dumb unlike you.
Now if you want to do something useful in your state why don't you spend your time helping the guy out in Jupiter Florida who is getting fined $100 a day for simply flying the American flag.

"That bothers you as well? Figures. After all, it wasn't that long ago you were comparing freebanders to terrorists."

Oh, and try not to breath any Anthrax spores. If you die there wouldn't be anybody left to poke fun at on the news group any more.
--

"In spite of your hollow and erroneous complaints, I was not the recipient of any such warnings you allude to. Eating the crow while you post as Dweebo showed that."

971. FS RCI 2950, $135

Newsgroup: rec.radio.cb
Date: 2001-10-10 19:30:47 UTC
From: karl_suss@yahoo.com
Message-ID: <7350ea64.0110101130.57379886@posting.google.com>
Source record: 100034

This radio is still available (see previous post for details).

Judging by the followups I got on my original post, I feel I need to clarify some things. First, I didn't realize $135 was low for this radio. I looked up a new 2950 and saw $200, so I normally figure a little more than half for a used item is a reasonable price. Second, this radio is really in like-new condition. Never been mobile, no bulbs need be replaced. Total transmit time was about 10 minutes. And it's a newer version with no battery to replace. The only thing wrong with it is that it was a little dusty (from lack of use), but I took care of that.

So if you're interested please reply to karl_suss@yahoo.com. I haven't gotten many offers and I would really like to sell it fast; I need the money to finance another radio before I pay my credit card bill!

Hey maybe we can have a group called rec.radio.cb.aaronsafool
Yeah thats the ticket, we will start our own litte hate newsgroup
concerning your fantasy of being sombody of any great importantance.
we can just bash and cross post everythng to this group, but of course
have it moderated to keep you and your hitler youth out.

now aaron where does it say he is going to rob a quickie mart?
you sure do have a poor use of a brain. he is not a criminal,
and what he is doing nothing wrong until convicted by a court of law,
to which you are not a part of. if you had any brains you would
try to get a job at the fcc and bust all these people, now then
your life would be fulfilled otherwise you are just being an
oxygen thief, someone that lives but really doesnt have anything
good to say.

I always have Java and JS turned off in Messenger when reading news. I
also don't POP my mail, I run it all through Hotmail. That and NAT, I've
been good and clean. It's kind of hard to hack a 'puter at 192.168.0.2.

Tim, I hate to bust your bubble, but, except the the extremely fast 5 WPM CW test, the same could be said for the extras. A friend of mine has a tech class license that he has held since perhaps the 60s. All he has to do is fill out some paperwork and he is a general. No CW, no theory. The current general is what the tech was 30 years ago (except, of course, that sometime some friendly VEs have been known to 'fix' your test for you or let you 'borrow' a test in case you have memory problems and don't want to memorize the whole thing. Pretty quick they might start packing the tickets in Cracker Jax boxes).

Cheers and 73 from Rochester, NY
Jim

:>
:> No. If they do not normally communicate on the CB band, then they are not
:> CBers. The Hams that go to the CB bands simply to create as much havoc as
:> possible are still Hams -operating out of band.

: First, not if they are using a bona fide CB Radio. Second since the "C" in "CB" stands for "citizen" with no distinction is made based on any other class of radio license. So using legal equipment at legal power levels a Ham can be considered as much of a CBer as anybody else regardless of how frequently they use the band. Of course you can tell the difference by looking at how the S-Meter needle bounces up and down right? ;-)

The Hams I am talking about are using Ham gear to cause the interference, not
CB gear. They certainly are not using legal CB gear - as is born out by the
FCC's enforcement action notifications.

Sure, if a Ham uses legal CB equipment on CB frequencies, then he is a
CBer, as well as a Ham.

I don't publicly give personal information, and I can remember what
I said. I am only one and post as one.

My news path has changed because there is no longer a peering
agreement between @Home and my old posting source. This change
was made on my end to reduce bandwidth and costs associated
with bandwidth to the other place. About the same time,
Comcast subdivided the node I am one, changing my IP from the
old 24.3 to a new 24.9 IP. I am still just one person. I am Scott. <:

It sure scared me. I couldn't find any reference to the alt.config virus on the net, so I got braver (after ripping my network cable out of the router) and tried it again. Thanks to all for exposing this host.

Now, let's find the bastard who sent it and go break his face!

hey all I am alive and well in NYC, I am the transportation coordinator, the local term is "wagon master". I arrange the transportation for all Red Cross workers and local volunteers to get into their work locations from their hotels and from the operational HQ in Brooklyn.

This is kinda strange, damn twisted how can you stand this web tv crap..... thats what I have in my hotel room and it sux, no offence twist.

hey ICECOLD if you get this msg, call my cell # 347-219-3978

I had box tickets to the opening Yankee playoff game tonight, but some wise a$$ lifted them on the subway tonight :/ so I went to the Harley Davidson Cafe instead, it's right at the end of the block from my hotel.

I hope everyone is well, I'll be here for at least 2 more weeks, working 12-18 hour days I don't get much time to use this peice of crap unit in the room.

Yup,
Dropped mine off this afternoon for a little Dyno tuning.
I'm promised at least another 3 to 12 horse's more. But
the killer is another 5 to 20lbs torque, that's the bitchen
part. Nothing like having 115 to 125 hp, 100 to 112lbs
torque on a 405lbs, 21 degree rake motorcycle.
Had a guy that just purchased a 2002 model admiring
mine, when the owner of the Buell shop came out said,
"stay away form him. he buys all spare parts..... Just
to have" LMAO, because I bought spare tank, body,
fairing, fender, hell even a spare frame when I had
a chance.

Steve,
It must be quite windy where you are. The specs say it can take a 100 mph
wind load.
Curious on how you tuned it for cb. I see that there are tuning rings at the
base of the unit. Does it come factory tuned, or will I need to spend a
whole lot of time adjusting the rings and going back to the swr meter?

My reply thanking 'Myst' was returned as not delivered, so I'll say thanks again for the interest. The radio with the dud mike was a Ham International Jumbo. I imagine someone had some kind of problem with the amplifier board as it was stuck in the hand mike and the plug had been removed too. It might be worth repairing but first I'd like to have some information! Thanks again for the interest shown... Ken

2.7?

It sounds like there may be some serious problems with the antenna.

The probable reason that the old coax showed a lower SWR was that the
old coax had become quite lossy - from corrosion of the core/shield
and probably water in the coax. The new coax has low loss, so shows
a much closer SWR.

If you tested the SWR at the antenna, you would find that the SWR was
identical - for both the old and new coax. It might even be a bit
higher than 4:1.

My Nickel's Worth
Editorial Opinion
by Doug Smith

Cherokee Driver
Unit 9830

(headline)
Use it or lose it - forever.

"We can get our communities back from vandals and I think we can take
our CB band back from the hooligans."

It sure seems to me that the people of the U.S. let the pirates and
bandits take over the CB. We allowed the silly-band to become sillier.
We gave up trying to use it for business and family activities because
we were chased off the air by depraved hooligans.

The band abusers that attached illegal power amplifiers to their CB's
gave the radio service a huge black eye from which CB has never
recovered. The illegal power amplifiers used by pirates have caused
horrendous RFI and TVI problems. The public is outraged. The Congress
reacted abysmally by legislating away more of your freedoms against
search and seizure. If you own a CB radio and your neighbors hear you
in their telephones or entertainment equipment your local police CAN
visit your home and inspect your station.

Your local police can now investigate the RFI complaints of your
neighbors and you may not even be running extra power! Amplitude
Modulation, by its very nature gets rectified in lots of poorly made
audio amplification circuits - even in expensive stereos and TV's. RFI
and TVI are universally recognized by engineers and the FCC, as the
fault of the home entertainment device. Manufacturers of home
entertainment devices do NOT shield such devices against RF fields,
because they insist the cost is prohibitive.

But never mind the proximate cause. Now Congress has set the precedent
and made CB RFI/TVI reported by your neighbors a local police problem.

It's just dumb. Despite the fact that RFI/TVI is far less likely to happen if the CB power is legal and the antenna and ground are installed correctly the police may now come knocking on your door. Even if YOU obey the law the jerks running power just made you a bad guy in perpetuity. How many of these power junkies do you think the police will catch and how many law abiding folks do you think the police will inspect?

Then there are the free banders. Those outlaw cretins that occupy the channels above and below the CB band. Why are they there when it is so easy to get a Ham license? Well, I think it is because there is an allure to being an outlaw. These CB outlaws have also contributed to the RFI/TVI problems that have bloodied every other wireless hobby AND some have even had the nerve to petition the FCC seeking changes to CB FCC Rules that would make their illegal activities legal.
And don't forget the hobby communicators, that despite FCC rules to the contrary, still use CB like a Ham band. They communicate with stations over 150 miles away in violation of the rules, exchanging QSL cards like Ham wannabes. Come on, enough is enough. It is not even silly any more it is just dumb. CB was intended as a radio service for local personal and business use. Imagine what it could be like if the riffraff left the air. Perhaps even the police would feel motivated to listen to Channel 9 again. You do know that the outlaws and cretins chased them off the air too right?

Then there are the strange ones. The people who get on the air to sing, yell obscenities, make noises, and jam the heck out of the few businesses and families trying to make use of the CB service. Mental midgets. Where do these people come from? You know what? We do not have to listen to them or reply to them. They don't get their kicks if we ignore them. After a while behaving like a two-year old won't be much fun and they will simply fade away.

The frightening thing is that free banders and CB outlaws have earned an undeserved folk status in American culture. Kind of like graffiti vandals have earned their undeserved folk status as oppressed artists. The only way to deal with graffiti is to remove it. The only way to deal with on-the-air-vandals is to remove them. Those that abuse the CB by operating with illegal power or operate out of band need to go.

Our Federal Communications Commission IS doing the job. They are busting the pirates. They can only keep busting the pirates if we tell them where the pirates are.

Isn't it time we took CB back? Isn't it time we as a nation of civilized people gave the heave-ho to the uncivilized rabble that took the band from honest folk lo these thirty or more years ago?

CB is a wasteland, but it does not have to remain one. In this new Popular Wireless Magazine, CB Web, we will take the unpopular opinion. The one we also call taking the high road. We will do our best to promote the legal use of the Citizens Band for family and business

communication. There are more of us than there are of them. Report the free banders you know to the FCC and discourage others from using illegal equipment. Use CB for its intended purpose or lose it, forever. Bring your legal CB friends out of the closet and use the band until the cretins give up on us.

It seems a futile task to try and fix CB and many have told me it is not worth my time. They said the same thing about graffiti vandalism in my community and around world but DougWeb.com was the kindling spirit behind the world's first world-wide Anti-Graffiti organization, NoGraf, headquartered at NoGraffit.com. The 300 or so members of that organization would disagree with the nay-sayers. We can get our communities back from vandals and I think we can also take our CB band back from the hooligans.

The CB Rogues Gallery
for 2001

The immature illegal acts of a few ruin everything for us all. The following persons and businesses were cited, warned, or fined by the Federal Communications Commission for serious violations of the FCC Rules in the Citizens Radio Service.

This information is available to anyone in Public Notices located at the Federal Communication Commission website. Each group of violations has a link to the page where the information can be found. You might also wish to read the FCC Enforcement Bureau Inspection Fact Sheet. It applies to CB operations.
Rule violators have historically created serious problems for the entire radio service, other radio hobbyists, and our country. The sad part is that violators have also built a culture of acceptance around themselves. They have even achieved public notoriety when they should receive scorn. They persist in attempting to make their illegal activities legal through petitions for FCC Rule changes.

* Illegal CB amplifiers at base stations and in mobiles can cause horrendous RFI in consumer electronic devices. As a result a dangerous precedent was set when Congress allowed local police jurisdictions the right to resolve CB RFI/TVI complaints by inspecting stations and looking for illegal devices. The actions of a few morons have whittled away even more at our basic freedoms against warrantless search and seizure. It is only a matter of time before perfectly legal CB stations begin having visits from the police.
* Illegal use of CB systems and the epidemic of complaints to the FCC (46,000 in 2000) has created a new form bigotry in this country. Now anyone with a wireless hobby that uses an outside antenna is suspect of causing radio or television interference. The result is that builders and real estate companies actively discriminate against hobbyists preventing them from living where they choose to live. The public outcry against TVI and RFI has become yet another form of discrimination.
* Rule violators choosing to operate outside the authorized band segment interfere with world-wide communication above and below the CB band. They rationalize their activity as a hobby much like the graffiti vandal might rationalize painting over a wall.
* Rule violators turned the service into a wasteland, dramatically reducing its popularity with businesses and families. The pathetic and childish behaviors on the band chased off the rest of us.

* Like graffiti did in the 70's, illegal CB use spread worldwide. CB pirates from the USA and South America can be found in the 10 meter Amateur Radio Service CW band. The culture of the rule violator is now the culture of a folk outlaw. A rogue outlaw that has had serious consequences on the radio hobbies.

Rogues and their
FCC CB Violations
FCC ENFORCEMENT BUREAU FIELD OPERATIONS LIST OF ACTIONS TAKEN , 8/29/01
47 C.F.R. ï¿½ 95.411 (CB Rule 11) May I Use Power Amplifiers?
Kevin Williams, Vancouver, WA. Portland, OR Resident Agent Office. (7/12/01).

news:<DM9x7.6928$7B1.447174@newsread2.prod.itd.earthlink.net>...
> Check out the new CB Web Magaznine at http://www.popularwireless.com/cbweb/

All in all, it appears to be a decent resource and I'm always glad to
see more CB magazines. (online or otherwise)

I snipped this from the commentary from Doug (Hmmm?) had under the
editorial opinion, "My Nickel's Worth."

" Then there are the free banders. Those outlaw cretins that occupy
the channels above and below the CB band. Why are they there when it
is so easy to get a Ham license? Well, I think it is because there is
an allure to being an outlaw. These CB outlaws have also contributed
to the RFI/TVI problems that have bloodied every other wireless hobby
AND some have even had the nerve to petition the FCC seeking changes
to CB FCC Rules that would make their illegal activities legal"

If anybody can point me to a petition that seeks to legalize
"freebanding," please point me to it. I'd like to see it. I performed
some web searches but came up with nothing. I also checked out the FCC
website and found no such petition. I don't think such a petition
would get much support. The use of a medical term to describe those
who engage in "freebanding" kinda takes away from his point, but his
point in quite valid nonetheless. Thanks for the link, Danny.

Most likely he is referring to the petition that was submitted to lift the distance limit... I highly doubt that a petition for open operation in the Freeband would even be considered before it hit the circular file....

>>"Source duly noted."

Well at least we agree on one thing, you're a clown. That's progress.

>"Damn, lelnad, when are you getting webtv?

And waste my time stuck with a connection speed of 28.8Kbps like you? Naw, I'll stick with the 1500Kbps cable modem service I have.

>You are missing posts again with your shitty ISP service.

Ah, more passive agressive behaviour. You really should talk over your problems more with that shrink friend of yours you made a big deal about a while back.

> Get a webtv, we don't miss any posts.

Yeah, that's good because you don't have any "kill file" ability with that cheap service. You're "forced" to read everything.

> I told you I will not click on anything you post or send.

I'll bet you will. Just like the drug addict you can't help yourself.

>"Sure I can. Check your postings, Nad. I hardly ever respond to you or
>Sparky unless I am addressed or mentioned. Brush up and pay attention."

Well I don't mention you. All my comments are typically directed to "Twisted". You also seem to respond to several other names as well, the ones you used in you forged posts.

>You have this sick, twisted, fantasy concerning me and my underwear.

Oh, I'm not, I'm just asking about the "trophy" above your "mantle". You identified it as a "jock strap". The news group is wondering if that is a lie, or a missprint on your part.

==========

>"Yea..I know what you mean..

Oh I'll bet you do. That's why you have never answered the question.

>"I don't care, Lelnad.

You said that before in this post, but you still keep tapping away at your keyboard. I don't think anybody believes you Twisted.

>It's just that you have a comprehension prblem.

You know if you had a real computer, and a real ISP, you could then use a spell checker, and at least lend some credibility to your claim of being a "writer". The number of misspellings in your posts is just outrageously funny for somebody who claims to write for "Knight-Ritter".

>Do I reply to AA anymore?

That twelve-step program will help you with your drinking problem Twisted. Of course I guess it's hard to spell right, and use correct grammar, while typing away drunk at the keyboard.

>No. Fear boy? NO. Just you and Sparky, 'Nad,cause it's so fun."

Is that what the "saucer men" tell you while you're passed out on the floor?

>"No, you were spanked for the last one."

You also seem to have an S & M fetish too. You really are screwed up. Better make that appointment with your shrink friend ASAP.

>It doesn't. Tell me, since you think it such a feat (it isn't) that
>someone paraphrased one of your lines in print that you plagiarized
>somewhere, what is the circulation of this publication you are bragging
>on that contains your name?

Your jealousy is showing Twisted. You just can't stand how people laughed at that poorly written prose featured on the Sporadic Wave site. It was put there so others could get a good chuckle over the simple mind set of a CBer. I'm sure it will make it's appearance from time to time to remind you why you're not a "real" writer.

>"I'm ticked? Gee, thanks for telling me. Lelnad, you don't have enough
>down to upset me."

I can tell, it's easy, you just go out and forge another post from me.

>"Awww, "Nad. I would never advertise my work to you.

Of course not. You got it published on the web so EVERYBODY can read it, and get a good chuckle out of the poor writing. Associated your screen name with it. Now you get to get to live with
the consequences.

>"I already thanked you once. The consequence was a six month contract
>(with a contigency clause) with a publisher right in your own back yard.
>You are correct, I do live off those consequences."

Yeah, taking out the garbage.

>"Heheheh..at least you didn't mention my underwear."

I didn't have to, you did it for me. But then again you did say it was Doug's, and now you claim it's really yours?

>"If you only knew how ironic that statement trly was."

Feeling out numbered Twsited?

So how is the jock strap collection coming?

>"Ahh, I knew you couldn't help yourself. I told you once. Go to a mens
>bath house orr something to relieve your hangup and pent up homosexual
>eneries that manifest as fantasizing about me in my jockstrap,

Oh gee, now you even admit to wearing Doug's jock strap. That is really sick.

>I want to know why you hauled ass off 555 last weekend when I identified
>myself."

You and Tim were on while one of you was bootlegging my callsign. Just like you post forged messages on the news group. Of course it's sort of weird when the beam is pointing to Texas for the station using my call, and not Michigan.

At the risk of starting a MASSIVE flame war, I had one question.
Does wattage really matter that much in terms of gaining more TX
distance - or does it just merely provide you with the same coverage
radius and the ability to blast out everyone's pacemakers over that
radius? I know people with 500 watt rigs, and they don't seem to
transmit any farther than my legal 5-watt rig, they just TACK my
db meter when I recieve their communications.

The number of misspellings in your posts is just outrageously funny for somebody who claims to write for "Knight-Ritter".

"Um, that would be "R-i-d-d-e-r", 'Nad...heheheh, how can one live to be as old as you and retain so little knowledge and common sense? And where did I say I wrote for them? I said they were one of my current employers. Stop ASSuming. See what happens when you try to think? "

Do I reply to AA anymore?

That twelve-step program will help you with your drinking problem Twisted.

"Don't drink, "Nad, but you obviously convinced everyone that you pound them down. QAlso convinced us that you lie like hell and have no job based on your incriminating statements that you post from supernews from work, but are unable to relate to us what shift you supposedly work. Not important anyways. It was just another chance for me to point out your transgressions, which I am so fond of."

Of course I guess it's hard to spell right, and use correct grammar, while typing away drunk at the keyboard.

Like your problem with "AØ''?

No. Fear boy? NO. Just you and Sparky, 'Nad,cause it's so fun."

Is that what the "saucer men" tell you while you're passed out on the floor?

"No, you were spanked for the last one."

You also seem to have an S & M fetish too. You really are screwed up. Better make that appointment with your shrink friend ASAP.

"Nah, I'm quite content being twisted. It has worked for me for quite a long time and it has a certain talent of attracting losers not unlike yourself to entertain myself with, especially at a time like this when my work is tedious and emotional due to recent happenings around the world. You have provided me with an outlet each day, a guaranteed smile, and another gig. My way works just fine, thank you very much."

Tell me, since you think it such a feat (it isn't) that someone paraphrased one of your lines in print that you plagiarized somewhere, what is the circulation of this publication you are bragging on that contains your name?

Your jealousy is showing Twisted.

"Yea, that's it. I'm green with envy over you."

You just can't stand how people laughed at that poorly written prose featured on the Sporadic Wave site. It was put there so others could get a good chuckle over the simple mind set of a CBer. I'm sure it will make it's appearance from time to time to remind you why you're not a "real" writer.

"Fine with me..I'm proud of the article. Your opinon is by are of the minority from those who have expressed their sentiments to me concerning the article. And you do know how great your personal opinion is valued by the majority here. So, how long have you aspired to get paid for what I do, Lelnad? You have shed a great deal of light on your personal problems with me. Why didn't you just come out and say you aspired to write? I could have assisted you in many ways, pointed you to the correct outlets who are willing to exploit your strengths (if you have any) and take a chance on a beginner. Usually it is only delinquent children that attack the kid on the block with the shiny new bike. I now see how this carries into adulthood by underachievers who fail to attain goals they have set for themselves. In order to compensate for their inabilities and failures, they must find fault and blame with others, usually accompanied by critical but worthless allegations, along with the false belief that your (their) opinion is such that of an unrealistic, elevated status. This serves to pacify the underdeveloped, possibly damaged social orientation of the individual, simultaneously feeding the ego, albeit temporarily. Episodic events have a tendency to increase in frequency and escalate in tone and/or behavior. Classical grandiose behavior, to be exact. This also is covered in basic psych. Check it out."

"I'm ticked? Gee, thanks for telling me. Lelnad, you don't have enough down to upset me."

I can tell, it's easy, you just go out and forge another post from me.

"Awww, "Nad. I would never advertise my work to you.

Of course not. You got it published on the web so EVERYBODY can read it, and get a good chuckle out of the poor writing. Associated your screen name with it. Now you get to get to live with
the consequences.

"I already thanked you once. The consequence was a six month contract (with a contigency clause) with a publisher right in your own back yard. You are correct, I do live off those consequences."

Yeah, taking out the garbage.

"Heheheh..at least you didn't mention my underwear."

I didn't have to, you did it for me. But then again you did say it was Doug's,

"No, that was you, shortly before you threatened the group with bringing Dogie back to spam us and resume his anti-campaign, which you of course now reign supreme with."

and now you claim it's really yours?

"If you only knew how ironic that statement trly was."

Feeling out numbered Twsited?

"Oh, so THAT is what you are attempting to portray? Not at all, nad. Laughing at your demonstrated incompetency at thinking you are gettig away with anything, anything at all."

So how is the jock strap collection coming?

"Ahh, I knew you couldn't help yourself. I told you once. Go to a mens bath house orr something to relieve your hangup and pent up homosexual eneries that manifest as fantasizing about me in my jockstrap,

Oh gee, now you even admit to wearing Doug's jock strap. That is really sick.

"Wow, You really are messed up. Along with comprehension problems, you hallucinate. Better have that MRI I suggested Sparky get. The alcohol can eat the brain and you not even be aware of it happening, no matter how obvious to those around you."

I want to know why you hauled ass off 555 last weekend when I identified myself."

You and Tim were on while one of you was bootlegging my callsign. Just like you post forged messages on the news group. Of course it's sort of weird when the beam is pointing to Texas for the station using my call, and not Michigan.

"Wow. Nad' QUICK! It's behind you again."

Yup, I just got me another bite on my trolling line!

>db meter when I recieve their communications.

I was listening to a local guy talk to a fairly distant town, maybe 30 miles away. He was using beams and power, and was putting in something like 10 over 9. Using my Cobra mobile, I put in an S-4.

Is it really that much of a difference? No. I'd rather go for a better antenna. Every doubling of power is a 3 dB increase, or just under half an S-unit. One day I heard a guy bragging about how "everyone is going to be really surprised" with his linear. It had three power positions, high, medium and low. That was 200, 150 and 100 watts. From a practical standpoint, there is no difference between the three. Maybe someone with a very accurate meter could tell the difference, but there would be no difference in terms of audible reception.

100% correct.. If you really want to "get out"... worry more about your antenna than how much power you're putting out.. I used to talk all over the "bowl" on 2 watts with a GrantXL back in my "naughty" days... and the guys on the bowl didn't know the difference...

"151 in my little 2-watt mud duck beat'em'up diesel truck, steppin up.. whoop whoop!" (Anyone remember that???)

I was using a coil loaded, shortened, dipole on the passenger side mirror of my KW T-600...

Think about it.

webdoc@mailandnews.com
(Keith Hosman Red Cross Disaster Services)
hey all I am alive and well in NYC, I am the transportation coordinator,
the local term is "wagon master". I arrange the transportation for all
Red Cross workers and local volunteers to get into their work locations
from their hotels and from the operational HQ in Brooklyn.
This is kinda strange, damn twisted how can you stand this web tv
crap..... thats what I have in my hotel room and it sux, no offence
twist.

"Heheh..none taken. The room would have the older type, not the plus
with upgrades. Couple that with the crowded browsers where you are, I
don't think I could use it for anything there myself."

hey ICECOLD if you get this msg, call my cell # 347-219-3978
I had box tickets to the opening Yankee playoff game tonight, but some
wise a$$ lifted them on the subway tonight :/ so I went to the Harley
Davidson Cafe instead, it's right at the end of the block from my hotel.
I hope everyone is well, I'll be here for at least 2 more weeks, working
12-18 hour days I don't get much time to use this peice of crap unit in
the room.

Hello,

Better than adding an amplifier to your setup is to put up the most efficient antenna system that you can afford. A directional antenna will give you much more benefit than an amplifier. There is a commonly used rule of thumb that says that you get about a 10db gain for every 10 feet above ground level up to about 30 feet. After the gains relative to height begins to diminish. An antenna at 30 feet would give you about a 100x (20db) advantage over an antenna at 10 feet. To do the same with an amplifier you need to increase your power from 4 watts to 400 watts and it doesn't do anything for your receive. Of course individual results may vary depending on the amount of ground clutter and metallic objects nearby - but you get the idea...

And you have to hear 'em to work 'em unless all you are interested in is being heard...

From: mbleiweiss@laurelholdings.com (Mike Bleiweiss)
At the risk of starting a MASSIVE flame war, I had one question. Does wattage really matter that much in terms of gaining more TX distance - or does it just merely provide you with the same coverage radius and the ability to blast out everyone's pacemakers over that radius? I know people with 500 watt rigs, and they don't seem to transmit any farther than my legal 5-watt rig, they just TACK my db meter when I recieve their communications.

"Yup. It's a risk, alright, but the wattage will get ya' through the massive pileups every time."

Like most anything else it depends on what you are trying to do, where you plan to do it, and who you are doing it to.

If you are running one-way transmitting (broadcast) there ain't no substitute for horsepower. On FM you do it with a 10 bay antenna and 10kw for about 100k Effective Radiated Power. If you are running Radio Luxembourg on longwave, you do it with a megawatt or so. If you are running Shortwave Broadcast, you direct your power to a target area. All of these are so you can be heard on some form of muntz radio with at best a chrome-plated whip antenna.

Communication is not one way so reciprocity enters the picture. Ain't a lot of sense in burning the needles off the pine trees for several clicks when the person you are desiring to contact is running 2 AA batteries to a Zippo. It makes a difference whether the person is across town or several F2 layer skips away; the crosstown is harder. As the old saw goes, you can't work what you can't hear. So the more logical approach is large, high, directional antennas.

On the ham bands in the mid-continent, we are one skip further from everywhere so the major requirement for DXing is what we call a 2,4,6 filter, gets rid of New York, Florida, and California. Every beam is set for max front-to-back rather than max forward gain. And this is to be able to hear, not talk.

And there is the little matter of propagation on 27 MHz. When the gods smile upon you, pumping a signal into Lower Slobbovia is no trick at all with five watts. So being 92 over nine is no real advantage; someone with a tenth of the power is 82 over 9 BFD. Frequency does make a difference or Shortwave stations would not go as high as the MUF (Maximum Useable Frequency over a given path) will allow for their efforts. The 17 and 21 MHz bands are alive today; in five years the world will fight it out in the 12 MHz band in daylite and the 6 and 7 bands at nite.

Then there is the matter of operator skill. Running a peanut whistle if nothing else teaches one how to snag DX right out from under the jaws of the howling wolves.

Were I to design CB with a clean sheet of paper, the power limit would be about 35 watts which is plenty to cross towns where 5 is not and more than enough to be useful for E and F layer contacts. But linear owners and builders would be honored every year with a mass castration.

Without knowing a cherokee cm 10 from tomato paste if it didn't come with
it, you are screwed.

FM and AM are night and day in the receiver bandpass and detection stages
and different if not all that difficult in the transmitter.

oops, sorry, the cherokee is a CB radio it covers from 23.815 to 20.555Mhz.
I know of a norweigan radio called zodiac, that is the same exact radio,
mainboard and all, only does FM. DO i was wondering if anybody here knows if
the CM-10 can me modified to do FM also.

do a search at google for cm-10 and for the zodiac cb radio.

thanks again.

He did not say the petition sought to legalize freebanding. Only that
it sought "changes to FCC rules".

> > AND some have even had the nerve to petition the FCC seeking changes
> > to CB FCC Rules that would make their illegal activities legal"

Confusion probably stems from his reference to freebanders in the
beginning of that particular paragraph.

That would imply a lack of reading comprehension on Doug's part or just plain ignorance to what RM-9807 was all about...NOT breaking the law and attempting to change the rules legally.

>Confusion probably stems from his reference to freebanders in the
>beginning of that particular paragraph.

No confusion here, the entire paragraph appeared to reference "freebanding." I read no redirection in subject matter.

Guess you'll have to keep looking for a fan club, Aaron.

Exhibit A.

Not every CB-WEB advertiser and not every retailer subscribes to this code. In order for it to be more than just wishful thinking it is up to the rest of us to buy only legal CB radio products and to refuse to buy products that are not legal to use. if there is not market for the illegal products there is no interest in selling it. As a CB Web reader you may buy from retailers that sell gray market products but you buy only products that are legal to use in the USA.

Charges a fair market price for CB radios, equipment, and accessories.
Does not furnish customers with CB modification information.
Does not make modifications to CB radios for customers that would be illegal to use. e.g. out of band or higher power.
Does not sell, manufacture, or distribute illegal power amplifiers to CB customers.
Does not sell gray market radios intended for illegal modification.
See the GMRS Retailer code for additional items.

Uh oh, where there's an exhibit a there must be an...

Exhibit B.

http://www.bills2way.com/
(This is in no way a jab at Bill's shop. It is first rate and deservedly has a reputation of providing "top notch" service.)

Riddle me this? What principle is a worldwide standard and has prompted many an individual and company to "sleep with the enemy?" HINT: It's made up of four words and two punctuation marks. Take care and 73.

> KC2HMN

Bert, you seem to have mastered the art of saying something without
the appearance of actually saying it. You ought to be in politics :)

I agree that it's good to see the FCC doing its job. But please note
that the web page containing the editorial and FCC enforcement info
was the effort of a private citizen.

I know you will agree that he has the good of CB in mind. It is my
belief that, while the FCC is "supposed" to see that the CB rules are
obeyed, good citizens are also "supposed to" encourage their peers to
obey the rules and discourage illegal behavior.

For example, such efforts as "Neighborhood Watch" perform some of the
duties of police who are "supposed to" patrol and observe and prevent
crime. No one complains that only police should be patrolling because
they are the only ones that are "paid to".

I am not an FCC agent, but if I see keyclown equipment on eBay, for
example, I will file a complaint about it. I hope you can see through
the smokescreen that the illegals lay down about how following rules =
fascism. As I've explained many times before, it's not about slavish
devotion to rules for rules sake. It's about the betterment of CB:
something that all CBers should be concerned with.

That was the message that appeared. I did find it strange that it was an OE window and not a Virus Scan one, but later a Virus Scan one did appear saying that post as it was in my Temporary Internet Files was infected with the JS/Loop trojan!

It may be a harmless, nuisance thing but after the problems a few of my friends and I had with viruses a few months ago I wasn't about to take any chances. Judging from the weirdness of the message anything could have been possible.

Is there a dark side to CB? Is it safe? There is very much a dark side to CB. When used as a directed communication tool between family members or friends in a caravan or park setting you are generally safe. Unfortunately CB has attracted some very strange users. You will hear grown men singing, shouting, making weird noises, and using off color humor. You will hear sexual innuendo, and maybe even drug dealers and prostitutes at truck stops. It sounds just like visiting a big city in person and walking through the down town. Keep that in mind as you cruise the highway with your CB. Anyone can buy a CB and put it it on the air. To a degree you should be guarded but don't be paranoid. Don't talk to strangers that make you feel uncomfortable. CB will only remain a wasteland if we allow the morons, flakes, jerks, perverts, and creeps to keep it. While I am on the road I will hear things that make you wonder about life itself. It is tragic that people behave the way they do.

There is more to the dark side right? Yes, lots more. CB has attracted a huge hobby following of people that operate using illegally modified equipment, linear radio frequency amplifiers, and on radio channels above and below the CB band.

It's not exactly clear what you are trying to say, Mark (and Bert). If you think the author of this web sites views should be ridiculed or discounted because he includes 'Bill's 2 Way' in a list of CB suppliers, then say so.

Otherwise, all the verbal dodging and weaving just makes you look shifty.

Peer pressure, or bullying?
Either way, this is not letting the law deal with it.

> If they don't they reported to the FCC. I see nor reason why the same can't
> be done on 11m.

Look up the word "peer", non-CBers are not CBers "peers".
And using abusive language is not "peer pressure", it is bullying.

Your description does not match the tactics being used on this newsgroup. The
Idea is not to warn, then report... it is to abuse and offend, repeatedly.

> I don't expect the problems to disappear completely,
> however they can be reduced considerably.

Not with the tactics used on here... they are just creating anger.

Add to this, the fact that some of the "AKCs" are not picking on just the
illegal users. They also use name calling and oscene language directed at
those who are NOT using or selling illegal equipment.

> As a start the open buying and
> selling of illegal equipment needs to be stamped out.

Is this not a job for the proper authorities? Do you not trust them to do
their job?

> Going after a few
> hundred illegal amplifier manufactures and export radio dealers selling to
> the 11m market is a far smaller enforcement problem that is doable.

The "AKCs" are not the police... It is not their job to "go after" anyone.

Out of interest, do US Amateurs have a rule regarding how to deal with illegal pirates on the Amateur bands... would the tactics used on here be acceptable on Amateur radio?

Regards,

Brainbuster.

> FCC's enforcement action notifications.

The enforcement logs only mention if illegal power is used, non type accepted equipment is being used, and if the station was transmitting out of band. The exact equipment used is not identified. That would included modified CB radios as well. The level of jamming etc. on 11m is mostly done by CBers themselves, and very little is attributable to other sources. It's a simple fact there are 10 to 100 times more CBers than Hams. In fact there is probably only about 3 to 4 million Hams world wide with the largest number being in Japan. Compare that to the estimated 10 million plus CBers just in the USA, which only has approximately 650 thousand licensed Hams. The numbers alone demonstrate that most of the interference is caused by CBers do to the large number of them, many with little to no regard and respect for others on the air.

As a side note I was monitoring a couple of truck drivers using AM on 28.085MHz Wednesday afternoon again, which to refresh your memory is the CW section of an exclusive Ham only band. They used perfectly good North American English, not the Spanish you hear on the high end of the Freeband. No mistake about it, they were in North America, and they were illegally on the Ham 10m band and knew it. And you wonder why Hams have a bad taste in their mouth over CBers. It's bad enough that out of band operations take place on the so-called Freeband, it's another thing when "the trash" starts showing up on the Hams bands. Then they have the balls to think it's their right to be there too!!!

> Analog is now being replaced with digital transmissions, and radiowaves are
> being replaced with cable.

Were are replacing analog TV with digital here as well but the process is really draging out due to the high cost of the equiment.

> Ironic really, as "wireless" is being replaced with direct connection.

That does seem ironic since here there is a fast growing demand for all sorts of wireless services. This will only make interference more common but any yo-yo that wants to ignore the licensed frequencies for the service they use, by transmitting on non licensed frequencies will sooner or later discover the increasing attention to enforcement actions. It's the only way that all wireless services can get along. For example the FCC here has been cracking down on pirate FM radio stations across the country.

There is a Amateur fast scan TV repeater (on the 70cm band running about 35 watts PEP) located on the top of an apartment building about 3 to 4 miles from a company that manufactures wireless alarms for cars. It seems that when ever the repeater was "working" the alarm system for miles in all directions from it would malfunction. The company contacted the FCC here, which traced down the cause of the problem. It turns out the frequency selected matched to within 30KHz the carrier frequency of the video being transmitted! The FCC told the company there was nothing they could do since the Ham TV repeater was operating legally, and the company's product was licensed as a Part 15 device, which means it has to accept any interference it gets. The owner of the TV repeater had a meeting with the company's management to discuss the issue. He told me, when I asked how the meeting went, he said the chief engineer almost had a heart attack when he told them as a Ham he can legally run up to 1500 watts PEP, whereas he was only running 35 watts PEP currently. They elected to redesign their product to get it off the Ham 70cm band.

There was also another case with the same TV repeater when Chrysler was testing an in-tire air pressure sensor. It was a wireless device, and would quit working when within a few miles of the repeater. In this case the company discovered the source of the problem on their own. They contacted the repeater owner to ask some questions, like power level frequency, modulation type etc. They were happy in fact to see the sensor malfunction! It turns out they drove their test vehicle by the repeater site to test new EMI measures out!! Nothing like real world testing.

> CB seems to be stuck in a "time warp". At least our system is fairly recent,

> happening, considering the 10KHz spacing, and the way FM creates side
> frequencies all over the place (not like AM). Unless they give us a UHF slot

> to go with it.

Yeah, 10KHz is way too narrow for FSK 1200 baud packet. On FM you need about 20 to 25KHz. Our Ham VHF packet channels are spaced at 30KHZ to be safe. PSK packet does occupy less bandwidth for the same data rate compared to FSK packet. Even so 10KHz may not be enough. I would have to check to see what would be required for 1200 baud PSK. On the Ham bands here all PSK modulated packet is at 9600 baud or higher, and fits in to a little less bandwidth than the 1200 baud FSK packet does.

> Could you imagine a CB type service being added to the cable systems? Now
> that would be a system they could control.

There have been a few idiots here doing that with video already. It really messes up the cable system when they try it.

> Otherwise, all the verbal dodging and weaving just makes you look
> shifty.
>

Hey Aaron,

No verbal duck & weave from me. As to what the illustrious Mr. Pearsal
posted, I commented more re. the Frank Gorshen reference than anything
else. If you really need to have it spelled out, my entry would be
"money talks, bull$hit walks!" That's four words and two punctuation
marks, too easy.

Heck, I've bought stuff from Bill's 2 Way and never had a complaint.
If you go to Bill's site, he makes no attempt to sugar coat what he's
selling. There's a "New in the box Price" and a "Ready-2-Talk Price"
Like I referred to re. the ebay cancellation, those "in-the-know" will
recognize the key terms and/or phrases, did you miss this one, Aaron?
I gotta say, I do like that little Titan handheld, oh well. (Perhaps
the upcoming Magnum 10m h/t?) I do think that $385.00 is a bit much
for a President Lincoln, even "w/Chipswitch & 12 meter modification."
Is it still "not exactly clear," Aaron?

You know Aaron, Mayor Guiliani (Of whom I'm none too fond of.) just
returned a $10,000,000.00 check to a Saudi prince because the prince
attached a statement that was contrary to what the tragic events of
Sept. 11 represented when presenting the check. Say what you stand for
and then stand for what you say, Aaron. If Doug wants to lay down the
anti-illegal CB shop manifesto, fine...then DO IT! "Walk the walk!"

Oh, I do so love these click buttons. "Modification information, click here." Gee, they seem to be next to every CB?! And look, a sale!

$399.99 (New in the box Price)
Sept Special
No Additional Charge (Ready-2-Talk Price) <<==Very Generous, eh?
RCI-2970DX PA, FM, AM, USB, LSB, CW, FM, Offset for repeater use. Roger Beep, 10 Memory Channels, Noise Blanker, RF Gain, Microphone Gain, Clarifier, Ext Speaker jack, CW Key Jack, Signal Strength LCD Bar Graph, VSWR Meter function, Variable RF Power Out, VFO control good down to 0.1 KHz using step control from UP/Down Microphone or front panel. 2 Year Warranty, 100+ Watts. Covers 10 and 12 meters

How exciting!

Nothing against Bill's 2 Way, I've used and still own plenty of "export" and converted 10-meter rigs. Yes, I've purchased equipment from Bill too. Those days are over for me but I won't bash anybody over the head for responding to the demand. Doug's not "trolling" because it's his house, unlike rec.radio.cb and it's resident troll(s). But if he's going to take such a hardline stance and put it in writing, then DO IT! I hope this has made it a little "clearer" for you, Aaron. Take it easy.

When you are a a vet, and someone gives you the order to pull the trigger...and you have to make a choice between your ass in jail, your country, and the picture as a whole...then we can talk. Bragging, not hardly. Only the people who have been through it know what I am talking about. Also being a blackman, sometimes it was hard to serve knowing that this wonderful government that I was a hit man for is the same government that may order some national guard person to pull the trigger on me. So maybe I am not worth a shit for following orders, but that has nothing to do with my questions being valid, and I am not sitting here pulling GOD into a convo about worldly laws.

Hello Goose: Here is a treausure of CB Antenna assembly diagrams with demensions.

http://www.majestic-comm.com/assembly/index.htm

Also Look at the ARRL Antenna Book at:

http://www.arrl.org/catalog/8047/

Look at Roy's page for Antenna Molding Software, very much worth the price, and Roy is a big help with questions and such. Its at:

http://eznec.com/index.shtml

The only thing left out, is inserting getty up and go. Also suggest to listen to Rock & Roll.

Jay in the Great Mojave Desert, ... just dwon the road ah ways from the fillin station.

Afraid I'm not hip to the code words outlaws use to communicate with
each other. So "new in the box" means legal, unmodified and
"Ready-2-Talk" means illegally modified or illegal to use on CB?

>I gotta say, I do like that little Titan handheld, oh well. (Perhaps
>the upcoming Magnum 10m h/t?) I do think that $385.00 is a bit much
>for a President Lincoln, even "w/Chipswitch & 12 meter modification."

If you are saying that Bills-2-Way caters to the outlaw CB market you
are probably right.

>You know Aaron, Mayor Guiliani (Of whom I'm none too fond of.) just
>returned a $10,000,000.00 check to a Saudi prince because the prince

>and then stand for what you say, Aaron. If Doug wants to lay down the
>anti-illegal CB shop manifesto, fine...then DO IT! "Walk the walk!"

You need to be clearer. Are you inferring that Doug takes money from
Bills-2-Way in exchange for advertising or mention on his web site? Or
is this an issue of inconsistently applied principles?

>Oh, I do so love these click buttons. "Modification information,
click
>here." Gee, they seem to be next to every CB?! And look, a sale!
(detail snipped)
>Nothing against Bill's 2 Way, I've used and still own plenty of

>because it's his house, unlike rec.radio.cb and it's resident
>troll(s).

Woah, hang on here. Granted, Doug published his opinions on his own
web page. But are you saying that anyone who wants to express similar
opinions (i.e. hard line anti-illegal CB) should not do it in

rec.radio.cb or they will be considered "trolls"?

>But if he's going to take such a hardline stance and put it
>in writing, then DO IT! I hope this has made it a little "clearer"
for
>you, Aaron. Take it easy.

Actually it has raised more questions. Because Doug has paradoxically included Bills-2-Way in his list of 'approved' suppliers, does that mean you feel his opinions as a whole are insincere? How does this affect the content of his editorial? Do you disagree with his opinions? Do you think the issues he raises are less valid because of his Bills-2-Way endorsement?

-Aaron-

Hi Landshark,

Yeah, I'm kinda expecting an assault from the "foul-mouthed" alter-ego (read screen-name) for this. Oh well, that's the way the cookie crumbles. I've figured out what "spanka" means, but I'm clueless about the "dweeba" part? I agree that it's a nice website though. Yes, his heart's in the right place too. ;-p

Frank (The fellow here at work.) took delivery of his Vulcan Drifter day before yesterday. We're taking up an office collection to have the grin surgically removed from his face. :-) It's a strange looking beast, kinda retro...but definitely cool.

Aaron thinks I should pursue politics. Gee, I've got the bumper sticker thing going on already. Hmmm, what do you think? Could you see me shaking hands with one hand and kissing babies, while furthering a secret 11-meter agenda and handing out "export" rigs to the fathers with the other hand. All this, while orchestrating the takeover of Upper Muldovia. Don't mind me, I'm in a very "chipper" mood right now and feeling playful. I had a GREAT day at work. Seriously, the only RF-related things I'd do as a politician is put pressure on the FCC re. the 155 mi. limit and move to have the FCC rules and regs go through the same legislative process as any other "law." Wanna levy $7,000.00 fines?...better acquaint yourselves with the principle of "checks and balances." No more administrative courts, let's go judicial with a trial by jury. No more judge, jury, and executioner for you, Mr. H., prepare your case like any other prosecuting attorney. Wow, it's a shame that I have to sound like such a rebel by wanting a federal commission to follow some very basic principles, on which our government is founded. Politics?...no thanks, I'll leave that to the folks who are "supposed" to do that too. After all, that's why we pay 'em. ;-p

Lucky for you that you're only 'expecting' a foul mouthed assault.
I've already received several from anonymous personages as a reaction
to my opinions on this matter. The difference is that I don't infer
that you are the one posting them under another screen name. But who
know, maybe I should start thinking along those lines?

Aaron,

You leave yourself wide open, what do you really expect. I've said this time and time again, your message is good but your tactics accomplish the opposite effect. This is a public NG and nobody's forcing you to read

each

and

every

word

of

every

discussion

or

thread. Remember those words? Also, the truth is that I really couldn't care less if you, or anybody else for that matter, wants to post from ten different screen-names, accounts, or whatever else will post to the NG. I'll also say right here that NOBODY should direct profanity AT anybody else on ANY forum. That includes Train, Tim, SSB, etc., but do you see various incarnation of "free" e-mail accounts posted from dubious newsreaders assail you if make a point that they disagree with? NO! I've IM'd and exchanged e-mails with them. So Aaron, if we are wrong in thinking that you are behind ALL these dubious posts, so be it. But you've nobody to blame but yourself. Your tactics make it easy to believe. Take it easy, Aaron.

^^^ I'd try the guy with the link above. He's troubleshot radios over the
phone in some cases. Keep an eye on his site too as they're not even
rolling yet on the data entry. Lots of research has been put into this site
as far as radios, parts, etc... He's just getting ready to put more radios
on there with pricing, etc... Parts such as finals and other components on
the board are going to be on in another month or so. Great guy, does all my
radio work.

Hello Clearance:

Yes I chuckled all the way to work on that one.

Thanks for the flowers, while I was ah drivin 2 work in my 1966 Ford F250 4x4 wheel drive (Raised by Bill Strop and Co.) with the tall boy tires, listening ta Rock & Roll, I got the drivers window down, with my elbow sticken out, chewin a fresh piece of Beach Nut.

When this +10 Honey drives up next to me in a convertible. "Ut Ohoooo", I says to myself, then I realize we are listin to the same Rock & Roll Station on the radio, I says "Got Steer Horns on the Hood, Big CB Antenna on the roof, with a Big CB Radio and amp, Big Tall Boy Tires, 460 Cubes of getty up and go under the hood, Loud Rock & Roll AM & FM Stereo Radio with big speakers, got both kinds of music, and best of all babe I am the real deal.... All the rest of them guys is just BS dressed up nice and ain't got no good stuff like I got.

(Not having a lot of time at a stop light one must not diddle around)

She replies: " Love the pick up angle, stuff, and the Truck. Ta Ta" and roars off.

But I chuckled again over the reply posting, thanks.

That a boy twisty promote more illegal activity, at least the others gave him the option of a better antenna system. Once an illegal always an illegal.

1121. HR2510 Manual and *>NEW<* Chipswitch Manual FREE DOWNLOAD! PDF Format!

Newsgroup: rec.radio.cb
Date: 2001-10-12 22:37:43 UTC
From: Karl Vesterling <kjv@adelphia.net>
Message-ID: <XgKx7.1223$ab3.27001@typhoon1.gnilink.net>
Source record: 100133

Just the friendly once a month reminder for you folks out there with HR2510's or Chipswitched radios. These are provided at no charge to you.

http://hr2510.homeip.net:2510/search.html?fullpage=1&productid=HR2510&selectmain=Uniden%20Radios&selectsub=Amateur%20Radios

You'll find both manuals in there for the HR2510 and the Chipswitch.

We've totally revamped the Chipswitch manual, and it simply looks awesome. Anyone who has a chipswitch will want this manual as it's professionally laid out with easy to read charts etc... Click on the word "chipswitch" in upgrades and accessories and you'll see the link for the Chipswitch manual. The HR2510 manual is listed below the chipswitch.

I made the chipswitch manual, so if anyone has any suggestions I'm the guy to send them to.

Hi Aaron (Mark) and Dweebo Spanka (Doug) how are you losers
doing today?? I see we both still have no life eh? Still ranting here
about those nasty freebanders and federal criminals I see.

Anyway......Whatta ya suppose would happen if someone set up a web page
with one of those little programs on their server that interrogates your pc
for personal information,
you know, like your name, address and other such info, ip address etc. and
then
posted some bait for you, something that you just had to look at, to get you
to look
at it. Hmmmm. Interesting. I'll bet when you hit that site and your pc gave
up that
information, you never even knew it. Whatta dilemma. I wonder who would be
willing to pay to find out who Aaron H. Voobner REALLY is?? Do I hear an
opening bid of $1000.00 ?

Your Nightmare....Blue Blazer

1124. Nothing, really

You know, Phoneman was once offered money by some extremist keyclowns to hack my ISP and obtain my home address. At first he was gung ho, but soon he realized he would end up in jail when the evidence was traced back to him.

But to the matter at hand. $1000? You'd pay $1000? You want my address that bad??? Cripes, for $1000 *I'll* send anyone who wants it my address and phone number! Here's how we can do it:

1. Mail fifty 20 dollar bills to N8WWM (his address is on QRZ) along with a valid email contact.

2. After N8 confirms receipt of the cash I will email my address and phone number to the email contact given.

OK! Let's make it happen!

-Aaron-

Depends on which one your looking at, and how close you examine the picture... Zoom in a few times... The one on the left looks like a pretty girly figure to me... Somewhat flat chested, but girly none the less....

I took the time to crop and enhance the photo, though I'm not exactly an artist... Take a look, looks girly to me... When's the last time you saw a man with bony fingers?? Must have a pretty small "package", there's no bulge.....

Just my opinion...

P.E.P. is not as important as E.R.P., you failed to mention whether were dealing with a mobile or base station. A high gain antenna should always be the first step in building a H/P system.
More power does increase your range as long as each increase in P.E.P. is doubled.
I run a very low deadkey (2.5watts) when the footwarmer is switched on to give the 1446's
plenty of headroom. But on a barefoot rig the carrier is everything and should have preference over
modulation swing . Yes, power does matter as long as each increase is doubled 10,20,40,80,160.....

The antenna is too low at 15ft., the minimum is 1/2wavelength (16.5ft.) at
27Mhz.
I would not settle for anything lower than 30ft. (base of antenna).
Sounds like your counterpoise has dried up leaving you with little or no
ground plane causing the
SWR to climb,start with the basics Danny and build a proper counterpoise
then keep it watered.....

Equate this to over modulation.

>But on a barefoot rig the carrier is everything and
> should have preference over modulation swing .

What is the difference if the rig is barefoot ? Doesnt swing provide "headroom" as you said earlier? Why is "headroom" not important at barefoot levels?

> Yes, power does matter as long as each increase is >doubled 10,20,40,80,160.....

Hi Ken...

Your name sounds familiar.
No.. You can't be that Ken Clark... Can you??

Anyway...

View plug from inside, with notch at top (not all have pin numbers)

White (TX) = TOP RIGHT
Red (RX) = BOTTOM RIGHT
Yellow (Audio) = TOP LEFT
Shield + Black (com) = BOTTOM LEFT

Hope this helps.

If you get reports of terrible audio, then it is an older version of Jumbo,
and I can give you a www pointer to the cures.

Regards,

Brainbuster.

1141. Yours for FREE!

Hi, I'm looking for a new CB, as the one I have is probably 25 years old, it only goes up to channel 23. It needs to have a few things-

Auto scan, so it scans and stops on channels with activity

auto squelch (if they make it, it seems like they would, but this is not a must and i could live without it.)

fairly compact size

anything else people think I'd need... I haven't used CB's much, I just came accross this old one and picked up a magnetic antenna. I'd like to upgrade to something newer.

What kind of permanent antenna should I get? This is for a 4 door sedan, the smaller the better, but I don't want to sacrafice quality or range.

So, with all that, can anyone recomend a good, fairly inexpensive radio? The cheaper the better, but I would like it to have those features.

Thanks-

-Paul L

Oh come on. Just because I said to send the cash to N8WWM doesn't mean I am N8WWM. Look, you can send the $1000 to Frank Gilliland or Leland Scott, your choice, the addresses are available on QRZ or in the NG archives. I trust any of them to play fair because they are not illegal keyclowns and do not break federal laws then lie to minimize it or cover it up.

So let's get this ball rolling. Send the cash. Borrow if you have to. Think of it as an investment. An opportunity like this comes along once in a lifetime!

1150. Re: Base Antenna, Solarcon or Shakespeare?

Newsgroup: rec.radio.cb
Date: 2001-10-13 07:07:58 UTC
From: Danny Young <dyng@earthlink.net>
Message-ID: <iLRx7.13621$0Z6.1073787@newsread1.prod.itd.earthlink.net>
Source record: 100262

Okay, I picked up a new in the box Solarcon Imax-2000 today.

There were no instructions inside the box. I believe all the parts are there:
3 fiberglass sections; 2-U clamps with 4 nuts and 4 lock washers; 2 additional lock washers I presume to be placed between the fiberglass screwed-on sections.

There is a tiny weep hole at the base bottom of the antenna where the coax connector is. A labeled instruction on the antenna states not to block the weep hole in order to allow condensation inside the antenna to drain out. Strange place to place a weep hole, in the area where most people would add silicone sealant to weather protect the connection.

The u-clamps provided appears to utilize 4 nuts and 4 lock washers for each clamp. Since there were no instructions provided, I presume each leg of the clamp will require 2 nuts and lock washers or are the other 2 spares?

The sections are screwed into each other male to female with supplied lock-washer between them, no instructions, but that seems to be where the lock washers go, since they are sized perfectly for the two joints. Since the joints are exposed (e.g. no rubber cover like the old Big Stick) is it recommended to place a bead of silicone sealant at each of these two joints?

I'm going to set it up temporarily in the backyard to check swr prior to setting it up on the roof on Monday 10/15.

Mad Dog <lgsast@strato.net> wrote:

: More power does increase your range as long as each increase in P.E.P. is
: doubled.

Only to a limited extent.

11 Meters is pretty much "line of sight", although the direct wave does
go a bit over the horizon, and it is not totally blocked by low hills.

But once you get to that maximum distance (around 70-80 miles for two
ground level stations - if I remember correctly), then adding more
power (or a higher gain antenna) will not push your signal any further.

Aaron quoted Popular Wireless:
>Illegal CB amplifiers at base stations and >in mobiles can cause
>horrendous RFI in consumer electronic >devices.

So do the damn consumer electronic devices themselves!
I've got a Hammond electronic organ in the living room. Plays country music all by itself if turned on - "receiving" it from a broadcast tower 1/4 mile away!
Let's be honest here. A lot of people with RFI problems may have no idea what's causing them - particularly with some consumer electronics equipment.

Hi Mike,

For local work, it'll improve your transmitted signal. Let me change that "improve" to "extend the range of" as amplification invariably adds a level of distortion to your signal. It is a one-way street however. That is to say it does nothing for your reception. Some amps come with a preamp for receive but increase the noise level as well, not good.

For DX comms, 5 watts or 500 watts...the ionosphere doesn't care. "Conditions" (propagation) calls the shots. Take care and 73.

>Will foam last as long as solid?

Hi Danny,

The foam refers to the dielectric and the solid refers to the conductor, so you've not presented enough information on both cable for us to really help you with a comparison. However...

Solid core conductor is a good choice if you are routing it to a fixed antenna that will not rotate. A stranded center conductor is more suitable for this choice as it is more easily flexed.

As to your dielectric, there is a plethora of choices out there and foam is certainly a good choice. I hope this has been of some help to you. Take care and 73.

You'd really like to get up here on my mountain Bill. You would be amazed
what some altitude will do for you. Overlooking NYC from 28 miles away I can
put S9+ out to Riverhead on Long Island running just a 4 pill from the
Explorer. Just ask aroung Ch. 11 about Night Train or 13 and they'll tell
you about the top of the Garden.
Altitude is still king!

When I run my dot matrix printer, I suffer from severe "internal bleedover".
A cheap cure is to throw a few pillows on it :~)

> "For cb and freeband, many use 25 to 27.995 without a problem."

Wait for it...

> "There is a certain satisfaction to be had concerning long distance
> communication on FM between 25 to 27.995."

There are many British CBers who love to DX.
And we can do this both on the US CB frequencies, and on what you refer to as
"freeband".
Now don't that just p**s on someones strawberry patch.

> Could you imagine a CB type service being added to the cable systems?
> Now that would be a system they could control.
>
> "Hehehe...watch out. The saints of virtue are gonna lob some boulders at
> ya' for even suggesting such a thing."

Actually, I would expect some of the "anti" people on here would like the
Idea. If they gave such a service, amps and "freebanding" could be made
obsolite, and the distance rule could be easily enforced.

Now I know who would certainly complain about such a "Commie" run service,
taking our freedom away.

Regards,

Brainbuster.

Which is incredibly admirable as long as you are talking to other Explorers with four-pills; otherwise you are simply a boil on the butt. Get more than one of you on a channel and the noise level will be S9+.

At VHF, and 11 meters is lo-VHF, there ain't no substitute for alty-tude. Not exactly a recent discovery.

The only transceiver i know of with autoscan is a RCI2950, and the RCI Bible explains how to add
a auto-squelch feature...........
The 9ft. whip costs $20.oo at R/S and will rival most aftermarket antennas.
I cant recommend the new 2950DX for you as i own 2 old style 2950's and would not sell them
for any price..... the 2950 is not intended for the rookie because it is a high maintenance rig that
requires periodic adjustments (yearly alignment).
But the mod's are endless is youre so inclined and they sound great with a Astatic 636L mic.
These rigs sell for less than $150.oo used all day long.............
10-10 CB Friend, till we do it again..........

1176. Re: Base Antenna, Solarcon or Shakespeare?

Newsgroup: rec.radio.cb
Date: 2001-10-13 13:34:54 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3BC842FE.10D74065@qnet.com>
Source record: 100288

Hello Danny Young:

That pretty much sounds like you have it all together. I would think that Solarcon would have at least included assembly instructions. I got assembly instructions with the ones I have bought.

The I-Max 2000 uses a transformer type impedance matching device with high voltage (In seriers) capacitors, inside the base or botton section of the antenna. That is why a small drain hole is supplied, to allow moisture build up into water, to have a exit point. It the antenna fills up with water, the SWR will go nuts. I beleive the top part of the bottom section is sealed, and will hot allow a direct path for water to enter the antenna.

I wouldn't worry about applying Silcon Sealant to the threaded connection points, but would apply a finger around the threads with Ignition Silcon Grease, just ah dab will do ya. So that when the antenna is moved or sold, or burned out it can be easly taken apart.

Suggest you use a good ground and LMR-400 coax. And keep the power below the 1 KW range. Good luck.

Jay in the Mojave

>Okay, I picked up a new in the box Solarcon Imax-2000 today.

Good move! I have one and it's great! The SWR's are always flat across the band. I found an article on the internet comparing the A-99 and the Imax 2000 and while the author wasn't using any high tech equipment to do measurements, he had the two antennas at opposite ends of his ranch house and conducted tests. The Imax 2000 usually received higher "S" readings from the other stations.

A very unscientific approach, but just one view of it. I am very happy with mine and I think you will be with yours as well.

Website updated and mission statement clarified - October 13th 2001

Citizen Radio Network (CRN) - an initiative to help keep communities and neighborhoods in contact during times of distress or emergency.

http://www.angelfire.com/ma4/citizenradionet/

CRN is not an organization but a proposed method to help people help other people via radio.

1187. D104 Preamp Question....

Newsgroup: rec.radio.cb
Date: 2001-10-13 15:12:52 UTC
From: Frizz <kg4ivt@hotmail.spamsucks.leaveme.alone.com>
Message-ID: <URYx7.9905$YC3.3720716@typhoon.southeast.rr.com>
Source record: 100198

I have an broken older style D104 desk mic. I would like to use the preamp inside of it for another application. However, I am clueless as to any of the connections that go to the preamp board. I have figured out several grounds and one connection for the mic head. This is the older style preamp that uses two transistors on a small, thin board that is attached to a strip of connector lugs. Here's what I have although I believe this thing may have been rewired:

Blue Wire: Left leg of pot to board
Orange Wire: Center leg of pot to board
Purple Wire: Right leg of pot to board
White wire: goes to board and is connected to clear covered mic cord wire.
Green wire: mic head connector to board
Brown wire: ground and mic head ground
I also don't have any connection for power.
Any ideas? Any help is appreciated. Thanks!

No i doubt it..and i am sure i will still freeband...I am mainly talking about these screwball idiots who think they are god just because they are ligit 40 ch only 4 watt mud ducks and anyone who does not follow the rules is a bad bad person....most hams started in cb and then went to freeband ect. :-) If you got it run it! these keyclowns as you call them need a prozac or 3 and need to get off their high horse and stop crying everytime they see an amp posted for sale or a modified rig for sale.

>Amateur radio
>is intended for those who wish to enter the technical side of radio at a
>hobby level

I agree..but most of the "freebanders" are interested in the same thing but just don't want to get the ticket... I still have no problems with anyone running a box or running out of band...the FCC needs to open up those out of band channels anyhow...from 25.005 to 27.995 anyhow and increase the power to 25 watts...I have talked world wide on 25 watts in the past..just a shame ya need the amp for LOCAL talk ...rofl

Out of pure curiousity why lmr 400 as opposed to Belden 9913? LMR 400 is a foam which which I have had terrible luck in the weather in the glorious mid-Continent and the Belden is a Class 1 PVC cable that takes burial a lot better than the polyeth of the LMR.

Both are sumbitches to put a PL259 on.

Paul,
I recommend the inexpensive Midland MOBILE 40-CHANNEL CB RADIO
Built-to-last metal housing Small in size and price but big on
performance! Features include: ETR electronic frequency tuning with
separate up/down control for pinpoint accuracy; dual-conversion
superheterodyne receiver for efficient signal amplification and
stability; full-time ANL that eliminates reception background noise;
large digital readout system with bright and dim controls;
quick-disconnect mounting bracket for easy in and out flexibility;
external speaker jack. Mounting bracket that mounts either vertically
or horizontally microphone with coil cord and clip push-to-talk bar on
microphone and DC power cord and hardware included. For 12-volt
negative-ground systems.

http://www.qksrv.net/click-749737-1524970

Hope it helps.

Rich, no one thinks they are God for following the rules laid forth to us in
all aspects of life. You can call legit users 4 watt mudducks no they are
law abiding people.

> person....most hams started in cb and then went to >freeband ect. :-) If
you got it run it!

typical criminal mentality. If you want it steal it right?

>these keyclowns as you call them need a prozac or 3 >and need to get off
their high horse and stop crying >everytime they see an amp posted for sale
or a >modified rig for sale.

And I guess all law enforcement personel should turn the other cheek when
they see someone breaking the law. Thats what this country does if we see
someone acting suspicous we call the police, we make someone aware of the
law breakers. Just ask Curtis Sliwa of the Gaurdian Angels

> I agree..but most of the "freebanders" are interested in >the same thing
but just don't want to get the ticket...

Thats like saying I want a new car but don't want to work for one so I will
just steal it.

>I still have no problems with anyone running a box or >running out of
band...the FCC needs to open up those >out of band channels anyhow...from
25.005 to 27.995

You have no problems with it because it doesnt effect you. You are not a ham
you don't care if your dirty signal on 27.995 splatters into the ham bands.
Yeah they need to open them up right just because you said so.

>anyhow and increase the power to 25 watts...I have >talked world wide on
25 watts in the past..just a shame >ya need the amp for LOCAL talk ...rofl

You advocate increasing the power from what 12 watts SSB to 25 watts well my
ignorant friend the recieving station won't notice the difference.

Hi Brainbuster,

Do they still have the "Coca-Cola" DX group in England? Or perhaps I should ask if they're still active? Made a contact with a wonderful chap about 15 yrs. ago and the quoted statement made me think of him. I think I still have the QSL around here somewhere. Thanks and take it easy.

Mark,

I'll find out the exact date from Schmitty (Paul) at work. Twistedhed, if you can make it up from FL, you're more than welcome to join us. The invite's open to all, yes I mean ALL. It's a fun weekend, but I'll warn you in advance that the weather will be much cooler in two weeks. The town of Oyster Bay has also prohibited the sale of alcoholic beverages for that weekend. (Restaurants excepted.)

Congrats Danny,

Do yourself a favor and replace the u-bolts, washers, and nuts with stainless stell examples. These can be had from any good marine supply store. It'll pay off in the long run. If you have any trouble finding stainless steel hardware, e-mail me and I'll be glad to put you in touch with the right people.

Hello Tim: Biiiiiiiithcen:

Its important to have the proper vehicle. Ah yes 66 Ford Galaxy, I'll be you do have room for 20 alternators.

The ol man bought a new 1964 Ford F-150 new off the show room floor. It was a Custom Cab, with bucket seats, and a red interior, it looked great. Had just a AM radio, and I believe a General radiotelephone MC-5? Didn't get a linear until 1969 I believe.

I told the kids at school about it, they said I was ah lying. So one day dear old Dad picked me up at school, and I showed them all. They asked the ol man if they could touch it and look it over. In 1964 it was quit a looker, whooo baby "Custom Cab" with bucket seats.

Years later Dad took out the 292 Y Block, and the 3 speed turd-o-matic on the colum, and we put in a Lincoln 430, with the automatic transmission. With a little help from Bill Strop Racing in Long Beach California. Had to replace the 411's in the rear, with 350's. That thing simply hauled the mail to downtown square big time.

(Southern California Sufer and Car Club slang, in the late 1960's, before the car clubs where called ganges)

>even though it's a 'mobile' rig, it doesn't stand up very well to extreme temperatures>
Mine has always done well in the pickup,
even on the below zero days out here in the midwest. Only problem I've seen on the 2950's is the solder connections, on the edge of the PC board, to the chassis, crack.
A simple solder up does the trick but until then receive and transmit have problems.

"If it aint broke, don't fix it"

1216. Re: Base Antenna, Solarcon or Shakespeare?

Source record: 100228

Hello Dick:

I use to use 9913, took all the power and all, even used it on VHF and UHF.

I used it on the beams and all, just used a large service loop.

I have heard that the 9913 got water in it, and have never seen water in the LMR-400. But again it only rained twice last year here in the Desert.

One big problem I have run into 2, is that the guys testing the antennas and all, some where using cheap left over RG-6 (75 ohm cable) from a trash bin.

So after 3 guys testing antennas, needed to have good coax so the testing results where pretty much the same, had cheap shit, with the braid showing and leaking water. I bought 2 1000 FT rolls of LMR-400, so when a new antenna went up for testing we had new good coax. Some guys even use the 1/2" and 5/8" Heliax coax. Which has a dead nuts constant impedance, where the LMR-400 and 9913 has some impedance tolerances.

I don't have a problem soldering on the PL-259 connectors. I also stock the silver plated, Teflon dielectric PL-259 connectors. This has saved my from numerous house calls.

If the beer intake has exceeded the work hours / IQ ratio, then the soldering ability significantly is reduced. Especially after several finley tuned cocktails, and your 50 feet up, with the wind keeping the iron just cooled off enough to make life miserable. And the guys on the ground are yelling: "Can we key down 10KW yet?!?!?!?!?"

AMATEUR RADIO NEWSLINE(tm) REPORT #1261 - OCT. 12, 2001

Amateur Radio Newsline report number 1261 with a release date of Friday, October 12th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC says “yes” to S-D-R. This story is first on Amateur Radio Newsline report number 1261 coming your way right now.

(Billboard Cart Here)

**

EMERGING TECHNOLOGY: FCC APPROVES SDR

The FCC has taken the first steps in making Software Defined Radio or S-D-R a household word. This, as the regulatory agency adopts rules changes to authorize and begin deployment for a new generation of two way radio gear. Amateur Radio Newsline’s Bruce Tennant, K6PZW has more:

--

The Action took place on Friday September 14th at an open meeting in Washington D-C but the announcement was all but lost in the events occurring in New York City and the Pentagon only three days earlier. But what’s important is that this First Report and Order removes many barriers to entry of Software Defined Radio enabled products to the marketplace. And the new rules do allow manufacturers and operators of such devices to reconfigure them after they have been deployed in the field -- including -- possibly -- ham radio gear. This, says the FCC. will speed up the introduction of advanced technology and new services.

The new rules say that software modifications to an S-D-R can be made through what the FCC calls permissive change. The FCC describes this as a totally new form of filing process where the FCC identification number will not have to be changed nor will the equipment have to be relabeled each time its purpose is revised. In fact, the FCC says that it will permit use of an optional electronic label for S-D-R gear in which the FCC identification number could be displayed using a liquid crystal or similar screen. This will allow another party to obtain an equipment approval in its name and take over responsibility for compliance with operating rules that were the domain of the previous licensee.

The Commission has also adopted requirements saying that the license grant holder must take adequate steps to prevent the unauthorized software modification to S-D-R gear. But so far it has not set up any specific security requirements.

In Los Angeles, I’m Bruce Tennant, K6PZW, for the Amateur Radio Newsline.

--

More information on Software Defined Radio is on the web at several locations. The subscription S-D-R forum is the best. Its in cyberspace at www. sdrforum.org (W5YI Report, SDR Website, ARNewsline(tm))

**

AMERICA UNDER ATTACK: SATERN SAYS HAM HELP STILL NEEDED IN NYC

The last federal rescue crew left the World Trade Center disaster scene on Saturday, October 6th leaving New York officials to continue the nearly month-old effort to locate nearly 5,000 bodies buried in the rubble. The Urban Search and Rescue Task Force was the last of 20 Federal Emergency Management Agency teams sent in after the September 11 terrorist attacks that collapsed the twin towers, but their departure does not mean work is winding down. In fact, one volunteer agency says that ham radio operators will still be needed there for some time. Amateur Radio Newsline’s Henry Feinberg reports from near the scene.

--

Its the Salvation Army that needs radio operators to support the organization's World Trade Center relief operation in New York City. And even though it has cut one shift of radio operators the relief agency says that it still needs fresh Amateur Radio ham operators on a daily basis until further notice.

In a statement to the ARRL Letter, Jeff Schneller, N2HPO who is coordinating the Salvation Army Team Emergency Response or SATERN Network says that he is still short of people. Schneller says that the midnight to 8 AM shift has been suspended but they still needs six Amateur Radio operators per shift -- a total of 12 per day -- for the indefinite future.

SATERN needs these operators with their own base station radio gear at the Kennedy Airport warehouse set up from about 8 AM until about 9 PM -- possibly broken into shifts. SATERN also needs operators to ride with trucks to provide communication. If you can help, please visit http://www.satern.org for the latest information.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ, 15 miles from ‘ground zero’ in West Orange New Jersey.

--

The Salvation Army said it's sending additional personnel from the Midwest to New York City to assist those who have been on duty since September 11th. In the area of ham radio, so far some 40 Amateur Radio operators have turned out to help support the Salvation Army relief effort with some coming from as far away as Missouri, North Carolina, Georgia and Florida. (ARRL, SATERN, published news reports)

**

AMERICA UNDER ATTACK: TERRORISM ATTACK CUES EAS DEBATE

When should the nations Emergency Alert System or E-A-S be activated? According to the trade publication Radio World, experts are debating that question because the E-A-S was not used following the September 11th terrorist attacks on New York's World Trade Center and the Pentagon.

Richard Rudman, W6TIA, is the chairman of the Emergency Alert System National Advisory Committee. He also chairs the Los Angeles County local E-A-S group. Rudman says that since the incidents that the national committee has recommended to the FCC that changes be made if a similar attack takes place again.

--

Richard Rudman W6TIA: "The Emergency Alert System -- at the local level -- ties into local emergency management. What I am suggesting is that we have to look at the elements of the critical infrastructure that might possibly have warnings based on the current threat and make sure that they are tired into local emergency management properly so that a decision can be made to issue an E-A-S warning if it is appropriate."

--

The question of whether an E-A-S civil warning should have been triggered has stirred strong debate among those subscribed to an on-line discussion remailer. Rudman says that the job of the E-A-S is to alert the public before an actual event occurs, rather than after the fact. He says that with the immediate live media coverage of the strikes on the two locations that the need for an E-A-S warning was lessened.

--

Richard Rudman W6TIA: "First of all, there wasn't enough information to give a clear warning of what was going on. You might as well have just put out an E-A-S message with one word -- 'panic.'"

"At the time that you get a warning you really have to have other information. I often say that our job -- quite often -- is to take people from the fear of the unknown to fear of the known. If you don't do that right, all you are doing is confusing people and possibly instilling panic."

--

Not everyone agrees. Radio World reports some speculation that there was enough time between the two plane crashes in New York that issuing an E-A-S alert might have saved additional lives.

The E-A-S was developed in 1994 to replace the then aging Emergency Broadcast System as a tool for the President of the United States and others to warn the public about emergency situations. But President George W. Bush chose instead to go directly to the mass media and did not issue an Emergency Alert Notification on the day of the terrorist attacks. As a result, E-A-S played no role in alerting the public to the emergency situations. (Radio World)

AMERICA UNDER ATTACK: REPEAL THE ECPA SO AMATEURS CAN MONITOR FOR TERRORISTS

A Michigan ham says its time for congress to repeal the Electronic Communications Privacy Act and lest SWL's monitor the cellular frequencies foe terrorist activities. Lloyd Ellsworth, NE8I, is circulating a letter to congress on the VHF Reflector that says the events of September 11th warrant giving the public the ability to again monitor cellular communications and report possible threats to the nations security onto authorities.

--

Lloyd Ellsworth NE8I: "If you have an area [of spectrum] -- for example 800 to 900 MHz -- where cellphones operate -- a terrorist could also conveniently operate there and not easily be caught. You would have someone specialized who had that [monitoring] equipment to receive him."

--

As Ellsworth's letter notes, the Electronic Communications Privacy Act forbids Americans from using a radio scanner receiver other device from eavesdropping cell phone and certain other radio communications. It also forbids the importation or sale in the country of equipment capable of interception of these signals. But says Ellsworth, these are tools and skills which any knowledgeable terrorist can easily use against America and Americans. And we all know that terrorists don't play by the rules.

--

Lloyd Ellsworth NE8I: "What I am concerned with is if a terrorist is able to freely operate and stands a very small chance of being caught while conducting some communications in that band -- they will."
--

Ellsworth says that repealing the E-C-P-A will even the playing field by giving law abiding Americans a way to listen for suspicious cellular phone calls or other radio signals that can be reported directly to an appropriate agency. Ellsworth notes that this would allow the average citizen, including police and law enforcement to directly to contribute fighting terrorism. Ellsworth adds that this would also put any terrorist on notice that any radio communications he or she may use is likely to be detected, intercepted and used against them. (ARNewsline(tm))

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the Radio Club of El Cajon serving El Cajon California.

(5 sec pause here)

**

ENFORCEMENT: WARNING TO FISHERMEN GETS THEM OFF TWO METERS

It appears as if a warning letter was enough to get at least four ham fishing enthusiasts off of the two meter band. This, according to FCC Special Counsel Riley Hollingsworth who says that he has spoken with some of them and those operators are gone:

--
Riley Hollingsworth: “We had warned eight commercial fisherman in Alaska about operating on two meters without a license on the fishing vessel Evack and the fishing vessel Phoenix. Now four of these fishermen have called us or been in touch with us and apparently in addition to Marine equipment they were using amateur 2 meter handie-talkies. They have assured us that they have stopped using the [Amateur] equipment and our independent information indicates that too.”.
--

Hollingsworth says that his office is still waiting to hear from the other remaining radio users. (FCC, RAIN)

**

ENFORCEMENT: DON’T USE HAM GEAR WHILE HUNTING IF YOU ARE NOT A HAM

Fishing vessels are not the only unlicensed users showing up on the ham bands. In many areas it hunting season, and some of those on the prowl using amateur radio are not hams. The FCC’s Hollingsworth says that the agency has now warned four hunters in West Virginia about using unlicensed amateur gear while out hunting. (FCC, RAIN)

**

ENFORCEMENT: VK JAMMER FINED $3000 (AU)

The United States is not the only place bringing radio regulatory violators to justice. Q- News reports that the Australian Communications Authority has successfully prosecuted a man who cost a courier company an estimated $80,000 when he interfered with its two-way radio system.

In an all to familiar scenario here in the United States, the man who is an ex-employee of the company, played music over the two-way channel when the company was trying to pass on information to its drivers. Prosecution came after a long investigation by the Australian Communications Authority which direction finding equipment to track down the offender. He was fined $3000 after pleading guilty in Sydney's Downing Center Local Court to three charges of operating a radio transmitter without a license.

The Australian Communications Authority New South Wales Compliance Team Manager is Tony George. He says that the A-C-A works hard to detect unauthorized operation of radio transmitters. George added that the agency will act quickly to prosecute offenders. (Q-News, ACA)

**

RESCUE RADIO: HAMS CALLED OUT AFTER TEXAS BRIDGE COLLAPSE

Ham radio was called out after disaster struck in South Texas early on the morning of September 15th. This, after a 240-foot section of the Queen Isabella Causeway between South Padre Island and Port Isabel, Texas, collapsed after barges slammed into the bridge supports.

The mishap sent several vehicles plummeting into the water 80 feet below and claimed 11 lives. The Texas Department of Public Safety contacted John Teer, AK5Z, to request Amateur Radio assistance with communications, because all phone lines between South Padre Island and the mainland had been severed.

The ARRL Letter reports that Teer was able to get volunteers to place at the both the South Padre Island and the Port Isabell Emergency Operations Centers. The Department of Public Safety provided boat transportation to the Island for one operator. The hams then provided 2-meter communication for government and Red Cross officials on for two days until landline telephone and cellular service could be restored. Volunteering their services along with Teer were Pat Patterson, N5SLI, Virginia Scarth, KC5SAM, Ed Scarth, W8AHU, and Gregg Sargent, KAZ0ARS. (ARRL)

**

EMERGENCY COMMS: CELL PHONE LOCATOR DELAYED TO DEC 2005

People waiting for the cellular telephone industry to institute automatic emergency locating technology will have to wait some more. This, after the FCC gives some of the nation's largest mobile phone carriers more time to develop technology that allows emergency personnel to quickly locate callers who dial 911 from wireless phones.

ATT Wireleess, Cingular, Nextel, Sprint and Verizon had sought implementation schedule delays based on problems in obtaining the needed equipment from suppliers. The Federal Communications Commission mandated back in 1996 that all cellular phone companies have some location equipment in place and operational by 2002. Its now been pushed back to December 31st 2005. A similar delay was granted to VoiceStream last year. (Published news reports)

**

RADIO RULES: ANOTHER MASS CORES CONVERSION COMING

The ARRL Letter says that before the switchover to the new and mandatory Commission Registration System on December 3rd, the FCC plans to do a mass conversion from its current Universal Licensing System database.

The FCC established the Commission Registration System or CORES last year and has been in the process of implementing it. Once it becomes mandatory, everyone doing business with the FCC -- licensed or not -- must obtain and use a 10-digit F-C-C Registration Number -- or F-R-N.

The FCC calls the move is a first step toward streamlining fee collection and tracking. Many amateurs registered with the current Universal Licensing System were assigned an F-R-N by CORES in a mass conversion last year. Those who got one were notified by mail. (ARRL, FCC)

**

CONVENTIONS: DARA SAYS PLAN EARLY FOR HAMVENTION 2001

The Dayton Amateur Radio Association says that you should plan now to attend the 51st annual Dayton Hamvention. We have this report on the very special reasons why.

--
Dayton Hamvention 2002 is slated for next May 17 to the 19th. And in keeping with President Bush’s call for America to return to business as usual, the planners of the world's largest amateur radio gathering and trade show have sent out an early flyer. A flyer that tells everyone that the show will go on and that it will be bigger and better than ever before.

How do you make the best even better? How about the Hamvention’s new “All You Can Ride Option” advance purchase package. For a $3 additional fee over the price of a normal $17 advance purchase ticket price, show attendees can ride to and from the HARA Arena an unlimited number of times. If you wait till you get to Dayton it will cost you $22 not including bus service. Buying last minute bus rides will cost another $2 a day or $5 for the weekend. So the $3 in advance is quite a deal.

But that’s not all. If you post mark your ticket order before November 10th, you will also receive a limited edition Hamvention 2002 souvenir program. These normally sell an additional $5 at the door. And early reservations also get entered into the new Hamvention Gift Certificate Contest. Here, two ticket holders will be randomly picked to receive a $250 gift certificate redeemable for cash at Hamvention 2002.

For more information write to the Dayton Hamvention, Post Office Box 964, Dayton Ohio 45401. Or you can visit the Hamvention website at www.hamvention.org.

For the Amateur Radio Newsline, I’m Rick Johnson, KA9VZD.

--

Amateur Radio Newsline is already at work planning the Ham Radio Town Meeting for Hamvention 2002. Details on this in an upcoming newscast. (DARA)

**

CONVENTIONS: ELECTRONIC EQUIPMENT EXPO

Don't forget about the annual Electronic Equipment Expo, which has moved to Seattle from Bellevue this year. The dates are October 24th & 25th at the Stadium Exhibition Center in Seattle Washington and admission is free. The event is co-sponsored by Society of Broadcast Engineers Chapter 16. More information and online registration is at www.emexpo.org. (Portland SBE Newsletter)

**

HAM RADIO BUSNESS: THE HAM RADIO MARKETPLACE.COM

The Ham Radio Market located at is an Internet web board focused on radio equipment and "Ham Radio Stuff". According to President and Founder Bob

Hutchinson, N5CNN, it is operated as a public service for the ham radio community by the Wireless Industry Association which does not itself buy or sell anything. For more information visit http://hamradiomarket.com on the word wide web. (VHF Reflector)

ARNEWSLINE(tm) SUPPORT FUND UPDATE: ARNEWSLINE(tm) IS NOW A 501(C)(3) NOT FOR PROFIT CORPORATION

Ladies and gentlemen, with a long awaited announcement, here is Amateur Radio Newsline Support Fund Administrator, Andy Jarema, N6TCQ:

--

Just about a month ago I recorded an announcement similar to this. It was to be aired on newscast number 1257 which went to air on September 14th. After the events of September 11th, I felt it was best to delay a few weeks. As this is good news, I really do not want to hold off any longer.

Over the past two years we have all been working to bring Amateur Radio Newsline out from its old Westlink Radio Network identity and into its own individuality. This meant several things including a subtle name change, branding of our new name and revamping our website. It also meant becoming a self sustaining not for profit corporation. I am delighted to report that last goal has now been achieved.

Earlier this year, Amateur Radio Newsline Inc. was granted status as a California non-profit corporation. Then, in late August the I-R-S granted our petition and the Amateur Radio Newsline, Inc. became a Federal 501 (c)(3) tax exempt not for profit corporation. Yes, that’s right, as of August 20th, Newsline, as the programming arm of the old Westlink Radio Network is officially gone and the Amateur Radio Newsline as an entity unto itself came into being.

All of this was made possible by a generous donation from a Newsline supporter and benefactor who we are not at liberty to name. But it was that person to whom we at the Amateur Radio Newsline owe a deep debt of gratitude. So we pause a moment and say thank you. Thank your for helping make a dream of almost a quarter of a century become a reality.

We also want to thank the wonderful folks at the Holmsburg Amateur Radio Club in Pennsylvania under whose not-for-profit charter we have operated since incorporating as the Westlink Amateur Radio Network in the 1980’s. They are the people who said to us -- here is a place to start. They have been an

ardent supporter of what we do almost since we began our newscasts in the 1970’s. We will always consider them as being an important part of the Amateur Radio Newsline family.

Our final note this week. Just a reminder that the address for the Amateur Radio Newsline Support Fund still is PO Box 660937, Arcadia, CA 91066. If you missed it, don’t worry. It will be given again at the end of this week's newscast. For the Amateur Radio Newsline Support Fund report, I’m Andy Jarema, N6TCQ.

--

On behalf of everyone involved in the Amateur Radio Newsline, a big thank you to Andy and to our secret contributor for making it all happen. (ARNewsline(tm) Support Fund)

**

T-HUNTING: THE OWLS ARE BACK

Its fall and that means its migration time for numerous species. That includes that ever elusive Burrowing Owls. Here’s Joe Moell, K0OV, with the latest.

--
The fall 2001 migration period for Burrowing owls is beginning right now. Once again, Amateur Radio operators and VHF monitoring enthusiasts are being asked to help researchers study the patterns of this diminishing species. In addition to owls from the plains of Saskatchewan and Alberta, which hams have listened for since 1998, we're now being asked to monitor for 30 owls that were tagged near Moses Lake in eastern Washington state. Vicki Garcia of the University of Arizona wants our help, because it is uncertain if these birds spend the winter in California, or Baja California, or they go eastward to Nevada, Arizona, New Mexico or even to Texas.

The Canadian owl tags are in the 172 MHz range, while the Washington owl tags are near 150 MHz. If you live in a central state from North Dakota to Texas, or in any state to the west of that line, and you have sensitive monitoring equipment for these frequencies, your help is needed. For all the frequencies and monitoring information, go to my Web site, www.homingin.com. HomingIn is one word.

If you aren't on the Web, send e-mail to owls@homingin.com or postal mail to my callbook address. Again, that website is www.homingin.com

Thanks in advance for your help. From southern California, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline

--

If you missed any of that, simply take your web browser to www.homingin.com. (K0OV)

**

NAMES IN THE NEWS: AMSAT-NA ANNOUNCES BOD ELECTION RESULTS

Some names in the news. This as AMSAT North America announces the results of its recent Board of Directors election. Barry Baines, WD4ASW, Dick Daniels, W4PUJ, Robin Haighton, VE3FRH, and Bill Tynan, W3XO, will retain their seats on the Board for the next two years. Bruce Paige, KK5DO is the first alternate and Dick Hambly, W2GPS is the second alternate. Paige and Hambly will serve until the next election. (ARRL, AMSAT-NA, others)

**

NET OPERATIONS: NEW NORTH TEXAS 222 MHZ NET

Dave Duval, K5UGM, in Dallas says that local hams are trying to start a new North Texas 222 MHz Net. They are also looking for station to check-in. The net operates on 222.105 MHz on Friday nights at 8 Central Time. If you think you can make the path, Bill says that the net will be listening for you. (VHF Reflector)

**

DX

In D-X, word that the same crew that aired 5U2K, 5U3T and 5U5A in March of 2001 will go back to Niger in January and February of 2002. This for a 2 week DXpedition with a larger crew that will include 3 to 4 new operators from Italy and the United States. At least 3 stations will be put on air with special attention paid to 80 and 160 meters. Overall operations will take place on 160 through 10 meters on CW, SSB, RTTY, PSK 31. Another station on 6 meters will operate CW and SSB. Callsigns will be announced at a later date.

Also, the electronic logbook is now on-line for the August 3rd tro the 5th K3L and National Lighthouse Weekend operation from Annapolis, Maryland. Stations who worked the AM Expedition to Thomas Point Lighthouse in the Chesapeake Bay can now check whether they made it to the official logbook. A photographic QSL certificate will soon be available. The QSL manager and other details are now posted at www.amfone.net/K3L. (Various DX sources)

**

THAT FINAL ITEM: HAM RADIO VS. A RUNAWAY BLIMP

And finally this week, what do you do if a blimp gets away? The answer. Call out ham radio. Amateur Radio Newsline's David Black, KB4KCH has the high flying details.

--

For members of the North Central Missouri Skywarn team…weather spotting means being on the lookout for hail, wall clouds and other severe weather…but the night of September 7th brought a situation they won’t forget anytime soon. Severe
thunderstorms were moving through the Kansas City area that evening, keeping amateur
radio Skywarn groups busy, assisting the National Weather Service. In the town of Trenton,
Glenn Briggs, KB0RPJ, was serving as Net Control for his spotters when heard a

request he didn’t believe at first.

--
IN We were discussing the squall line
OUT find it for them.
--

The blimp belonged to MetLife and had been parked at Kansas City’s Airport. It was scheduled for aerial photography during the following day’s Kansas City Chief’s football game. But mother nature had other plans for this airship as Briggs found out.

--
IN The t’ storms went thru and as it was moored at the downtown airport
OUT flying thru the air
--

For Briggs and his fellow hams, spotting suddenly brought forth a new challenge.

--
IN it was kind of interesting to try to look at the ..
OUT hit by a blimp
--

The blimp was in the air, flying out of control, for at least 45 minutes. The next task was to find it. Briggs says hams started a blimp watch.

--
IN We had begun sending hams out to try to track a NE trajectory
OUT land on a truck
--

A team of amateur radio spotters went to the scene and confirmed that blimp had been found. The crash site was a farm in the community of Chillicothe--that’s about 85 miles northeast of the Kansas City airport. The blimp fell to earth after its self deflation system activated. No one was injured. Members of the Skywarn team assisted with notifying the FAA and other officials in Kansas City. For Glenn Briggs and his fellow North Central Missouri Skywarn team members,
September 7th is a night to remember.

--
IN I would say it’s the most unusual
OUT our spotters will remember for years to come
--

Future weather spotting nets will undoubtedly include the usual…hail, high winds,
maybe even tornadoes. But at least one Skywarn team has the additional experience
of blimp spotting.

From Birmingham, Alabama, I’m David Black, KB4KCH, reporting for the Amateur Radio Newsline(tm).

--

And what else is there to say? (ARNewsline(tm))

**

NEWSCAST CLOSE

Will do Train,

I used to be able to spit at the GWB, well not really. I lived just outside of Teterboro. (Close enough.) I read your post about "altitude" and as soon as I get my gear up and running, I'll be looking out for that S9 signal. Take care and 73.

You are confusing RMS and PEP power levels. An AM 100% modulated signal at 4 watts RMS is 16 PEP; take out the carrier and a 12 watt SSB signal is equivalent. So the equivalent of 25 watts of Ancient Modulation is 75 PEP of SSB.

RMS (root mean squared) essentially measures AC in a way that makes the heating effect of AC and DC equivalent.

PEP or Peak Envelope Power is the only feasible way to measure SSB although peak-reading meters are often used to fake out neophytes and people more interested in meter-reading than communication.

Doubling power is 3 db. What he is advocating is a factor of 5 which is about 5 dead birds or one S unit roughly. It will slightly more than double transmit range if you live in western Kansas or North Dakota. For DX it is basically irrelevant.

It sure was nice to have 600+ watts to talk to Australia from my mobile. I
don't think he would have heard me with 12. The local bases couldn't make it.

No one to this day has a real clue about what an Sunit is. In theory it should be 6 dead birds but 5 always was a better guess.

All that they are doing is using a moving vane meter (read el cheapo supremo) on the AGC buss. Cheap meters read logarithmically so it is more or less correct but no one calibrates them or for that matter knows what signal level should produce S-9.

Same trick with your gas guage: they use a variable resistor cut anti-logarithmically to fake out the cheap meter. No great wonder they are approximate at best, particularly with the smoothing circuitry to keep them from bouncing all over hell as you go up and down hills. Some Fords take 15 minutes to fully realize that you just filled the tank.

There are conditions where power is of some interest to be sure,
particularly when conditions are marginal which they rarely are on 27 MHz.

Other than pure luck there are some other reasons that might have gotten you
recognized. I would suspect you were not pumping crappy audio, you have
been around long enough to have some idea of how to get the attention of a
DX station, and quarter-wave verticals are surprisingly good DX antennas.

But adding power is the last thing you do after a very long list of station
improvements is exhausted. If power is the only difference, the bean-cooker
will win; RCA Globecom etc did not pump 10-25+ kw for nothing. But I would
suspect that you have pretty well shot the list.

Out of curiousity, what was the Oz station running?

Rich, for starters 1 db is barely noticable to the human ear, secondly a doubling of the power is 3db, 4x the power is 6db, depending on the calibration of meter 1 s unit is said to be 5-6 db, so a doubling of power is slightly a whiskers movement on the meter and unintelligable on the rx end to the human ear.

> foam and solid for use on a new antenna installation, will only use one.
> Will foam last as long as solid?

No. Foam sucks. You have to replace it three times as often as a solid
dielectric. The foam allows humidity to damage your cable much easier,
and softens with mild heat (foam inside a car sitting in the sun will
frequently soften to the point of shorting out the coax). The foam can
be permanently damaged by handling that will not harm solid poly. Because
foam melts so easily, solder-type connectors should not be used, which
is a major drawback of foam.

If you want a good, solid, reliable transmission line that you won't
need to replace anytime soon, use the solid and some good solder-type
connectors.

> >is intended for those who wish to enter the technical side of radio at a
> >hobby level
>
> I agree..but most of the "freebanders" are interested in the same thing but
> just don't want to get the ticket...

Why?

Seriously, why do these people think that the slight bit of effort that
is needed to get a license is just too high of a price? Why will they
spend hundreds or thousands of dollars on equipment, but can't find
the pocket change for a ticket? Is it the test? I have never heard of
anyone failing the tech test, so it can't be -that- hard. And there is
way more spectrum available to hams than there is in the "freeband", so
that can't be the reason. It can't be the people, since so many hams
were once freebanders themselves.

So what's the appeal? Is it that they -want- to be irresponsible? Is
the responsibility too much of a burden? Or do they actually enjoy the
they use to avoid the obvious benefits of legal operation? Maybe it is
the on-air activities, such as "keydowns". I played "king-of-the-hill"
when I was a small child, and I can still play it today if I want, but
I don't get a thrill by jamming someone else's conversation. Is that
what it's all about? Who has the loudest voice? The RF dragrace?

Or maybe it's about breaking rules. Are these people so pissed off at
society that they are just breaking laws for the fun of it? There hasn't
been much effort to -change- the laws, but there sure it a lot of effort
to break them. So is there a thrill to be had by laughing at your own
country, the country that gives you more freedoms than any other country
in the world? Aren't those freedoms enough? Because everyone knows that

restrictions are only created when freedoms are abused. Does that mean the "freebanders" really want MORE laws?

Rich, I'm serious. Why is illegal operation so appealing to you? I can't see any reasonable excuse for it, but maybe I have missed something. Can you shed some light my way?

you can get the replacement battery at radio shack,also you can get the self adhesive battery holder there as well.you unsolder the original battery from the circuit board(being extremely careful not to damage the hair thin traces)and solder the wires from the holder into the circuit. then you simply stick the self adhesive holder to the radio case.next time the battery goes dead you can quickly change batteries. elpasogunslinger

In this theoretical situation I can predict with utter certainty that
the keyclown response would be:

"There isn't any air attack that's just BS"
"The FCC controls the airwaves not the government"
"They are talking about hams not CB"
"Nobody cares if we transmit"

Keyclowns would keep operating, you can bet on it.

Hello All: Need a little help here.

Did the Pride DX300 or Pride DX-1000, or any other type models have 2 each 4CX250 or 4CX350 Tetrote Tubes.

I am of the opinion one of the models had 2 of the Ceramic tubes, yes / no.
Or was there a mod that installed the secong 4CX250 or 4CX350 tube?????

Thanks for any help. Big discussion going on locally.

Damfino but there is no good reason it couldn't be done. There is enough
drive available for two in parallel in AB1.

Now I'm really confused. If 'CB Web' covertly promotes or just "looks
the other way" regarding illegal CB then you should be happy - because
you share the same philosophy, right? There are lots of regular
posters in here who say they do not approve of illegal operation yet
they cheer on keydown competitors and defend freebanders. Are they
hypocrites too? Or are they just the "good" kind of hypocrites, the
ones you approve of?

Bert
I went to the local marine supply on Saturday, they didn't have the right size u-clamps in stock. I did picked up all the nuts and washers though. I think I'll try another store on Sunday. Monday the antenna goes up and replaces the old Big Stick, couple of guys coming over to help hoist it up.

Only partly correct. You can get coax with either foam or solid dielectric.
Because they are different densities, they have different propogation
factors.

He was not talking about the conductor - which is solid, not stranded, in
most commonly used consumer coax.

Oh yes I did that expressly to oppress free speech and subvert the
rights of pickup truck drivers everywhere. (kidding!)

> I perused ebay this morning and found other CBs
> modified to extend into the 10-meter band, nary a word on those?

Maybe those are still being reviewed by eBay. Were they advertised as
"CB" equipment? If so, how could they be used legally by non-hams? If
they were intended for hams, why were they in the "CB" section of
eBay?

> I'm
> merely plainly stating the facts, much like yourself re. Part 95

Well if an individual advises people to use deception to get around
FCC rules and eBay policy in order to sell illegally modified CB
equipment then I would have to say they are condoning illegality.

1278. Test Eqipment Make Offer - CONAR

Newsgroup: rec.radio.cb
Date: 2001-10-14 08:53:13 UTC
From: Power House <MyEmail@PrivateBox.NET>
Message-ID: <tsiklq37idt27c@corp.supernews.com>
Source record: 100190

I have two units that appear to be in mint to near mint condition. One is the Conar Model 214 Transistor Tester, and the other is the Conar Model 212, which is a Volt/Ohm meter. I'm not real familiar with what type of application these would be used in, but they are VERY heavy duty. Perhaps they were kits?? They both have very large meters (7-1/8" diagonal), and are constructed of fairly thick steel. Both units measure 10-7/8" X 4-3/4" X 7".

Volt/Ohm meter has four knobs and two switches:

Range selector with ranges of: 1.2V/X1, 3V/X10, 12V/X100, 30V/X1K, 120V/X10K, 300V/X100K, 1200V/X1MEG
Mode Selector with: AC, DC, Ohms
Smaller knob just labeled "ZERO"; another smaller knob labeled OHMS.
Switch with Normal/Reverse settings, and another switch labeled ON/OFF.
Unit has two leads coming out of it, one thick (RG 62A/U) with what almost looks like a probe, and one thinner with an alligator clip
Unit has three holes in the bottom of the cabinet for what I would believe to be calibration, labeled AC, BAL, and DC

Transistor Tester has four knobs:

One: PNP/P-CH, OFF, NPN/N-CH
Other: GATE, Gm, Gm ZERO, IDSS (maybe LDSS??), LEAKAGE, BETA CAL, BETA
Smaller knob: BETA CAL; and other smaller knob: Gm ZERO
Has three leads coming out (red, black, green), all three with insulated alligator clips.

I'm looking for offers on these units, as I have no idea what there value is. I would expect a decent amount for them, as they appear to be rather high quality units, though I could be wrong... Any legit offers can be posted to the newsgroup, or via email to: Power__House@_MY_hotmail.com (Please remove "_MY_" to reply)

Thanks for looking , and I look forward to getting these thing out of the storage box and into a home where they can actually be used (or collected, whatever your preference)...

Pictures of the units are in the works, and can be requested if you like...

1279. interference from the users of CB radio equipment - intruders on VHF and UHF satellite bands

Newsgroup: rec.radio.cb
Date: 2001-10-14 08:54:43 UTC
From: "Leland C. Scott" <Twistedhed-abuse@cotse.com>
Message-ID: <npcy7.17236$Gd6.399201@typhoon.mw.mediaone.net>
Source record: 100191

==>IARU REGION 2 CONFERENCE CONCLUDES

The International Amateur Radio Union, Region 2, held its 14th General Assembly in Guatemala City, October 1-5. Twenty-one IARU member-societies from throughout the Americas were represented.

Heading the ARRL delegation was President Jim Haynie, W5JBP. He was assisted by First Vice President Joel Harrison, W5ZN, and staff members David Sumner, K1ZZ, Paul Rinaldo, W4RI, and Jon Siverling, WB3ERA.

Among other actions, the conference:

* Asked the IARU Administrative Council to study other ways to reduce interference from the users of CB radio equipment, particularly in the 10 and 12 meter bands.

* Expressed concern about unauthorized operation in the amateur VHF and UHF bands and encouraged member-societies to take appropriate action, particularly against continuing commercial interference to amateur satellite uplinks in the 2-meter band.

==>AMSAT-NA SYMPOSIUM DRAWS A CROWD IN ATLANTA

Amateur Radio satellite enthusiasts from around the US--and a few from abroad--converged in Atlanta October 5-8 for the 19th AMSAT-NA Symposium and Annual Meeting. The event attracted approximately 150 amateurs, who heard presentations on a wide range of amateur satellite-related topics.

The problem of interference from non-amateur intruders on VHF and UHF satellite bands was a topic raised in more than one forum during the weekend. The majority of the interference--particularly on 2 meters--has been blamed on taxicab operations in Mexico. "This particular source is Mexico," Soifer said. "It's been pretty well documented." Some conference participants said individuals using amateur gear as a personal communication service also are to blame.

Soifer, who chaired a VHF-UHF committee during the just-completed International Amateur Radio Union Region 2 Conference in Guatemala, said the issue got "quite a bit of attention" during conference. He advised a "use it or lose it" approach to combating interference. All agreed that reporting any intruders promptly to the IARU Monitoring System <bprice@arrl.org> would be beneficial.

During the Symposium's IARU forum, Soifer reported that Region 2 IARU member-societies were urged to report such interference to their national administrations. In Mexico, complaints already have been registered with

COFETEL--the Mexican Federal Telecommunications Commission--and AMSAT has been prompting the amateur community to report such interference when they monitor it. "The idea is to keep the pressure up on Mexico," Soifer said.

AMSAT Treasurer Art Feller, W4ART, agreed. "The more noise that gets made . . . the more likely it is to get attention," he said. "So, report, report, report!"

IARU Satellite Adviser Hans van de Groenendaal, ZS6AKV, said keeping the bands active and reporting and documenting intruders help to keep interference away and lessen demands on amateur spectrum. "It adds to the ammunition that the IARU can use at the various conferences," he said.

1283. Re: Linear Amp Question please:

Newsgroup: rec.radio.cb
Date: 2001-10-14 11:45:20 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3BC97AD0.43303D80@qnet.com>
Source record: 100195

Hello Dick: Yes thanks for the input there, I am sure there is plenty enough drive to run two 4CX250 or 4CX350 tubes.

The argument is, was that one of these Linear Amplifiers used two each of the tubes, and I was told that both amps only used one 4CX250 tube. After finding my files of manuals, I see I was wrong. I may have got wrapped around the axle the wrong way, thinking that the DX-1000 had two tubes, in order to be called a DX-1000, its just has a input circuit that attenuates the input drive level so that a 100 watt transceiver can safely drive just "One" of the 4CX250B tubes.

Any way the hearted argument on the air last night somehow got shifted to coax, and mobile antennas so they were gonna take somebody's antenna down at 9 o'clock (at night time when things are dark!) and measure the insertion loss, and go do field strength testing ..... thought I was nuts, ah? I am sure I'll hear of all the Hoo Raw in the morning when the boys are waking up in a few hours, don't ya just love it!

>Oh yes I did that expressly to oppress free speech and subvert the
>rights of pickup truck drivers everywhere. (kidding!)

Got it. :-)

>Maybe those are still being reviewed by eBay. Were they advertised as
>"CB" equipment? If so, how could they be used legally by non-hams? If
>they were intended for hams, why were they in the "CB" section of
>eBay?

Go into the ebay listings for 'Ham Radio' and perform a search for CB. The fact is that people put their stuff all over the place, especially if they're related i.e. CB & ham RADIOS. Heck, I even found an auction for a pair of boots under the CB listings. :-D

>Well if an individual advises people to use deception to get around
>FCC rules and eBay policy in order to sell illegally modified CB
>equipment then I would have to say they are condoning illegality.

So the statement of facts now becomes "advising." Gee, I suppose all these newscasters that are reporting on the various methods of biological terrorism are now "advising" others how to do it. What is this, Fahrenheit 451? I wante to say "nice try," but it wasn't even.

>Oh yes, the old "they own it but don't transmit with it" excuse. It's
>BS and you know it.

Aaron, I still own "export" and 10/11-meter radios. I haven't transmitted with them. Wake up, Aaron. You're generalizing to fit your own views. Broaden that view and realize that there is such an animal as the EX-freebander. I've got a nice Pesident Lincoln hooked up to a Ten-Tec transverter, that illegal too? Oh yes, I know what's BS.

>No, you would never actually come out and say you planned to take over
>Upper Muldovia.

That's why there's a bumper sticker on my car, which also has AR vanity plates. I don't appear to be the type to stand (...not hide.) behind my words, eh Aaron?

>But I wouldn't be surprised if you secretly funded
>Anti-Muldovian rebel forces...

Kinda cute bit I'm still going to buy that Ten-Tec 2/6m rig rather than the RCI-5054. Ten-Tec is well known for proactively preventing their rigs from being used illegally. I don't even think they'll sell their gear without seeing a license. To receive the 10/12m modification for their amps, you must provide Ten-Tec with a copy of your General or higher ticket. This is the forces, I'm

supporting, Aaron. You're just having trouble identifying the real Muldovian troops. I'm extending an olive branch, Aaron. These issues are better discussed when lightening up a bit. This reply was almost fun. Take it easy.

I am not a criminal therefore do not slander me sir . You seem to want to
tell me
you are confident of yourself. Why do you wish me to know this ?. What drives
you ?
Possible that you are far from confident of youreslf prob sexual malfunction or
other
abnormalities in your social life that drive you like a wild animal frothing at
the mouth.
You speak of issues in which I am not involved nor knew anything about Those
issues
must bother you as I have no connection but you wanted to fill me in about
them.
Your life has very little meaning it seems form the actions you have taken. DO
you
toss and turn at night ? Dream of high powered mobiles
messing up your phone ? Have we see your compulsive
disorder in full force or is there anohter lvl in which we have
not seen yet ? Answer anytime in which you would like to
talk about those issues before you. Sir you seem to be
caught up in the Drama and I would suggest psycological
help. Telling me what has been going on as if it matters
to me seems a bit strange. Who have I threatened ? You
are the one who slanders not I . For your own personal refrence
I do not have to try and analyze . To say that I am owned
is another key point to your psycological profile sir. You want
power so much you are trying to convince people who basically
care not what you say that you control them. That is a disorder
that can be treated though would take some time. Have faith and
you will be fine. Your perception of reality how warped is your own
perception of reality. Rest asure that medication can help with
the delusional problems. I sir would bet that you have a
neurological problem. You may fool many people here
but that does not change the fact that everyone can be
profiled and you sir need some psycological help and
medication. Another reason is that do you realize you
say you are laughing when I have not told a joke. Either
your sense of humor is quite warped which considering
your mental issue could be that factor for the problem you
have If you would like I can provide names of
psycologists in the field that deal with neurological
damage. Have faith and remain calm. I am sure you
will be fine.

Your asprin

Hi again Danny,

There's a fellow in FL that stocks all sizes of stainless steel (I spelled it right this time.) u-bolts and they come with saddles as well. (Saddles help disrtibute the load. A very good thing.) In the back of AR magazines is a classified for Harbach Electronics. Since the antennas going up quickly, I don't think you have enough time to order. The marine store will have the split lock-washers that go between the sections though. Definitely replace those. Good luck.

I read responses from Toll Free before and also heard from others, Jay, thatyou would have to do considerable upgrades to the amperage upgrade to get enough upgrade to make a difference on those. I've seen people add a second tube, but not enough current and amperage there to support much upside unless you put an upgraded external transformer and do some other mods. Keep the Dx300 and use it to drive a bigger unit. Really clean driver!!

Bert, your nothing more than a Cber with a No-code Ham license.

"I was hooked. (and technically a FCC rule breaker at 15 yrs. old)"

"You're not one of those dopey CBer's, are yuh?" (That was from the friendliest of the bunch!) Thus ended my first encounter with amateur radio. I should've shrugged it off, but I was young and it had a polarizing effect

Hey Train and everybody else in the LI, NY metro area; the Oyster Bay Oysterfest is today. I casually mentioned wanting to go to my wife and she reminded me that it's today. Damn, if I didn't lose track of the time. I'll list a couple of links and give Mark a "landline."

http://liquid-silver.net/obfest/weather.htm

http://www.oysterbayli.com/html/oysterfest.htm

Train, you go over the GWB to the Cross Bronx Expressway., over the Whitestone or Throgs Neck bridge to the Cross Island Parkway. Then exit onto the Grand Central Parkway or Long Island Expressway heading east and follow the directions below.

To reach the the heart of Oyster Bay by car, take the Northern State Parkway to Exit 35N (Route 106/107) or the Long Island Expressway to Exit 41N (also Route 106/107). Take the right fork, Route 106 -- the Jericho-Oyster Road, north toward Oyster Bay, for approximately six miles

It was especially clever how they managed to infiltrate the Arab radio
stations at the time, and urged the Arabs to get out so that their Arab
brothers would do a cleansing, and then come back to take over everything.

The standard voltage for batteries used on computers to hold memory information is 3.3 volts. This will likely work just fine. The original at 3.5 volts probably kept you going until it got down to less than 2 volts. check the old one now and find out how low the voltage fell before it refused to hold memory. Cherck with W&W for an axial lead battery if you have to solder one back in, but having an easily replaceable battery is a plus.

Genocide2RF357 wrote:

1317. Re: interference from the users of CB radio equipment - intruders on VHF and UHF satellite bands

Newsgroup: rec.radio.cb
Date: 2001-10-14 19:09:10 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <KAly7.61525$WX5.1823650@e3500-atl2.usenetserver.com>
Source record: 100329

Well,

Leland, while we don't necessarily agree on the tactics used in arguing legalities
on the newsgroups, I can say that this IS pretty well on the money. While there
are those who feel that their activities, particularly those outside the allocated CB channels, do no harm, it is, nonetheless, a matter of international concern.
The fact remains, such interference caused by illegal stations DOES cause harm, and attracts negative attention. And when entities whose communications
are interfered with become agitated enough, the International Treaty organiza-
tions hear PLENTY about it. Indeed, when those who would attempt to change national and international laws concerning CB attempt to do so, the door gets quite literally slammed in their faces no matter how polite, no matter how "convincing" their case. Whether it is admitted or not (and it won't be by
those to whom illegal operations is sacred), it is that very activity that gives CB
a black eye and prevents it from from sharing in the spectrum "pie", or getting
limits removed, or increasing power, or increasing channels, etc. Again, I don't
think constantly haranguing the folks that do it, or having flame fests with each other does any good at all. That said, it still gets that door shut tight everytime.
I mean, put the shoe on the other foot. Imagine if it were YOU that were being
interfered with. Would you not be upset? I would, and I AM upset to hear un-
licensed stations where they have no right to be. When I attempt to use frequencies outside CB (USAF below 27 MHZ and 10 meters), only to hear some LOUD, PROUD export radio complete with echo and that beep stuff, do I not have reason to be angry?

The wheels of justice and fairness often move slowly, but they are turning and
will turn faster as time goes by. Those who are up in 10 meters, it's just a matter of time. Pressure is being placed on Mexico to crack down on the illegal
stations down as well as other nations who are signatory to the treaties.

It will
take time, BUT those frequencies WILL be defended. I betcha!

==>IARU REGION 2 CONFERENCE CONCLUDES

The International Amateur Radio Union, Region 2, held its 14th General Assembly in Guatemala City, October 1-5. Twenty-one IARU member-societies from throughout the Americas were represented.

Heading the ARRL delegation was President Jim Haynie, W5JBP. He was assisted by First Vice President Joel Harrison, W5ZN, and staff members David Sumner, K1ZZ, Paul Rinaldo, W4RI, and Jon Siverling, WB3ERA.

Among other actions, the conference:

* Asked the IARU Administrative Council to study other ways to reduce interference from the users of CB radio equipment, particularly in the 10 and 12 meter bands.

* Expressed concern about unauthorized operation in the amateur VHF and UHF bands and encouraged member-societies to take appropriate action, particularly against continuing commercial interference to amateur satellite uplinks in the 2-meter band.

==>AMSAT-NA SYMPOSIUM DRAWS A CROWD IN ATLANTA

Amateur Radio satellite enthusiasts from around the US--and a few from abroad--converged in Atlanta October 5-8 for the 19th AMSAT-NA Symposium and Annual Meeting. The event attracted approximately 150 amateurs, who heard presentations on a wide range of amateur satellite-related topics.

The problem of interference from non-amateur intruders on VHF and UHF satellite bands was a topic raised in more than one forum during the weekend. The majority of the interference--particularly on 2 meters--has been blamed on taxicab operations in Mexico. "This particular source is Mexico," Soifer said. "It's been pretty well documented." Some conference participants said individuals using amateur gear as a personal communication service also are to blame.

Soifer, who chaired a VHF-UHF committee during the just-completed International Amateur Radio Union Region 2 Conference in Guatemala, said the issue got "quite a bit of attention" during conference. He advised a "use it or lose it" approach to combating interference. All agreed that reporting any intruders promptly to the IARU Monitoring System <bprice@arrl.org> would be beneficial.

During the Symposium's IARU forum, Soifer reported that Region 2 IARU member-societies were urged to report such interference to their national administrations. In Mexico, complaints already have been registered with COFETEL--the Mexican Federal Telecommunications Commission--and AMSAT has been prompting the amateur community to report such interference when they

monitor it. "The idea is to keep the pressure up on Mexico," Soifer said.

AMSAT Treasurer Art Feller, W4ART, agreed. "The more noise that gets made . . . the more likely it is to get attention," he said. "So, report, report, report!"

IARU Satellite Adviser Hans van de Groenendaal, ZS6AKV, said keeping the bands active and reporting and documenting intruders help to keep interference away and lessen demands on amateur spectrum. "It adds to the ammunition that the IARU can use at the various conferences," he said.

You KNOW that using excessive power on CB is anti-social behavior.
Plus it's illegal. Are you guys dense?

-Aaron-

RULE 10 - Power Output
{A} Your CB station transmitter power output must not exceed the
following values under any conditions:
AM [Amplitude Modulation] - 4 watts carrier power [CP]
SSB [Single Side-Band] - 12 watts peak envelope power [PEP]
{B} If you need more information about the power rule, see Part 95/
Subpart E.
{C} Use of a transmitter which has carrier [CP] or peak envelope power
[PEP]in excess of that authorized voids your authority to operate the
station.
RULE 11 - Linear Amplifiers
{A} You may not attach the following items (power amplifiers) to your
type-accepted CB transmitter in any way:
[1] External radio frequency [RF] power amplifiers, also called linear
amplifiers, or linears;
or
[2] Any other devices which, when used with a radio transmitter as a
signal source, are capable of amplifying the signal.
{B} There are no exceptions to this rule and use of a power amplifier
voids your authority to operate the station.
{C} The FCC will presume you have used a linear or other external [RF]
power amplifier if-
[1] It is in your possession or on your premises; and
[2] There is OTHER EVIDENCE that you have operated your CB station
with more power than allowed by CB Rule 10.
{D} Paragraph C above in this section does not apply if you hold a
license in another radio service (HAM, etc.) which allows you to
operate an external RF power amplifier.

Hello Mobile 51: Yes thanks for the reply there.

Some how I got in in my simple mind that the DX-1000 had two each of the 4CX250 tubes, some more than a few brain bits got dumped, or the "More Power" vain is larger than most, what do I know?!?!?!?!?

I got a bunch of e-mail answering the question, which I am thankful for, thanks guys.

I have seen the Palmar 300 chrome dome amps, modified, with a pair of the 4CX250's in the main chassie, and a large blower on the back, with a separate power supply, the front panel had two meters, and completely redesigned, looked bitchen! But of course I didn't buy, I out smart my self a lot.

Thanks.

So why "go illegal"? Mods to the radio are prohibited by law. Plus
they gain you nothing on the air and in some cases can cause your
signal to go outside of the band.

This is an interesting situation because it is typical of so many
CBers. And I understand how many feel that tinkering with your rig is
OK because tinkering is what the radio hobby is about. Only problem is
that CB is not meant to be the no-rules shortcut to ham radio.

Hey wait a minute. I thought you ascribed to the idea that CB is a
fertile field of potential hams so in order to harvest that field you
should wink and nod and smile at those using illegal linears and
outband frequencies in order to appear as a friendly equal and not a
"mean old ham".

So if you say you support legal operaton yet "look the other way"
about linears and freeband, what would make you so different from what
you say "CB Web" is doing?

> >There are lots of regular
> >posters in here who say they do not approve of illegal operation yet

> No, they make no pretenses.

The question is not "have you seen Mr. Coily antennas?". It is "Do you
think all this "for education purposes only" and "listening only" and
"not legal for CB (wink wink)" you see in the illegal CB world is
hypocrisy?

In my heart I want to believe Bert has the best of intentions, and in
any case I wouldn't look down on him because he hasn't passed a code
test.

Problem is that there exists a subculture of licensed hams who do not
yet have HF privileges. In the meantime they use 'freeband' DX as a
substitute. This is just plain wrong.

> "I was hooked. (and technically a FCC rule breaker at 15 yrs. old)"

If you are talking about typical kid behavior like playing music into
a 100 miliwatt walkie-talkie, that is one thing. But today's
rule-breakers have NO LIMITS and it's pretty easy for a kid to be
influenced by an illegal peer group who have made rulebreaking into an
underground hobby.

> "You're not one of those dopey CBer's, are yuh?" (That was from the
> friendliest of the bunch!) Thus ended my first encounter with amateur radio.
> I should've shrugged it off, but I was young and it had a polarizing effect

Can you blame the hams? The typical CB "king of the hill" game is
antithetical to what ham radio (at its best) is about. They listen to
CB and get disgusted. They fear that CBers will bring that sort of
thing to their bands.

Instead of HAMS bending over backwards in order not to spook CBers why
can't CBers bend a LITTLE to be more understanding of hams POV? I bet
if you approached that crochety old ham and told him you thought bad
CB behavior was dumb and you wanted help getting into ham radio his
tune would change.

1345. AKC Question

Newsgroup: rec.radio.cb
Date: 2001-10-14 20:51:08 UTC
From: dweebospanka@aol.com
Message-ID: <20011014165108.08579.00007315@mb-md.aol.com>
Source record: 100406

Hey AKC's, I got the rooms booked for us! All sharing connecting doors! Woo Hoo! Party time!

I checked the website, and found out there is going to be a memorial for those of us who have fallen to AIDS. I'm sure you guys will want to attend, so I'll set that up for us as well. I was thinking that we could get together and make an AntiKeyClown quilt.
It can't be too big though, as there aren't but 5 of us left, and it shouldn't take too long to make. I have most of the material already....left overs from the last one we made. When we finish though, we do need to take the time to use protection....that last orgy we had just happened too quickly and we were all drunk.(again<g>) Besides, we have to remember that it's up to us to stop the spread of AIDS. Doug, I know you and Leland tested positive, but I have not.(yet)

You guys call Me!

AntiKeyClowns Rule!!!!!!

Jerry that is the crux of the problem, most of the illegal operators feel their operations are not bothering anybody because they have yet to hear about it. However by the time they do the damage is beyond the point where anybody wants to "negotiate" a solution. The second point is pirate activity is not confined strictly to HF, and thus the reason why Hams of all license classes have a stake in all of the "DC to Day Light" frequencies whether they use them or not.

On the AMSAT private BBS E-mail list there are several Hams from Japan who wrote about the huge problem they have with truck drivers operating on both the 2m and 70cm Ham bands there! One commented further that future satellite designs may have to abandon those two bands as up-link/down-links because of the volume of illegal activity. Other posters have commented about deliberate jamming and or usage of the Amateur Satellites by pirate operators in various parts of the world as well.

Many of the more smug posters on this news group feel they have nothing to worry about, but they do. As you can see from the posted material the issue of illegal activity is now moving up to the level of international attention of multiple Radio Groups along with pressure being applied to the regulatory branch of each affected government to crack down on the problem. Sooner or later the FCC is going to get very serious about the illegal activity here too. And that pressure may come just as well from other countries, where their local radio users are sick and tired of the out of band, and over powered signals originating from here in the USA.

I'm also surprised at the self-serving ignorant comments I read in several columns in the November issue of "Popular Communication" regarding the FCC's denial of the RM-9807 petition. None of those columns addressed the fact that the USA has to abide by the ITU

treaty requirements for access to frequencies below 30MHz. The exact same requirement that prohibits Ham Tech Class licensees from using HF, the CW requirement, also applies to CB Radio. The dodge is the low power limit on the equipment, about the same as the low power requirement for non CW tested Hams in Japan from my understanding, when operating on HF. The second problem as I had mentioned in a prior post, and expanded upon by Richard, is the Third Party Traffic Rule. Both of these issues really left the FCC with little choice to deny the petition. So if CBers want to DX on 11m then they have to make sure that their desire to do so, if granted by the FCC, does not violate any ITU treaty provisions. Right now that does not appear to be the case.

With the current illegal activity on and around the 11m band the FCC is going to have to clamp down to bring the USA in to conformance with the ITU treaty requirements whether they feel like it or not. And with the rapid grown in wireless services people are going to be paying more attention to so called "invaders" in to neighboring services a lot more closely. Spectrum is a limited resource and legitimate users are not going to give it up freely. What one group takes another has to lose either in spectrum access or increased potential for interference, and maybe both.

Mike:

There probably are, however FM is not authorized by the FCC for use on CB.. What you probably have is a converted "export" radio, which was initially designed for 10 and 12 meter HAM operation, and was converted by a third party or yourself for use on CB. While these radios aren't technically "legal", many people use them. Your best bet, if you wish to use this radio, would be to keep the modulation below 100%, and stay off FM. If you do these two things, you may get by for years using that radio on CB frequencies.. Personally, I'd suggest you sell that one, and get yourself a Grant LT or a comparable set, have it tuned by a qualified, licensed tech for optimum operation within the FCC CB rules, set up a good, efficient antenna system, and be happy with it.

The extra few watts your "export" set gives you won't help you "get out" any further, and can cause you more grief than good. Really, is 21 extra watts really worth $10,000 each time you're caught transmitting with it?

Note to everyone else:
If you think I've jumped the fence and gone AKC, you're wrong. I'm not flaming this guy. I'm not cramming regulations down his throat. I'm not telling him not to use his "new radio"... I'm simply passing on information that he might find useful.

There are parts of the world where Ancient Modulation is illegal and FM is required, notably in Europe. Being the oldest CB in the world, the US did not get to learn the lessons or enjoy the development of FM that they learned from us.

You may also have one of those '10 meter' rigs ostensibly sold to Amateurs, wink-wink. As it happens, FM is used in the 29.5-29.7 part of the band. On other ham freqs, FM is legal wherever AM is but the max 6kHz bandwidth reduces allowable deviation to about 1.5 kHz and no one is capable of copying besides other outlaws. BTW, if this rig is capable over 28 you are well advised to forget that fact; the heat is really coming on about piracy above 28.

If you do use the FM, throw your power mike as far as it will go. FM is receiver-dependent, so trying to be louder will make you unintelligible. This is the biggest reason FM is required; it is far more bozo-proof than Antique Mary.

SSB, Why do you need to defend yourself, good common sense information and following FCC Rules is what is expected, especially when you post your callsign after it. No one said you need to Join the AKC Resistance to be a legal Cb operator. Everyone does there part as they see fit, if that post is your contribution then it thats the role you undertaken and should in no way be Flamed or ridiculed.

Speaking of which, Jay? A friend of mine is looking to sell an amp with two
4CX350's that comes with a seperate power supply and all. I ain't buying it
because the wife 'er frown bigger than shit (if looks could kill, I'd be
ash). Interested? And tell Miss Dinah "when the hell are we gonna meet?"
Is she old as hell? Later Jay.

Well, I didn't post my call, but for those who are interested, it's
KC8RKQ.

I just didn't want AKC/N8/dweebizoid/Aaron/et.al. thinking I'm joining
their ranks. I'm not. While I agree that operating a CB within the FCC
rules is a good thing, I completely disagree with the aforementioned
group's tactics. I find them counterproductive to the goal of helping
CBers to run clean stations. I also feel that if I hadn't been guided as
I was before I was a HAM (5 months ago), I would have never gotten my
license in the first place.

I for sure wouldn't have gotten it if N8 and the AKC clan were around
when I was still learning, being the penii that I have seen them be.

The big question here now is this: Who are you? What's your call?

I appreciate the semi-vouch. IAG is two-thirds correct. I am a CBer (There's nothing wrong with that.) I am presently also a no-code ham. The "nothing more" part doesn't hold water though. Despite my past transgressions, I DO have the best of intentions.

>Problem is that there exists a subculture of licensed hams who do not
>yet have HF privileges. In the meantime they use 'freeband' DX as a
>substitute. This is just plain wrong.

No arguments there.

>If you are talking about typical kid behavior like playing music into

>rule-breakers have NO LIMITS and it's pretty easy for a kid to be
>influenced by an illegal peer group who have made rulebreaking into an
>underground hobby.

I was refering to my violation of the 155.3 mi. limit. I also replaced the h/t's fixed telescoping antenna with coax and an external quarter-wave dipole, a violation of Part 15. (I was only 13 yrs. old for that one.)

>Can you blame the hams?

I did this one. All he saw was an antenna, insufficient to make any pre-determinations.

>The typical CB "king of the hill" game is
>antithetical to what ham radio (at its best) is about. They listen to
>CB and get disgusted. They fear that CBers will bring that sort of
>thing to their bands.

I deplore generalizations, and thus the word "typical" applied to any social group. I do understand your point though and have been guilty of the same offense, hence, "I should've shrugged it off, but I was young and it had a polarizing effect."

>Instead of HAMS bending over backwards in order not to spook CBers why
>can't CBers bend a LITTLE to be more understanding of hams POV?

Why not both. I don't think it's unreasonable to attempt to meet somewhere in the middle. I've seen the approach work wonders.

>I bet
>if you approached that crochety old ham and told him you thought bad
>CB behavior was dumb and you wanted help getting into ham radio his
>tune would change.

Not all the legal CBers are like that. I think you will find that most of
those who give the serious abuse over illegal CB, are not CBers.

> 40 ch only 4 watt mud ducks and anyone who does not follow the rules is a
> bad bad person....

There is nothing wrong with running a legal 4 Watt radio with no extra
frequencies. I have met some great CBers.. both legal and otherwise.
You cannot judge a persons character by what CB equipment they use.

--
> most hams started in cb and then went to freeband ect. :-) If you
> got it run it! these keyclowns as you call them need a prozac or 3 and need
> to get off their high horse and stop crying everytime they see an amp
> posted for sale or a modified rig for sale.

It amazes me how openly illegal equipment is sold, even in the UK. One ads
magazine has always got plenty of private ads for illegal CB equipment.
Of course, there is a risk involved, but that is their problem. If the
authorities were really bothered then they could also pick up the free ads
papers, and start visiting.

Anyone who will spend all their time searching the net for illegal CBers,
just to give them abuse, report them, or both, is a rather sad person with no
life to live.
Look at the time they spend on here, then consider that they also spend time
searching E-bay for illegal equipment... there can't be the time left for
them to take a p**s, never mind actually have a life.

> >Amateur radio is intended for those who wish to enter the technical side
> >of radio at a hobby level
>
> I agree..but most of the "freebanders" are interested in the same thing but
> just don't want to get the ticket...

Over here, most of the "freebanders" are interested in DXing, and collecting QSL cards.

> I still have no problems with anyone running a box or running out of
> band...

As long as someone knows the situation, then that's their choice, and their risk. I have known people conned into buying illegal equipment, without knowing.

> the FCC needs to open up those out
> of band channels anyhow...from 25.005 to 27.995 anyhow and increase the
> power to 25 watts...I have talked world wide on 25 watts in the past..just
> a shame ya need the amp for LOCAL talk ...rofl

I do not know what the remaining part of 25.005 to 27.995 is supposed to be used for in your country. I really cannot see any country ever giving nearly 3MHz bandwidth to CB on the HF band alone.

Here we use 26.965 to 27.405 and 27.60125 to 27.99125. I suppose they could allow the frequencies between the two bands, but if it is already allocated, there would be time required to move other services.
The r/c frequencies for toy aircraft were moved some years back, as inteference from CB proved to be dangerous. There has been at least one case of a child being killed by a crashing toy 'plane.

I cannot not see CB being allowed 25 Watts, it is intended for short range communications. As the FCC refused to remove the 155 mile rule, I think we can count out any chance of them making that rule easier to break.

Regards,

Brainbuster.

Hi Bert,

I have not heard of that one, I am in central England.
I know most of the local DX groups, some have been going a few years now.
Clubs do come and go, as do CBers. Some CBers re-appear from time to time,
but very few of the original CBers from the 80s are still about.

Regards,

Brainbuster.

It is not easy to tell. An FM receiver in its last i.f. stage has a gismo called a limiter which removes amplitude variations. So put it on a crowded band and you will not hear a thing unless you open the squelch and perhaps not even then. On transmit, you should see a rock solid carrier with no amplitude variation whatsoever. If it has been stripped, you should see space for an FM detector board and probably some parts missing on the PC board on the transmit side including a deviation control. FMing a transmitter is actually fairly simple.

Odds are that the unit has some parts missing because AM and SSB are generally not legal where FM is required and vice-versa but it is a bit odd to put the option on the control and then ignore it.

Mind sharing what the unit is?

>Bert, In what way will lifting this limit enhance CB operators skills? Do
>you think it will make them better operators?

The ability to effectively work a DX pile-up is one of the best tools for those who enjoy working distant stations. (Particularly from exotic locations.) If the limit were lifted, it would allow licensed hams and/or experienced 11-meter operators the opportunity to legally demonstrate what can be accomplished with only 12 watts and some savvy operator skills to those who just don't know. I worked a JA station using the "tail-ending" technique lifted right from an issue of QST. She (Yes, she.) turned out to be stationed on Kadena AFB in Okinawa.

Yes, I do think it will make them better, not to mention more considerate, operators. It also helps reduce QRM while enticing some into AR rather than the "freeband." It's about attitude too.

Wow, brainfart, you are really obsessed!

If you did some -real- research on the topic you would find that the origin of my name is left only to speculation. The only thing that is known to be fact is that it originated with the Nordic invasion of Ireland.

Your focus on the only site that makes a correlation between 'Leland' and 'Gilliland' only shows that you still don't have a clue. I don't care if you operate legally or not. I don't care if you have never even seen a CB radio. I -do- care that you are too stupid to understand what other people say. So to make sure that nobody here ever takes you seriously, please continue on your current track, and you should be able to totally destroy your own credibility in a very short time.

Oh yeah, I forgot I'm in your killfile. Maybe you could learn a trick from the keyclowns: Just claim to put me in your killfile, and respond

to my posts using an alias. It almost worked for landcarp...

If the government made such a specific order, then there is probably
some reason behind it, and it's not moot. I think a better question
would be, "Would you ignore a law just because you don't understand it's
reason?"

> you think it will make them better operators?

If you don't mind, I would like a crack at this one. While I am not going to get worked up about something that is not going to change in my lifetime for reasons Bert will see when he takes Element 3 (the General written) there is one thing to be said in its favor: when the natural is illegal, the rules tend to get broken. When one rule is broken, there is no great reason to obey another and the result is either chaos or a police state. Governments if they are going to be sucessful cannot allow a significant body of illegal activity to exist without being viewed as impotent or ridiculous. Churches and totalitarians outlaw the natural and necessary because guilty people can be bled or arrested at will but in general regulation in a democratic state does ultimately require that the rules are followable, sensible, and necessary to the satisfaction of those being regulated. It is a two-way street.

So the question is whether outlawing skip shooting is necessary (it is for reasons not relevant here), sensible (depends on your POV), or followable which I submit it really is not. In a communications environment, yakking at others in East Nowhere is natural, fun, and damn near irresitable. It isn't legal anywhere in the Land Mobile Service -- which CB is under the treaty -- but outside of public safety services where people can die it is done all the time. The thrill of HCJB or Radio Havana the first time is not going to go away by regulation. DXing is a major activity among shortwave listeners and Amateurs alike; it is natural among the radioactive.

So eliminating the rule would instantly turn lawbreakers into law-abiding citizens again which might help them resist breaking a few more and somewhat more useful or critical regs.

There are barbarians in the world and one forgets that to his own detriment but by and large people are law-abiding and will follow standards for a shared service if the rules make a dime's worth of sense. Somehow we all make it to work in the morning in spite of idiots, morons, misfits and arbitrary traffic rules. As a practical matter, people drive to get somewhere at as little risk as possible so the speed limits tend to be set by traffic lites and collective judgement of the risks. All the nice aluminum plates bolted to the lite poles does not change the situation.

Many years ago a college I attended opened a new library. They took the simple way: paved a few obvious paths and returned a year later to pave the paths the students had made. Far easier and far more effective than laying

out the plan and trying to enforce it. And as the object of the game was to get students into the library a whole lot more sensible.

Dick N&#65533;BK

Because most of the butchers who are doing the mods don't adjust the s meter they tune for max wattage output, cut a few diodes and transistors and perhaps some turn a few pots that they aren't real sure what they do, some of the better techs will go over the rx section but this is usually only done by ear with an incoming signal.So no I don't think the normal guy who gets his hands inside of a CB even knows the correct way and or has the proper equipment, or specs to adjust the meter, nor do most really care. I mean when was the last time someone asked for the mod to adjust his s-meter?

> When you upgrade your call shouldn't change

There are two ways it can be changed (it doesn't have to but it can):

1. Upgrade. You get to have the FCC issue you a new one for free from the batch available for your license class. Generals get 1x3, Extras get 2x2s. No choice, just sequential. That is my story.

2. The Vanity program. You pay, you choose from what is available. He could get a 1x3 now even as a Tech.

Obviously you don't know what BB does, just keep telling them he don't! I don't need to list what I have won or if I had never won a thing! it doesn't make or break me, as a person or a competitor. I compete and that is what it is all about, if there are 10, 20 or 30 people there, 9, 19, or 29 of us go home the same way Like you! making up excuses why we lost. I have a blast no matter where I go, win, loose, or draw I compete! So get on the line and stop criticizing what everyone else is doing and make a name for yourself other then the one you made up for AOL.

Dick, perhaps we could do this for all the Marijuana laws, traffic laws, speedlimits, tax laws etc etc This would eliminate many lawbreakers in our society. Right Relax the rules. The problem Dick they break the rules as they are written now and are no better operators nor does it help get them into Ham radio anymore sooner, the only way the limit would help them get into ham is for them to want to do it legaly and to be a part of our law abiding society

>

You get the Lithium batteries anywhere.
Out here Walmart carries a variety. The
size is the key. The battery is ultra thin.
Take in th old one, size up the new. Most
of the batteries solder in so be careful not to overheat the battery and solder
the terminals to the battery. No sweat!
Many people have resorted to installing
a 2 wire extension from the terminals behind the display to the exterior of the
chassis and having a battery holder in a plastic sleeve on the exterior
(velcro'd) of the radio.
Easy to switch them out then. But they last a long time so this is really a
radical fix.

"If it aint broke, don't fix it"

Yes it is an automatic thing. When you upgrade you get a higher class
callsign unless you specifically ask to keep your old callsign. Higher
class licenses have less letters. Some choose to keep their old callsigns
though.

So Tim when are you going to get your Ham ticket and prove how smart you are? Then you don't have to bootleg on the Ham bands using my callsign anymore, or screw up by using it on the freeband. Remember what I told you about that.

comming from a 1 crystal walkie talkie on channel 14 to my yaesu or cobra 2000 into the texas star667v into the 4 tuber 3-500z heathkit is a nice move in the right direction if i dont mind saying so. as for moving on to other bands, i have the best of both worlds. i enjoy nice local talking at night with a reliable 125+ miles range and during the day i can work the world on dx. i used to be content walking on the locals on 19 with my old class c two pill and 2950 until i started to listen to the freeband and hearing the guys from all over the world talking and having nice qso's as easy as i was talking to the next town on AM. it was a wide awakening to me and ive rarely been on AM since and have worked over 200 dxcc's on 11 meters ssb, about 45 on cw and about 30 on sstv. not too bad at all for a single band considering i'm not active every day and usually only work on one freq.
